

Cheyenne/Laramie County Emergency Management

Emergency Operations Plan Summary

Albin, Burns, Cheyenne, Pine Bluffs

This plan is the revision of what was previously titled “Emergency Response Plan”. Necessary changes were put in the plan so EMA would be more in line with State Statutes and the National Response Framework. The new integrated Emergency Operations Plan for Laramie County and the cities/towns therein as a City - County Program. This plan supersedes any previous emergency management/civil defense plans promulgated by the county for this purpose. It provides a frame-work in which the departments of each city, town and the county can plan and perform their respective emergency functions during a disaster or national emergency.

This plan recognizes the need of ongoing Emergency Management Planning and Coordination by all jurisdictions of government within Laramie County. This plan attempts to be all inclusive in combining the phases of Emergency Management, which are: (1) Mitigation, (2) Preparedness, (3) Response, (4) Recovery, and (5) Prevention.

In summary, the plan covers the following:

Base Plan

Introduction to the plan

Vulnerabilities

Roles and Responsibilities for Senior Officials

Emergency Operations Center Operations – leadership & activation protocols

Public Information & Warning

Emergency and Disaster Assistance – State and Federal process

Emergency Support Functions (ESF)

This section defines and describes the coordination for the 15 ESF's (The Means), Lifelines (The Ends) and Core Capabilities (The Ways) in which we coordinate with all community partners during all levels of EOC activation for emergency response, Planning, and Training needs.

Incident Support Annex

The Incident Annex identifies and outlines specific incidents that have the highest probability of occurring within Laramie County. Each annex provides a description of each event, the effects it could potentially have within the county and an outline of roles, responsibilities, and coordinating efforts for each type of event.

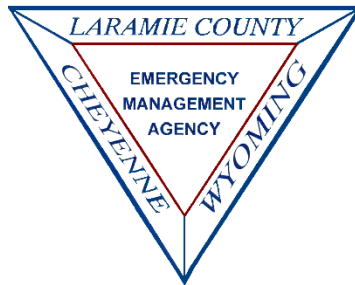

Support Annexes

The Support Annex Assistance Guide outlines specific tasks or functions that may be carried out during and after an emergency or a disaster. The guide describes, in specific detail, the operational system identified in the Cheyenne/Laramie County Emergency Operations Plan that will be used to carry out the functions listed.

Planning Annexes

The Planning Annex identifies specific plans within the ERP that may be utilized and followed during and after an emergency or a disaster. These annexes are designed to be the major support system for the EOC. These planning annexes play an important part in the needs of the affected jurisdiction to provide logistics, coordination, documentation, and help provide additional support to the incident.

PRIVACY STATEMENT

The disclosure of information in this plan could compromise the security of essential equipment, services, and systems of Laramie County or otherwise in part Laramie County's ability to carry out essential emergency responsibilities. Distribution of this plan in its entirety is limited to those associates who need to know the information in order to successfully activate and implement the Plan.

Due to the compilation of potentially sensitive data, this plan should be protected under the provisions of Wyo. Stat. §16-4-203(b)(vi). Portions of this Plan contain information that raises personal privacy or other concerns, and those portions may be exempt from mandatory disclosure under the Freedom of Information Act. See 5 U.S.C. §552, 41 C.F.R. Part 105-60.

Any decision to disclose information in this plan outside of Laramie County or to withhold information in this Plan from a non-Laramie County requester must be coordinated with the Cheyenne/Laramie County Emergency Management Director and the Laramie County Attorney's Office.

Cheyenne/Laramie County Emergency Operations Plan (EOP)

Effective Date: January 2024

To All Recipients:

Transmitted herewith is the new integrated Emergency Operations Plan (base plan, emergency support functions, incident annexes, support annexes, and planning annexes) for Laramie County and the cities/towns therein as a City - County Program. This plan supersedes any previous emergency management/civil defense plans promulgated by the county for this purpose. It provides a frame-work in which the departments of each city, town and the county can plan and perform their respective emergency functions during a disaster or national emergency.

This plan recognizes the need of ongoing Emergency Management Planning and Coordination by all jurisdictions of government within Laramie County. This plan attempts to be all inclusive in combining the phases of Emergency Management, which are: (1) Mitigation, (2) Preparedness, (3) Response, (4) Recovery, and (5) Prevention.

This plan is in accordance with existing Federal, State, and local statutes. It has been approved by Laramie County Board of County Commissioners and the Wyoming Office of Homeland Security. It will be revised and updated as required. All recipients shall advise Cheyenne/Laramie County Emergency Management Agency of any change that might result in the Plan's improvement, or increase its usefulness.

Record of Changes

In 2023 EMA staff determined the Emergency Response Plan (ERP) needed to be more uniform to how the state and other supporting counties are planning. The process to completely revamp the ERP and convert it to an Emergency Operations Plan (EOP) began in mid-2023 and continued into 2024. All sections of the plan received updates and in some cases, removed due to too much information or irrelevance. A list of more specific record of changes will be within the 2026 update in the table when less changes are made.

Cheyenne/Laramie County EOP – Base Plan

Introduction

The Cheyenne/Laramie County Emergency Management Agency takes a proactive role in potential disasters and emergencies, either natural or manmade, for the purposes of “Preparedness, Response, Recovery, Mitigation and Protection” of Laramie County and its citizens. This plan is designed to lessen, or in some cases, prevent loss of life and property during disaster situations.

The goal of the Cheyenne/Laramie County Emergency Operations Plan is to bring together a strong team of agency representatives whose early involvement in an event will expedite the coordination of local resources to assist an impacted area. With the assistance of this plan, the team coordinates the efforts of local services to restore, supply or re-supply local infrastructure and needs of the communities within Laramie County.

The Cheyenne/Laramie County Emergency Management Agency (CLCEMA) is tasked under Wyoming Statute § 19-13-101 et seq. for developing and implementing a crisis operations plan for coordinating local response to events. The Emergency Management Agency along with local first responders and emergency support functions have built this plan to assign responsibilities for carrying out essential support functions and event specific actions.

This plan is updated to ensure compliance with both the “National Incident Management System” (NIMS) and the “National Response Framework” (NRF), but more importantly the “Wyoming Response Plan” (WRP). The State of Wyoming will become our closest ally in times of crisis. They will provide a network of availability to both state level resources and assists in federal response when applicable.

This plan consists of a “Base Plan”, “Emergency Support Functions” (ESFs), “Incident Specific Annexes”, “Support Annexes”, and “Planning Annexes”. The Base Plan provides the initial “framework” for the government’s response to incident management. It follows “the Incident Command System” (ICS), allowing for expansion and contraction of the organization depending on the needs of the responders and complexity of the incident. The ESFs (listed later in the plan) are used to support the ICS and provide specific needs during an incident. The Incident Specific Annexes are detailed to a pre-determined event, being natural or manmade.

As a representative of government (elected or employed) or as a member of emergency services, it is imperative you know the content of the plan. You can and will play an important role in the government’s response to a large scale emergency or disaster. Your preparedness is an essential part of the successful implementation and outcome of this plan by providing the citizens with both “Continuity of Operations” and “Continuity of Government”.

Thank you,

Cheyenne/Laramie County Emergency Management Agency

Purpose

The purpose of the Cheyenne/Laramie County Emergency Operations Plan (EOP) is to establish a comprehensive, local, all-hazards approach to emergency incident coordination and management across a spectrum of activities including prevention, preparedness, response, recovery and protection.

The EOP incorporates best practices and procedures from various incident management disciplines—homeland security, emergency management, law enforcement, firefighting, hazardous materials response, public works, public health, emergency medical services, and responder and recovery worker health and safety—and integrates them into a unified coordinating structure.

The EOP provides the framework for local interaction with other local governments, state, and federal governments; the private sector; and other non-governmental organizations in the context of domestic incident prevention, preparedness, response, and recovery activities. It describes capabilities and resources and establishes responsibilities, operational processes, and protocols to help protect Laramie County from natural and manmade hazards including terrorism; save lives; protect public health, safety, property, and the environment; and reduce adverse psychological consequences and disruptions. Finally, the EOP serves as the foundation for the development of detailed annexes and procedures to effectively and efficiently implement local incident management activities and assistance in the context of specific types of incidents.

The EOP, using NIMS, establishes mechanisms to maximize the integration of incident-related prevention, preparedness, response, and recovery activities. The EOP will improve coordination and integration of federal, state, local, regional, private-sector, and non-governmental organization partners. It also maximizes efficient utilization of resources needed for effective incident management and critical infrastructure/key resources protection and restoration.

Scope

The EOP covers the full range of complex and constantly changing requirements in anticipation of or in response to natural and man-made disasters, emergencies, threats or acts of terrorism. The EOP also provides the basis to initiate long-term community recovery and mitigation activities. The EOP establishes interagency and multi-jurisdictional mechanisms for local government involvement in, and coordination of, emergency incident management operations.

This plan distinguishes between incidents that require only local coordination vs. incidents that require assistance from state and federal partners.

This plan is applicable to all local departments and agencies that may be requested to provide assistance or conduct operations in the context of actual or potential local emergency incidents. Coordination and response within this plan is in line with the interrelationships of the Emergency Support Functions (ESF), Core Capabilities, and Community Lifelines as identified within the National Response Framework. The EOP is applicable to incidents that may occur at sites under the control of Laramie County government and/or any jurisdiction within Laramie County.

Emergency Operations Plan Applicability

The EOP applies to all local departments and agencies that may be requested to provide assistance or conduct operations in actual or potential local emergency incidents. These incidents require a coordinated response by an appropriate combination of Federal, State, local, private-sector, and nongovernmental entities.

Situation & Assumptions

Situation

Laramie County sits on a plateau in the southeast corner of Wyoming, covering an area of 2685 square miles. Elevation varies from 7000 feet at the western boundary to 5000 feet at the eastern boundary (Cheyenne-6082 ft.; Pine Bluffs-5042 ft.). The area is mostly “High Plains” grassland with a total of 8.3 square miles of surface water.

Laramie County has a total population of 100,723 (2022 Census Data) with a labor force of an estimated 49,175. Most lands are privately owned with agriculture as the primary use. The assessed valuation is \$1.5 Billion with total taxes levied of \$102 Million.

Average per capita income is an estimated \$341,104. With three levels of government in the county, the majority of employment is government or government related.

Laramie County’s demographics are quickly changing as Cheyenne and the surrounding county grows. Light industrial areas are growing, bringing in larger businesses. These businesses bring employment making residential subdivisions and business parks grow, causing both the city and county population to expand.

Cheyenne is a regional transportation hub. Cheyenne is a main hub for the Union Pacific Railroad (UPRR) that still uses the same east-west route laid out in the 1860’s. Cheyenne sits at the intersection of two major interstates, I-25 and I-80, which results in large amounts of truck traffic flow through the county.

The Federal Government plays a major roll for Cheyenne and Laramie County. Located adjacent to Cheyenne is F.E. Warren Air Force Base, a nuclear missile facility that maintains and operates the Minuteman missile sites located throughout the region. The Federal Courts, U.S. Marshall’s Office, Bureau of Land Management and Internal Revenue Service all have offices located in Cheyenne.

Population centers for Laramie County include: (Estimated as of August 2020)

Cheyenne 65,312	Unincorporated 30,661	Pine Bluffs 1,200
Burns 301	Albin 190	

Laramie County does not provide water or sewer infrastructure for most residential areas with the exception of the South Cheyenne Water and Sewer District. Water for this district is purchased from the Cheyenne Board of Public Utilities. Most county residences use private well and septic systems.

County electric utilities are provided by local grids managed by a private utility company and a Utility Coop in the eastern portion of the county. The smaller communities of eastern Laramie County have limited utility infrastructure using well water systems and either waste collection ponds or private septic systems.

Cheyenne/Laramie County Emergency Operations Plan

Cheyenne's infrastructure is multi-faceted. Cheyenne's electricity is supplied mostly from the south out of Colorado supported by a redundant grid system. Water is supplied by pipeline from the mountains west of Laramie, Wyoming to a new water treatment plant and supplemented by numerous wells. Natural gas is supplied from several pipelines to a local distribution system. Sewer treatment facilities located east of town are secured and controlled, as is the water treatment plant.

Emergency services in the City of Cheyenne and Laramie County are provided by numerous fire protection districts and municipal fire services, government law enforcement and both contracted and volunteer EMS providers. F.E. Warren AFB and the Wyoming Air National Guard also provide full time fire and airport protection services. Several industrial units, such as Holly Frontier Oil Refinery and Dyno Nobel give specific assistance to the emergency responders through mutual aid agreements. Both state and federal law enforcement agencies can, and do, assist locals when needed.

Cheyenne and Laramie County has experienced two large scale disasters requiring assistance from both the State of Wyoming and the Federal Government. Both the tornado of 1979 and the flash flood of 1985 proved to be deadly storms that demonstrated the need for this plan.

Assumptions

The EOP is predicated on a realistic approach to the problems likely to be encountered in Laramie County during major emergencies and/or disasters, therefore:

1. Laramie County and its cities and towns will continue to be exposed to the hazards identified in this plan as well as others which may develop in the future.
2. An emergency or disaster may occur at any time of the day or night, weekend or holiday with little or no warning and may affect more than one jurisdiction.
3. Local government officials, both elected and appointed, will, to the best of their abilities carry out all responsibilities regarding public safety and the protection of property. These responsibilities include attention to all phases of emergency management and provisions to ensure the continuity of an effective, constitutional form of government.
4. Disasters may affect citizens in a larger geographical area near Laramie County. Resources from all levels of government could be utilized to combat injury and death to a larger area.
5. Incident management activities will be initiated and conducted using the principles of the Incident Command System (ICS) and the National Incident Management System (NIMS).
6. Incidents could result in numerous injuries, fatalities, displaced victims, property loss, disruption of normal life support systems, essential public services and basic infrastructure and significant damage to the environment.
7. Incidents could overwhelm the capabilities of the local first responder network causing the need for assistance from state and federal agencies.
8. Some citizens will ignore, not hear, or not understand warning of impending disaster broadcast from media or local warning systems.
9. Although warning systems may be operational they may not be heard by all citizens.
10. Incidents are managed at the lowest possible geographic, organizational and jurisdictional level.

Hazards and Vulnerabilities

The following information and table is taken from the 2023 Wyoming Region 7 Hazard Mitigation Plan. It shows risk and vulnerability for Laramie County and all its communities.

Results and Methodology

Using existing hazards data, plans from participating jurisdictions, and input gained through planning and public meetings, the HMPC agreed upon a list of hazards that could affect Laramie County and/or the City of Cheyenne. Hazards data from FEMA, the Wyoming Office of Homeland Security (including the 2021-2026 Wyoming State Hazard Mitigation Plan), the National Oceanic and Atmospheric Administration, the Spatial Hazard Events and Losses Database for the United States (SHELDUS), and many other sources were examined to assess the significance of these hazards to the planning area. The hazards evaluated in this plan include those that have occurred historically or have the potential to cause significant human and/or monetary losses in the future.

In 2016 the State of Wyoming determined Mitigation Planning throughout the state would become regionalized and therefore combining all Region 7 hazard mitigation plans which include Laramie, Goshen, and Platte Counties. Within the regional plan each county's hazards are individually identified and identified as a whole for the jurisdiction. Members of the HMPC used a hazards worksheet to rate the significance of hazards that could potentially affect the participating jurisdictions. Significance was measured in general terms, focusing on key criteria such as the likelihood of the event, past occurrences, spatial extent, and damage and casualty potential. Note that the significance of the hazard may vary from jurisdiction to jurisdiction.

Hazard	Laramie County	Albin	Burns	Cheyenne	Pine Bluffs
Cyber Hazards	High	High	Low	Medium	Medium
Dam/Levee Incident	Medium	Medium	Low	Medium	Low
Drought	Medium	Medium	Low	High	High
Earthquake	Low	Low	Low	Low	Low
Flood	Medium	Medium	Low	Medium	Medium
Hail	Medium	Medium	Medium	Medium	Medium
Hazardous Materials	Medium	Medium	Low	Medium	Medium
Landslide	Low	Low	Low	Low	Low
Lightning	Medium	Medium	Low	Low	Medium
Public Health Hazards	Medium	Medium	Low	Low	Medium
Tornado	Medium	Medium	Low	Low	Medium
Wildfire	Medium	Medium	Low	Low	Medium
Wind	High	High	Low	Low	Medium
Winter Storm	Medium	Medium	Low	Low	Medium

Table 2: Laramie County Hazards Identification & Significance Worksheet

For more information and data refer to the January 2023 Wyoming Region 7 Hazard Mitigation Plan.

Disaster Declaration History

As part of the hazard identification process, the HMPC researched past events that triggered federal and/or state emergency or disaster declarations in the planning area. Federal and/or state disaster declarations may be granted when the severity and magnitude of an event surpasses the ability of the local government to respond and recover. Disaster assistance is supplemental and sequential. When the local government's capacity has been surpassed, a state disaster declaration may be issued, allowing for the provision of state assistance. Should the disaster be so severe that both the local and state governments' capacities are exceeded; a federal emergency or disaster declaration may be issued allowing for the provision of federal assistance.

The federal government may issue a disaster declaration through FEMA, the U.S. Department of Agriculture (USDA), and/or the Small Business Administration (SBA). FEMA also issues emergency declarations, which are more limited in scope and without the long-term federal recovery programs of major disaster declarations. The quantity and types of damage are the determining factors.

A USDA declaration will result in the implementation of the Emergency Loan Program through the Farm Services Agency. This program enables eligible farmers and ranchers in the affected county as well as contiguous counties to apply for low interest loans. A USDA declaration will automatically follow a major disaster declaration for counties designated as major disaster areas and those that are contiguous to declared counties, including those that are across state lines. As part of an agreement with the USDA, the SBA offers low interest loans for eligible businesses that suffer economic losses in declared and contiguous counties that have been declared by the USDA. These loans are referred to as Economic Injury Disaster Loans.

Roles and Responsibilities

A mayor, city representative, county commissioner or elected official, as a jurisdiction's Chief Elected Official (CEO), is responsible for the public safety and welfare of the people of that jurisdiction. The local CEO is responsible for coordinating with Emergency Management and local resources to address the full spectrum of actions to prevent, prepare for, respond to, and recover from incidents involving all hazards including terrorism, natural disasters, accidents, and other contingencies dependent upon State and local law. A CEO has extraordinary powers to suspend local laws and ordinances, such as to establish a curfew, direct evacuations, and, in coordination with the local health authority, to order a quarantine. Officials may provide leadership and play a key role in communicating to the public, and in helping people, businesses, and organizations cope with the consequences of any type of domestic incident within the jurisdiction. Officials also negotiate and enter into mutual aid agreements with other jurisdictions to facilitate resource-sharing; and requests State and, if necessary, Federal assistance through the Governor of the State when the jurisdiction's capabilities have been exceeded or exhausted.

Concept of Operations

It is the responsibility of local governments to provide the necessary oversight and directions when assisting with the management of emergencies in order to protect life and property from the effects of hazardous events. The Emergency Management Agency (EMA) is statutorily in place to assist all jurisdictions within Laramie County, and their CEO's, with the development and implementation of a comprehensive plan for emergency operations. EMA acts as the agent in leading the emergency management program; activating and applying the EOP as an operational and policy guide for any emergencies or disasters.

Cheyenne/Laramie County Emergency Operations Plan

This plan is based upon the concept that emergencies begin and end at the local level. The emergency support functions, performed by various groups responding to an emergency, will coordinate together under the Lifelines concept to ensure planning and response efforts are being met to the best of their ability. All levels of emergency services will utilize both the “Incident Command System” (ICS) and the “National Incident Management System” (NIMS) to prepare for and respond to an emergency or disaster.

A comprehensive emergency operations plan is concerned with all types of hazards that may develop in the community. As shown below, it addresses a comprehensive approach to emergency management including the 5 Phases of Emergency Management.

Mitigation: Mitigation activities are those that eliminate or reduce the probability of a disaster occurring. It also includes those long-term actions that lessen the undesirable effects of unavoidable hazards.

Preparedness: Preparedness actions serve to develop the response capabilities needed in the event an emergency should arise. Planning, training and exercises are among the activities conducted under this phase.

Response: Response is the actual providing of emergency services during a crisis. These actions help to reduce casualties and damage, and speed recovery. Response activities include warning, evacuation, rescue, and similar operations.

Recovery: Recovery is both a short-term and long-term process. Short-term operations seek to restore vital services to the community and to provide the basic needs of the public. Long-term recovery focuses on restoring the community to its normal, or improved, state of affairs. Examples of recovery actions include restoration of non-vital government services and reconstruction in damaged areas. The recovery period offers an opportune time to institute mitigation measures, particularly those related to the recent disaster.

Protection: The capabilities necessary to secure the homeland against acts of terrorism and manmade or natural disasters.

When an emergency occurs and exceeds the capability of the local government response agency(s), EMA, with notification to the local CEO, will contact other local incorporated city/town policy groups and request available response resources in order to manage events. When the emergency exceeds all resources within Laramie County, EMA is tasked to request support through neighboring EMA jurisdictions and/or the Wyoming Office of Homeland Security. If the events goes beyond the capabilities of the state, the state will then request support and resources from the federal government. Federal assistance usually is extended to aid in recovery from major disasters.

Direction and Control

The final responsibility for all emergency management belongs to the Laramie County Commissioners and the elected officials of the jurisdiction(s) affected by the emergency. These officials are the decision making group for all policy level decisions and are the executive head of the emergency service coordinators and EOC staff. During response operations, the members of the policy group will act in concert and advise/direct the activities of the entire response organization through the EOC emergency service coordinators. They will also be available to constituents to address non-routine matters.

The Cheyenne/Laramie County Emergency Management Director is responsible for coordinating the emergency management program. They will make routine decisions and advise the Policy Group on alternatives when major decisions are required of that body. During emergency

Cheyenne/Laramie County Emergency Operations Plan

operations, they are responsible for the proper functioning of the EOC and its staff. The Director also acts as liaison with other local, county, state and federal emergency management agencies.

Specific persons in departments/agencies are responsible for fulfilling their responsibilities as stated in this Base Plan, Lifelines/ESFs, and the Annexes thereto. Department supervisors will retain control of their employees and equipment during response operations. Standard operating procedures are required of each department having responsibilities in this plan. These SOPs must include:

- Recall of personnel during non-duty hours.
- Prioritization of tasks to guide recovery work.
- Procedures to be followed which deviate from normal.
- Specific emergency authorities that may be assumed by the designated successor during emergency situations.

Local governments have the overall responsibility for the direction and control of event operations within their jurisdiction. Local governments and state agencies should coordinate to ensure tasks and responsibilities are not assigned that conflict with other directives.

During disasters or large emergencies, the County Commissioners and/or the elected officials of the affected jurisdiction can:

- Order the activation of the EOC.
- Coordinate with the Operations Section Chief, Emergency Manager, the EOC staff and the disaster site during emergency operations.
- Determine the level of EOC operations needed to mitigate the emergency.
- Prepare and issue a local disaster declaration prior to requesting outside assistance for restoration and recovery.

During some periods of an emergency, department supervisors will be required to remain in the EOC and direct their departments from that facility. During any large scale emergency, the EOC will in fact become the seat of county/city government for the duration of the crisis.

Support positions for the elected officials are:

- Cheyenne/Laramie County Emergency Manager
- City/County Attorneys
- Public Information Officer
- City/County Risk Managers
- City/County Clerks
- Human Resources Manager
- City/County Treasurers

Continuity of Government Operations

Each agency is responsible for developing and maintaining an agency Continuity of Operations Plan (COOP). COOPs should provide standard operating procedures necessary for dealing with emergencies and disasters that could result in the following:

- Direct harm or impact to an agency's personnel, facilities and equipment.
- Interruption and resumption of critical infrastructures of local government.
- Request for support to another impacted agency.
- Loss or damage to vital records.

The COOP and supporting documents should include the following:

- Protection of personnel and property, including warning and evacuation and accounting for the whereabouts of personnel.
- Swift assessment and reporting to elected officials of the impact on personnel and facilities.
- Notification or recall of personnel.
- Line of Succession (see succession of leadership)
- Protection, proper storage, safeguarding, recovery and restoration of vital and important records and documents.
- Review, exercise, evaluate and update the agencies continuity of operations plan.
- Develop and maintain a list of agency resources that may be needed to carry out your assignment.

Agencies will provide CLCEMA with names and contact information for the agency director and two alternatives.

Each agency will retain its identity and autonomy through all phases of event operations. The Laramie County Commissioners have general control of the Cheyenne/Laramie County Emergency Management Agency and are responsible for carrying out the provisions of the Wyoming Homeland Security Act.

Emergency Operations Center

The Laramie County Emergency Operations Center (EOC) serves as a focal point for emergency management and coordination with, and between, governmental departments, ESF Agencies, and incident response personnel.

The EOC is the physical or virtual location established (or designated) within the county from which Laramie County, Albin, Burns, City of Cheyenne, and Pine Bluffs. Representatives will coordinate information and resources to support incident management activities. The EOC houses the staff, equipment, and communications technology that local leadership needs during emergency response.

Facility

The main Laramie County EOC is located in the Archer Complex Government Building at 3962 Archer Parkway, Cheyenne, Wyoming. A secondary/City of Cheyenne EOC is located at 415 W. 18th Street, Cheyenne, WY 82001.

The mobile command and communications vehicle can be operated as an EOC.

Any building designated by any affected jurisdiction can be designated as an EOC.

Function

The Emergency Operations Center provides necessary space and facilities for the centralized direction and control of the following functions:

- Collecting, analyzing, and sharing information related to the incident
- Maintaining and reporting on situational status regarding the incident, including but not limited to, threats, impacts, trends, and response activities.
- Supporting requests, allocating, and tracking resources needed for response.

Cheyenne/Laramie County Emergency Operations Plan

- Developing plans, projecting current and future needs, and assuring successful demobilization of EOC operations.
- Determining policy direction through decision-making, direction, and coordination.

Manning

The Laramie County EOC will be manned by representatives of Laramie County, Senior Officials from the effected jurisdiction, the private sector, and emergency management volunteers involved in emergency operations and volunteers from civic organizations as appropriate. The Laramie County Information Technology Department will be activated for any emergency involving the activation of the EOC.

Activation of EOC

There are three functional levels of EOC activation based on the individual situation and need for coordinated response. The EOC is not staffed 24/7 for monitoring activities. CLCEMA staff members are responsible for the day-to-day monitoring, alert, and notification functions. LCCCC or Incident Commanders directly contact CLCEMA on call staff members in the event of an incident where the EOC functional levels need to be activated or increased.

The Emergency Management Coordinator will determine if and to what level the EOC should be activated. When the Emergency Management Director is not available, the CLCEMA on call staff member will make the determination. EOC activation can be requested by the following authorities: Incident Commander, WOHS Director, or LCCCC. EOC Level 1 activation can only be approved by CLCEMA in coordination with the Local CEO for the effected jurisdictions or the Laramie County Board of Commissioners.

Additionally, the activation of the EOC may follow one of the following “trigger” events:

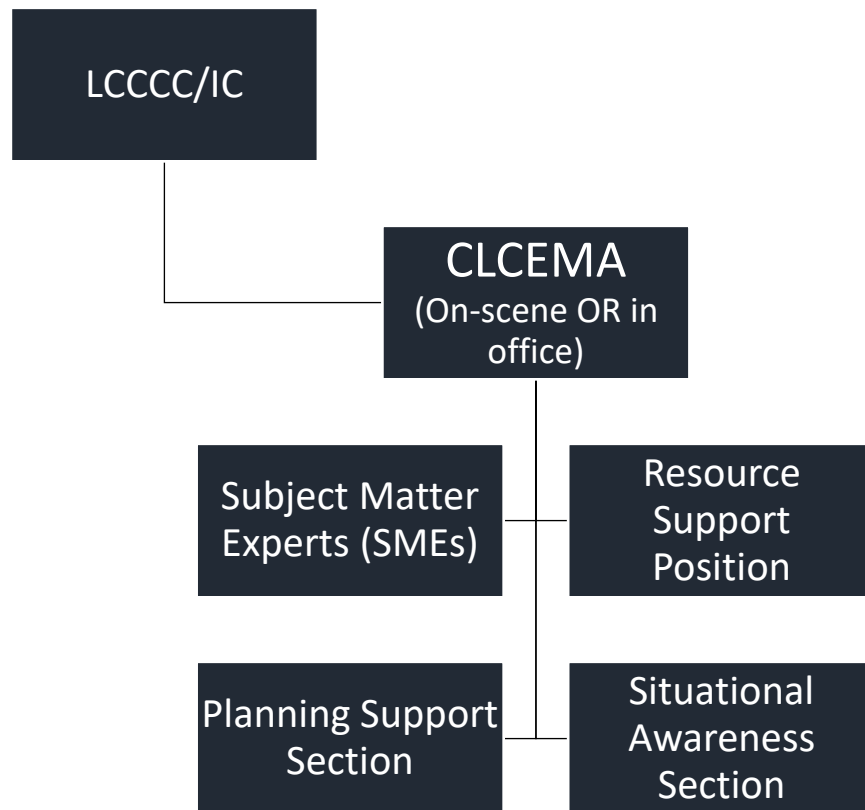

- LCCCC is overwhelmed with requests for resources and assistance to the extent they cannot maintain primary 9-1-1 Public Safety Answering Point (PSAP) capabilities. In this case, Dispatch will maintain PSAP responsibilities, while the EOC absorbs requests for resources from Incident Command.
- LCCCC cannot obtain incident response resources as requested by Incident Command.
- The CEO of the effected jurisdiction or the Laramie County Board of County Commissioners declare a State of Emergency.
- Protective action orders are issued for a large enough area that Incident Command requires additional resource support to implement the order.
- CLCEMA may activate the EOC for any specific event or partial opening for the purpose of information dissemination.

Note: All levels of EOC activation can be in person or virtual which is incident driven and determined by CLCEMA.

EOC Activation Levels

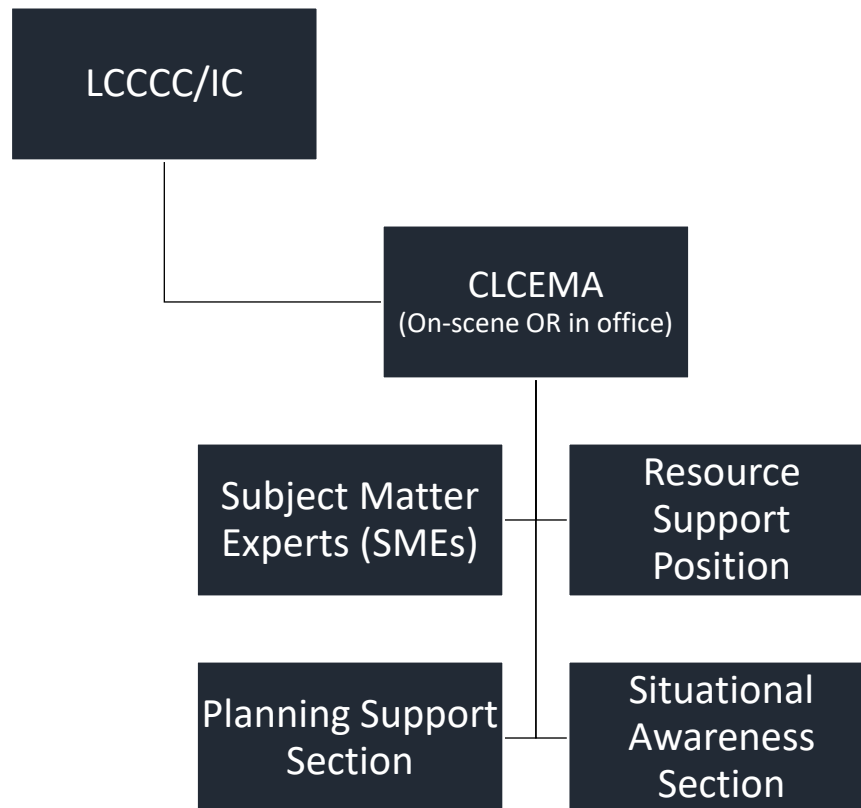

Level 3 – Monitoring/Enhanced Activation: Certain incidents that have the potential to rise to the level of an emergency or disaster. This activation is primarily supported by CLCEMA. This activation level may include one or more subject matter experts depending on the nature of the incident (e.g., hazardous materials spill) and may be activated virtually. The situation may require additional staff or equipment and supplies from another department or jurisdiction to deal with the incident. CLCEMA will support at this level either from the CLCEMA office or on scene Command Post. CLCEMA staff in office will fill all EOC roles such as Situational Awareness Section, Planning Support Section, or Resources Support Section. CLCEMA staff at the Command Post will assist in ICS positions such as Liaison, PIO, Planning, Logistics, and Finance/Admin if requested by the IC.

Figure 1: Level 3 EOC Monitoring/Enhanced Activation Structure

Level 2 – Partial Activation: Emergencies or non-catastrophic disasters which have special characteristics requiring response by multiple municipal or county departments and partner agencies. This activation level requires the acquisition and/or use of special resources and will require support from selected departments. CLCEMA will support at this level either from the CLCEMA office or on scene Command Post. CLCEMA staff in office will either fill all EOC roles or bring in additional volunteers or EMA support to fill roles such as Situational Awareness Section, Planning Support Section, or Resources Support Section. Additionally, CLCEMA staff at the Command Post will assist in ICS positions such as Liaison, PIO, Planning, Logistics, Finance/Admin.

Figure 2: Level 2 EOC Partial Activation Structure

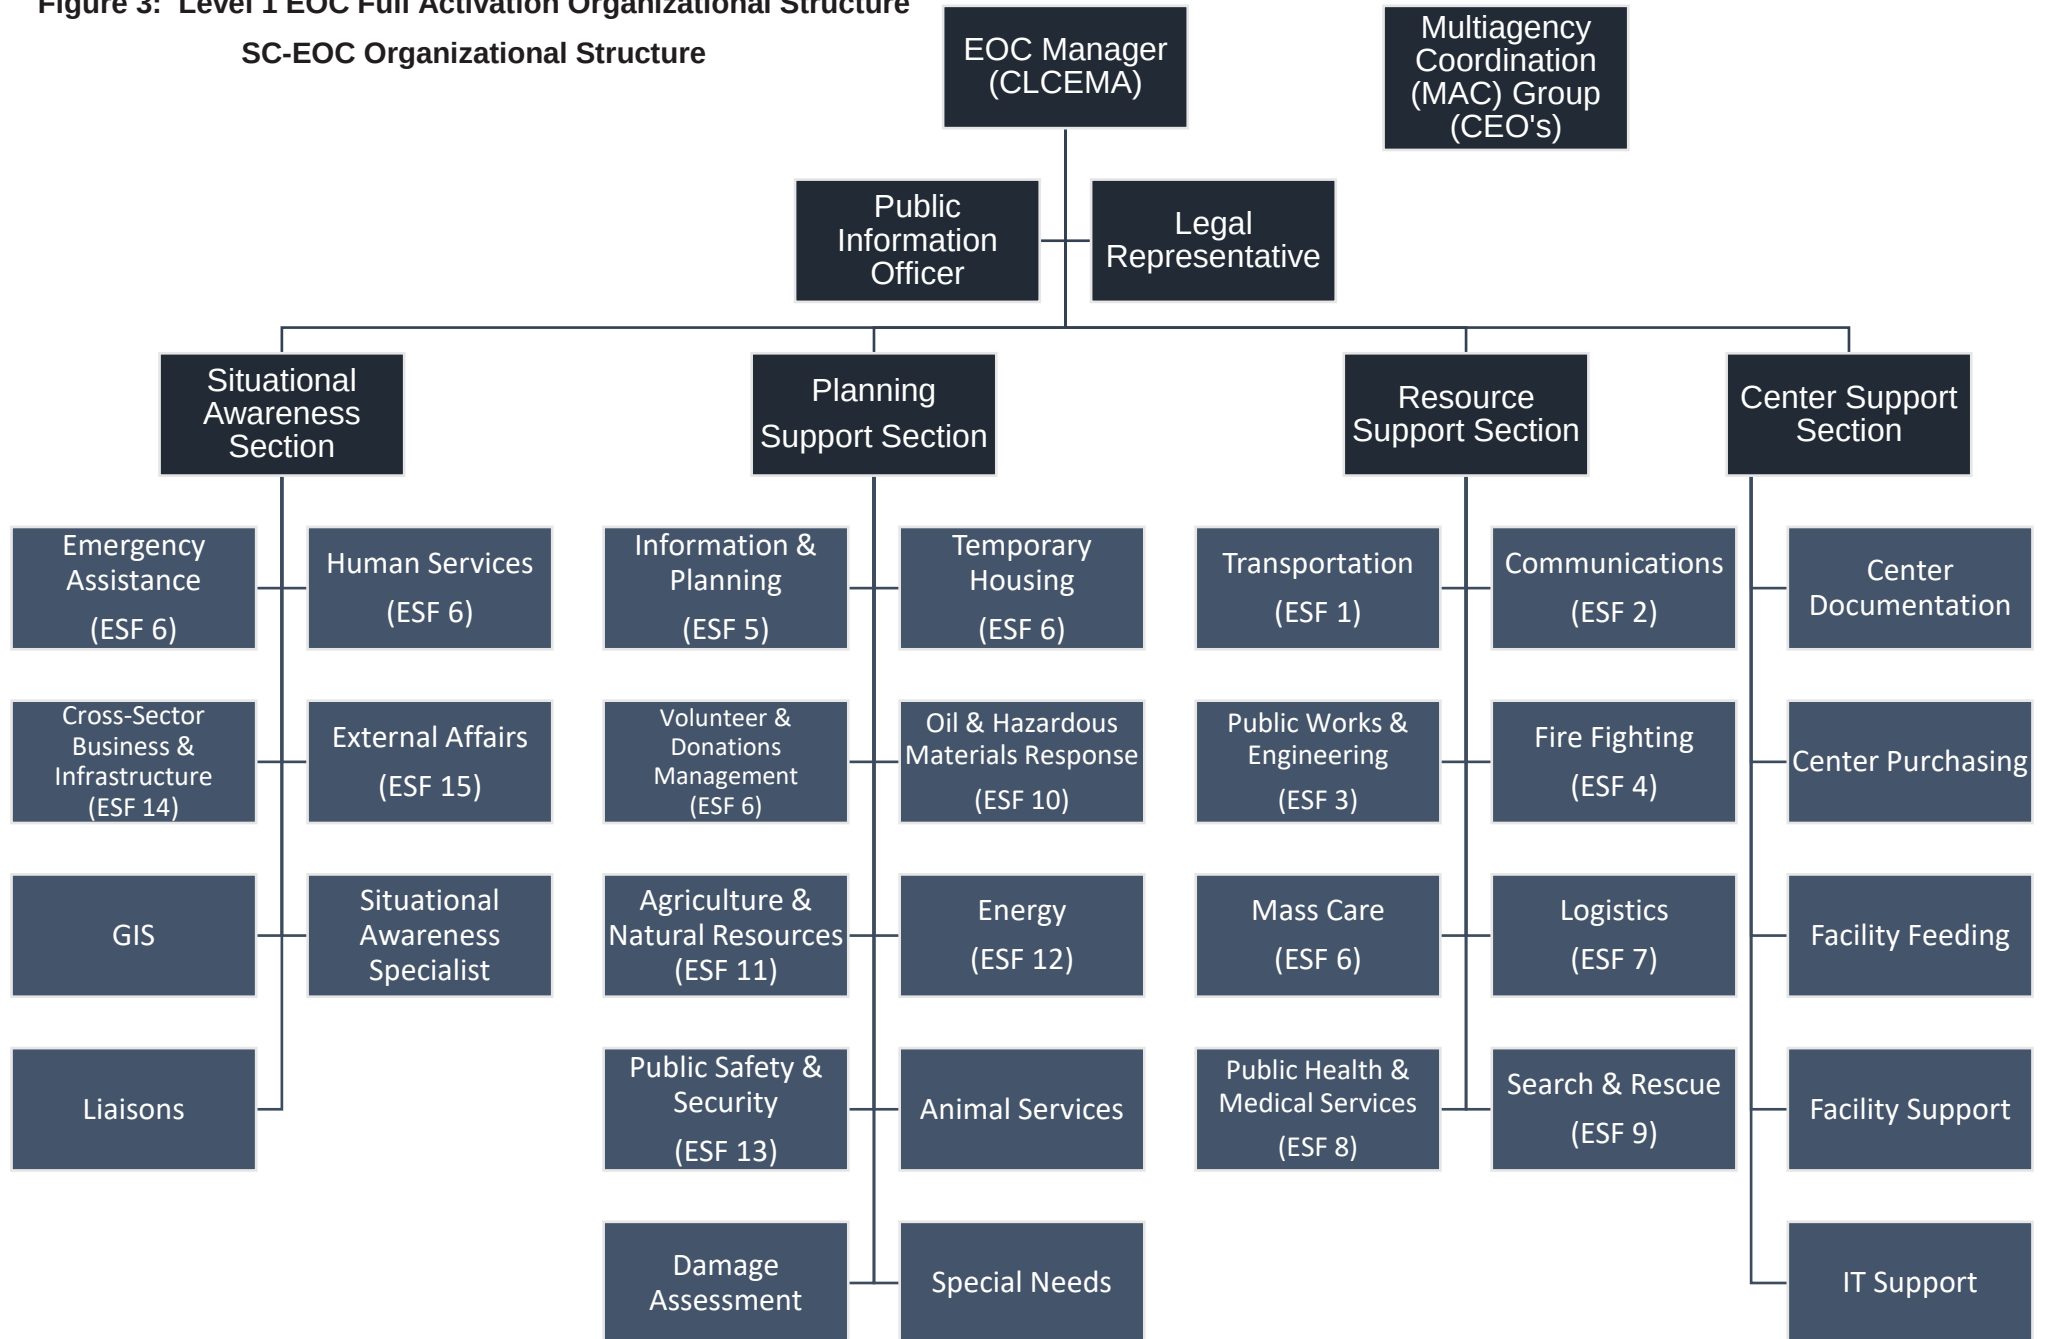

Level 1 – Full Activation: Extraordinary disasters which require the coordinated response of Laramie County, municipal departments, NGO's, supporting agencies, neighboring jurisdictions, and the greater community to save lives and preserve and protect property. This level of activation will require 24-hour response coordination and utilization of staff from other county and municipal departments and agencies, state agencies, and federal partners.

The EOC will initially be organized using the Incident Support Model (ISM), as illustrated in **Figure 3 below**. For some EOC activations, not all positions or sections will be staffed. In these situations, EOC personnel may fill two roles (such as both Situational Awareness Section Chief and Planning Support Section Chief), but sections should not be combined or collapsed. The EOC Manager assumes all roles and responsibilities of non-activated/unfilled EOC positions.

Figure 3: Level 1 EOC Full Activation Organizational Structure

SC-EOC Organizational Structure

The EOC Director is responsible for:

- Setting EOC objectives
- Facilitating the development of policy direction and resource prioritization by elected officials and administrative leadership through the MAC Group
- Determining the need for additional command-level staff, including an Assistant Manager, Legal Advisor, Safety Officer, or other technical specialists
- Overseeing EOC operations and ensuring that objectives are being developed and carried out in coordination with on scene incident management objectives
- Managing coordination and communication with all activated EOC Sections and ESF's

The Public Information Officer (PIO) is responsible for:

- Ensuring timely, accurate, and accessible information is shared with the public
- Coordinating with subject matter experts to collect and develop appropriate public information and materials
- Reporting to the incident scene, as requested by an Incident Command (IC), to collect information regarding the incident from operational staff and/or to provide briefings to the media
- Distributing disaster messaging on all relevant platforms
- Developing messaging for designated spokespersons to share with the public and/or media, including elected officials
- Determine location and development of JIC/JIS operations

The Situational Awareness Section is responsible for:

- Collecting, analyzing, and disseminating incident information through assessment of Community Lifelines
- Developing a Situation Report (SITREP) for each operational period
- Creating products for the MAC Group, PIO, and other internal and external stakeholders
- Monitoring weather and geologic forecasts and providing updates to the EOC, IC, and MAC Group, as appropriate
- Processing requests for information
- Developing reports, briefings, and presentation products
- Developing material to support public messaging
- Integrating Geographic Information Systems (GIS) and other technical information
- Maintaining updated displays in the EOC and other methods as appropriate

The Planning Support Section is responsible for:

- Coordinating closely with the Incident Command Planning Section (if established) to ensure that both on-scene and EOC personnel have appropriate contingency plans
- Providing a range of current and future planning services including development of an EOC plan for support of the incident
- Developing an EOC Support Plan (ESP) and other incident reports as needed
- Developing contingency, deactivation, and recovery plans
- Assisting in developing and executing the shared goals of multiple jurisdictions and organizations involved in managing the incident
- Coordinating a standard planning process to achieve the objectives of the EOC leadership and foster unity of effort among all organizations represented

The Resource Support Section is responsible for:

- Processing resource and task requests from on-scene ICs and/or their designated Logistics Section Chiefs
- Enhancing, but not replacing, pre-existing resource management structures such as dispatch centers, expanded dispatch, or agency-specific mutual aid agreements
- Sourcing, requesting/ordering, and tracking to their assigned incident all resources, including supplies, equipment, and personnel, acquired from:
 - Government departments and agencies
 - Community organizations and nongovernmental partners
 - Mutual aid agreements
 - Purchased or leased items

The Center Support Section is responsible for:

- Coordinating EOC facility and staff support needs including communications, IT, and administrative processes
- Organize general services such as supplies, equipment, facility security, maintenance, staff support, and scheduling
- Conducting financial tracking, documentation, and filing for the EOC

The Multiagency Coordination Group (MAC) is responsible for:

- The lead Chief Elected Official for the effected jurisdiction or the Laramie County Board of Commissioners are responsible for the formulating of policy and operational guidelines for the conduct of emergency operations.
- They are also responsible for the overall management of survival and recovery efforts.
- Emergency Management Director: The Cheyenne/Laramie County Emergency Management Director is charged with planning; organizing, directing and supervising emergency operations conducted within Laramie County and will:
 - Assign and, where necessary, train personnel to accomplish required tasks in the operation of the EOC.
 - Ensure that the EOC and appropriate Annexes are periodically updated.
 - Maintain sufficient supplies and equipment to ensure the operational capability of the EOC.
 - Supervise and coordinate the functions during operations.
 - Provide briefings as needed.
 - Perform such other tasks as may be required to safeguard property and protect the people of Laramie County during emergencies.
 - Locate and coordinate resources and resource requests.

Being said that all incidents are handled at the lowest possible level beginning with local response and Incident Command, the EOP may not be utilized or effective for all emergencies. As the size of the incident expands the EOP can be utilized to enhance both incident command and the ties to local government. The EOP organizational structure recognizes both site specific IC and EOC Operations Incident Command. The EOP can be utilized at any time to enhance IC decisions at any location.

Lifelines - ESF

The Emergency Support Functions, Lifelines, and Core Capabilities are utilized by EOC staff to support the overall operations of an incident. Together, these functions provide an invaluable tool for incident and EOC personnel to understand the overall situational awareness of incident in order to efficiently respond, recover and mitigate the situation.

An Emergency Support Function (ESF) leader will be appointed for each ESF needed during an event. The leader or designee will be the primary communications link with or within the Emergency Operations Center (EOC). This approach will maintain the needed command structure between the command center(s) and the agency providing support to the ESF. The ESF section of this EOP provides more information on each of these functions and how they are to be implemented.

Message Control

1. Radio communications received in the EOC will be via the Laramie County Combined Communications Center or ARES communications. All emergency traffic through the center is recorded on digital format and in the Computer Aided Dispatch System.
2. Incoming information will be passed to the Resource Support Section for information and disposition as deemed appropriate.
3. Actions taken as a result of incoming information will be made as an entry in the computer.
4. Outgoing Messages: Outgoing messages will be given to the Resource Support Section for distribution. Copies of messages directing the commitment of resources or personnel will be sent to the Operations Section Chief at the On-Scene Command Post or Incident Commander Designee. All information passed will be copied to the Emergency Management Director by the agency directing the action. All messages are to be documented using the ICS 213 Form for Resource Requests.

Succession of Leadership

The line of succession for continuity of government for Laramie County is as follows:

1. County
 - a. Chairman, County Commissioners
 - b. Vice Chair, County Commissioners
 - c. County Commissioner
 - d. Laramie County Sheriff
 - e. Laramie County Clerk
2. Cities/Towns
 - a. Mayor
 - b. President of City Council
 - c. Vice President of City Council
 - d. Chairperson of Finance Committee
 - e. Chairperson of Public Services Committee

3. Cheyenne/Laramie County Emergency Management Agency
 - a. Director of Emergency Management
 - b. Operations Coordinator/Fire Warden
 - c. Planning/Administration Coordinator

Line of succession for each agency/department head is according to the department rules and/or standing operating procedures established by each department.

Agency heads will determine to what degree their assigned personnel to the EOC will be authorized to make decisions and commit or expand department resources. Agency heads shall retain responsibility for the direction and control of their respective operations and personnel and shall coordinate all department actions related to the incident with the EOC when in operation.

Public Information and Warnings

Purpose

This section establishes personnel assigned and an effective alert and warning system within Laramie County capable of disseminating adequate and timely warning to the county officials and public in the event of threatened disaster.

Emergency Public Information

Laramie County or any jurisdiction within the county should attempt to identify and appoint a person who can serve as a Public Information Officer (PIO), if not on a day-to-day basis, at least in time of emergency. A working knowledge of media in the following areas should be addressed.

- Basic knowledge of media and print operations.
- Basic knowledge of emergency preparedness responsibilities.
- Perform the PIO duties as their primary function during an emergency.
- React calmly in emergency situations.
- Ability to coordinate with different levels of operations, jurisdictions and other information officers.

During an emergency the PIO serves as the spokesman for the elected official(s) in charge of the emergency. The PIO is a member of the EOC staff. The primary function is to coordinate and gather information, and disseminate emergency information to the media. In the absence of a PIO the elected official(s) for the affected jurisdiction(s) should serve as the point of contact for media.

The PIO is a member of the command staff and works directly with the EOC commander. The EOC is responsible for the prompt, correct dissemination of information.

The PIO Should:

- Attend as many briefings and situation updates as possible, regardless what section of the EOC is present.
- Establish a list of all media, including such items as hours of operation, power output, coverage area and details on backup power.
- Maintain contact with all media sources as frequently as possible to ensure credibility, to ensure the media list is current, and to demonstrate the need for media help in time of emergency.

- During any emergency, establish a “Joint Information Center” (JIC) to assure smooth relationships with other PIOs and to release the same information.
- Establish an information office which is the official point of contact for the media during an emergency.
- Develop a media distribution plan to determine the quickest, most efficient way to get emergency information to all media sources.
- Maintain a news release file
- Keep commanders and officials apprised of media needs and releases.
- Collect, verify, and disseminate information to the public that will help them make decisions about their health, safety and welfare.
- Understand existing plans and procedures of the “Joint information System (JIS) and JIC.
- Seek legal counsel prior to releasing potentially dangerous information.

Joint Information System (JIS)

The JIS is a network of PIOs working together to deliver accurate, timely information the public needs and wants. PIOs can use any variety of methods to talk or provide information with other PIOs. The system should ensure clear, accurate information is being delivered amid the confusion of disaster response. No one person is in charge of the JIS, it is a cooperative effort. The JIS mirrors the ICS structure, so the primary responding agency will most likely take the lead in releasing information. The JIS gives the PIOs the ability to share information, resources and equipment designed to enhance response ability.

Joint Information Center (JIC)

The JIC is a central location to facilitate operation of the JIS during and after the event. The JIC enhances information coordination, reduces misinformation and maximizes resources. The JIC is a physical location with tools to enhance the flow of public information. It provides a central working facility where PIOs can gather. The JIC allows PIOs to handle increased information needs by the media and the public. The JIC can provide “one-stop shopping” for the media to get official information. A JIC can be as simple as a small office or the corner of a command center or as complex as a pre-established facility with multiple phone lines, full media monitoring and news conference stage.

Media Resources

Broadcast Media

Both radio and TV broadcast stations at the local level will play a critical role in the timely dissemination of information to the citizens within the county. Immediate routing of information is essential to the health and welfare of the citizens. It is important to continuously brief and up-date media with critical information. This form of media will be a necessary partner in the beginning stages of any emergency.

Published/Newspaper Media

All newspapers, monthly, weekly, or daily that are published in your county will play a crucial role in information dissemination. Local print media can be used to document events and provide victim recovery information. Print journalists write comprehensive stories that include analysis of the event and a chronology of proceedings leading up to, causing and immediately following the event.

Web-Based & Social Media

Web-Based and social media outlets want the same information as other media outlets. Most web based organizations are attached to more traditional news outlets, but more strictly web-based news outlets are appearing. Social Media outlets such as, Twitter, Facebook, Instagram, YouTube, and TikTok are quick resources to reach many people within a short period of time. Not all local residents or businesses may be utilizing all of these resources; posting information on all is a best practice.

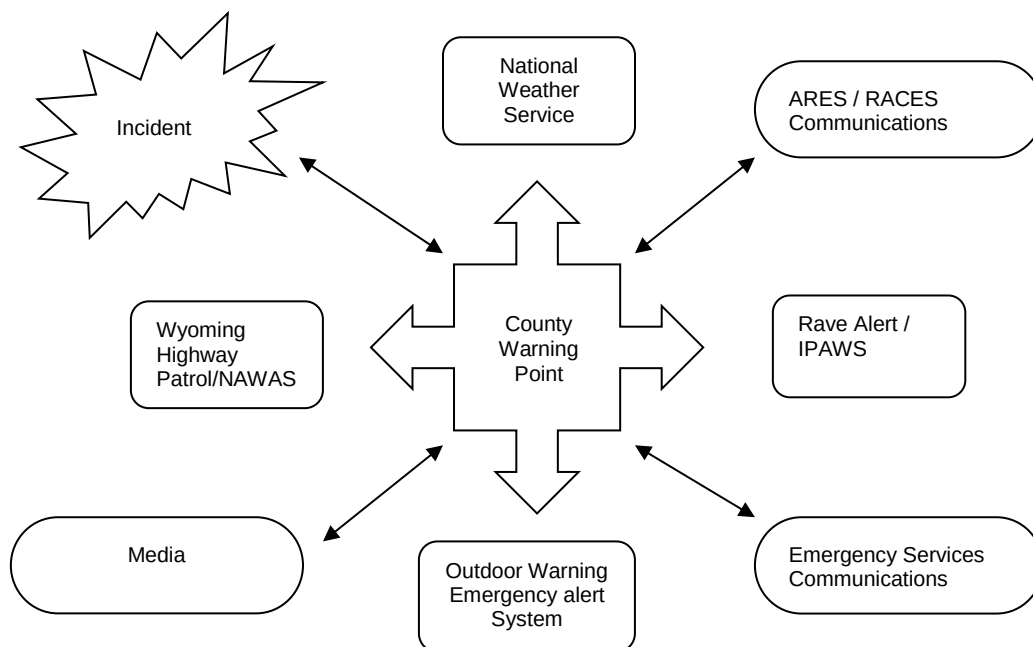

Emergency Warnings

The Laramie County Combined Communications Center (LCCCC) is the 24 hour warning point for Cheyenne/Laramie County Emergency Services. The Wyoming Highway Patrol Dispatch Center is also a 24 hour warning point. The warning point will receive reports of emergencies from all routes used for normal operation including the NWS and the NAWAS from the Wyoming Highway Patrol, phone, email, texting, social media, fax, etc. The priority of the LCCCC is public notification of an immediate threat to life and property in a timely manner.

Radio, pager, and notification will be used to notify all emergency responders under the control of the LCCCC. Notification will be made to all other public warning points. The communications center will notify and coordinate local first and primary responders in any disaster or major emergency. CLCEMA will work in coordination with LCCCC and WHP Dispatch to assist in dissemination of public emergency notifications.

For major events such as matters of national security or imminent danger to Laramie County or the region, notification could come directly from the State of Wyoming via the Wyoming Office of Homeland Security or directly from the Federal Government. CLCEMA, if given warning will notify the Laramie County Commissioners and any other city/county officials as needed.

For severe weather watches and warnings, these will be initiated by the National Weather Service (NWS) with follow-up by CLCEMA who will assist with further public notifications and senior official notifications to the affected areas.

Notification Routes

Outdoor Warning System

The Laramie County Outdoor Warning System uses a steady warning signal to alert citizens of immediate threat to life and property. The tone is an all hazards alert intended to notify citizens to seek any EAS affiliated form of radio / TV media for instructions. The system consists of multiple sirens located in Laramie County, including Cheyenne, Burns, Albin and Pine Bluffs. During tornado warnings the Outdoor Warning System is activated automatically via the computer system and is based on the NWS polygon identifying the location of the tornado.

Emergency Alert System (EAS)

EAS allows broadcast stations, satellite radio, cable systems, DBS systems, participating satellite companies, and other services to send and receive emergency information quickly and automatically, even if their facilities are unattended. EAS was designed so that if one link in the dissemination of alert information is broken, members of the public have multiple alternate sources of warning. EAS equipment also provides a method for automatic interruption of regular programming, and is able to relay emergency messages in any language used by the EAS participant.

An Emergency Manager may access and use the system, via the IPAWS program, to send out a public warning. The National Weather Service can also assist in accessing the EAS system to assist local and state jurisdiction with all hazard notifications.

Rave Alert Emergency Communications

Rave Alert is an internet based critical notification system used to mass notify citizens in Laramie County of potential dangers. The map based system can isolate a neighborhood or notify the entire county of timely critical information. The LCCCC along with Cheyenne/Laramie County Emergency Management has the ability to use Rave to rapidly reach both emergency services and citizens.

Integrated Public Alert and Warning System (IPAWS)

IPAWS uses different pathways to simultaneously send alerts through many different channels such as televisions, radios, cell phones, wireless emergency alert, internet applications, electronic billboards, social media and other electronic pathways. This system is activated either by a Cheyenne/Laramie County Emergency Management staff member or by the Duty Officer with the Wyoming Office of Homeland Security.

Wireless Emergency Alerts (WEA)

Wireless Emergency Alerts (WEA) allows public safety officials to send warnings directly to cell phones and other mobile devices in affected areas. These short messages look like text messages, but unlike texts, which are sent directly to a phone number, these warnings will be broadcast to all phones within range of designated cell towers. The alerts will tell residents of the type of warning, the affected area, and the duration.

Amateur Radio Communications

Amateur Radio Operators often referred to as “Ham Radio” can be utilized for emergency public information. Their ability to relay information to local, national or worldwide outlets can be of great use in an emergency especially if the event becomes long term and other sources of information sharing is lost due to the incident. Networks can easily be set up by volunteer operators to pass information rapidly.

Other communication methods include:

- Cable Interrupter/Override System
- Mobile siren and public address systems by emergency vehicles
- Emergency services radio and pager systems.
- Telephone
- Personal Contact
- Radio Amateur Civil Emergency Services (RACES)
- Door to door
- Other means as deemed appropriate

Emergency and Disaster Assistance Process

This section describes the process, templates, and individuals involved in issuing a declaration of emergency or disaster for all-hazards incidents, including potential coordination with the state and federal governments. A formal declaration of emergency or disaster may expedite access to necessary resources and assistance from neighboring communities, key stakeholders, and when appropriate the state or federal government.

There are two types of declarations assistance can be provided for in the Stafford Act, Emergency declarations and major disaster declarations. Both types provide the President to provide supplemental federal disaster assistance however, the events related to the two different types of declaration and scope and amount of assistance differ. In both situations local, state, and federal agencies will conduct assessments of the emergency to determine qualifications of declaration and resources or assistance available. Not all large emergencies or disasters will qualify for assistance.

Stafford Act Definitions of Declarations

Emergency Declaration: Is more limited in scope and without the long-term Federal recovery programs of a major disaster declaration. Generally, Federal assistance and funding are provided to meet a specific emergency need or to help prevent a major disaster from occurring.

Major Disaster Declaration: Provides more federal programs for response and recovery than an emergency declaration. Unlike an emergency declaration, a major disaster declaration may only be issued after an incident.

Locally Declared Emergencies or Disasters

If an emergency exceeds the resources and capabilities of local response operations and/or immediately available mutual aid resources, the Laramie County Board of County Commissioners may declare a state of emergency. This declaration may include the entire county or specific communities, as requested by City/Town Councils. The declaration can be used to request and secure additional assistance, including the Wyoming State Response Coordination Center (SRCC).

A template for a local disaster declaration, provided by Wyoming Office of Homeland Security (WOHS) or the Federal Emergency Management Agency (FEMA), is available through CLCEMA. Once the declaration is sent to WOHS, a State of Emergency can be declared by the Governor of Wyoming, as described below.

Emergency Declaration

- EOC activities are increased with Emergency Management evaluating Lifelines and coordinating with ESF's.
- Anticipates that the situation can be resolved with Town/County resources and limited mutual aid.
- Informs the public that it may not be "business as usual" in the jurisdiction until the emergency is resolved. This could apply to curfews, rationing, availability of government services, traffic routing, etc.
- CLCEMA, in coordination with local officials, are authorized to request and employ all available resources and personnel of the Town/County as needed.
- Informs local government employees that elected officials may need to temporarily suspend Town/County personnel policies regarding temporary hires, remote work, adjusting standard hours of operation, changing duty stations, and more for some or all employees in response to the emergency.

Disaster Declaration

- Includes everything for an Emergency Declaration with the exception that the jurisdiction does not have adequate local or immediately available mutual aid resources.
- Includes a request for assistance from the next-higher level of government. For example, the Town of Pine Bluffs can make a Disaster Declaration to Laramie County asking for specific resources to assist with an emergency. Laramie County can make a Disaster Declaration to the State of Wyoming.
- If a situation is in both the Town and the County, it is recommended that the two bodies make a joint Disaster Declaration to the State.

Local Declaration Considerations

- An Emergency Declaration does not need to be made as a pre-requisite to creating a Disaster Declaration.
- The Emergency or Disaster Declaration may extend to all or any geographic area within Town or County jurisdiction.
- All Emergency/Disaster Declarations should be made in writing.
- A joint Town/County Declaration formalized by resolution is preferred.

- It is preferred that the Town first makes a Disaster Declaration to the County. This process will improve the likelihood of receiving state assistance. However, nothing prevents the Town from making a Disaster Declaration directly to the State.
- Once the Local Disaster Declaration is forwarded to Wyoming Office of Homeland Security (WOHS), a State of Emergency can then be declared by the Governor of Wyoming using an executive order or proclamation. CLCEMA shall maintain supporting documentation for the Disaster Declaration through damage assessment and ESF information. In many cases, implementation of the Wyoming State Response Coordination Plan (SRCP) and access to state and federal programs or funding are contingent on correctly following the declaration process in a timely manner.

State Declared Disasters

If the Governor determines the disaster is beyond the ability of local government to effectively respond, a State of Emergency can be declared through an executive order or proclamation.

- CLCEM will provide documentation in support of a Declaration request, in accordance with Wyoming State Statute and WOHS policy.
- The action of the Governor will be in support of the local jurisdiction's expressed needs.

The Declaration of a State of Disaster or State of Emergency by the Governor serves to:

- Activate the emergency response, recovery, and mitigation phases of the state and local emergency management plans, including the SRCP.
- Provide authority for the mobilization and deployment of all resources to which the plans refer, or any other provision of law relating to emergencies.
- In alignment with the SRCP, allow various state agencies authority and responsibility for emergency functions.

WOHS will present the Governor with the following information:

- Nature and amount of state and local resources that have been or will be committed
- An estimate of the amount and severity of damage and impacts
- An estimate of the type and amount of state assistance needed

The State of Disaster or Emergency shall continue until the Governor finds that the threat of danger has passed or that the disaster has been dealt with to the extent that emergency conditions no longer exist, and the Governor terminates the State of Disaster or Emergency by executive order or proclamation. The executive order shall indicate:

- The nature of the disaster
- The area threatened
- The conditions which have brought it about, or which make possible termination of the State of Disaster or Emergency

An executive order or proclamation shall be disseminated promptly by means calculated to bring its contents to the attention of the public and, unless the circumstances attendant upon the disaster prevents or impede, shall be promptly filed with WOHS, the Secretary of State, and the local jurisdiction in the area to which it applies.

Federal Assistance

As established in the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), all requests for a Declaration by the President that a major disaster exists shall be made by the Governor. The Stafford Act includes two types of disaster declarations:

- **Emergency Declarations:** The President can declare an emergency for any occasion or instance when the President determines federal assistance is needed. Emergency declarations supplement state and local efforts in providing emergency services.
- **Major Disaster Declarations:** The President can declare a major disaster for any natural event that the President determines has caused damage of such severity that it is beyond the combined capabilities of state and local governments to respond. A major disaster declaration provides a wide range of federal assistance programs for individuals and public infrastructure, including funds for both emergency and permanent work.

Federal assistance through a Presidential Disaster Declaration is requested by the Governor if the situation meets the criteria for a declaration. The Governor submits a written request to the president through FEMA Region VIII in Denver, CO. FEMA gathers information to supplement the Governor's request, and this is sent to the President who determines the final disposition. The disposition of the request is transmitted through FEMA Region VIII back to the Governor. FEMA, part of the Emergency Preparedness and Response Directorate of the Department of Homeland Security, is tasked with coordinating the response of federal agencies with state and local governments.

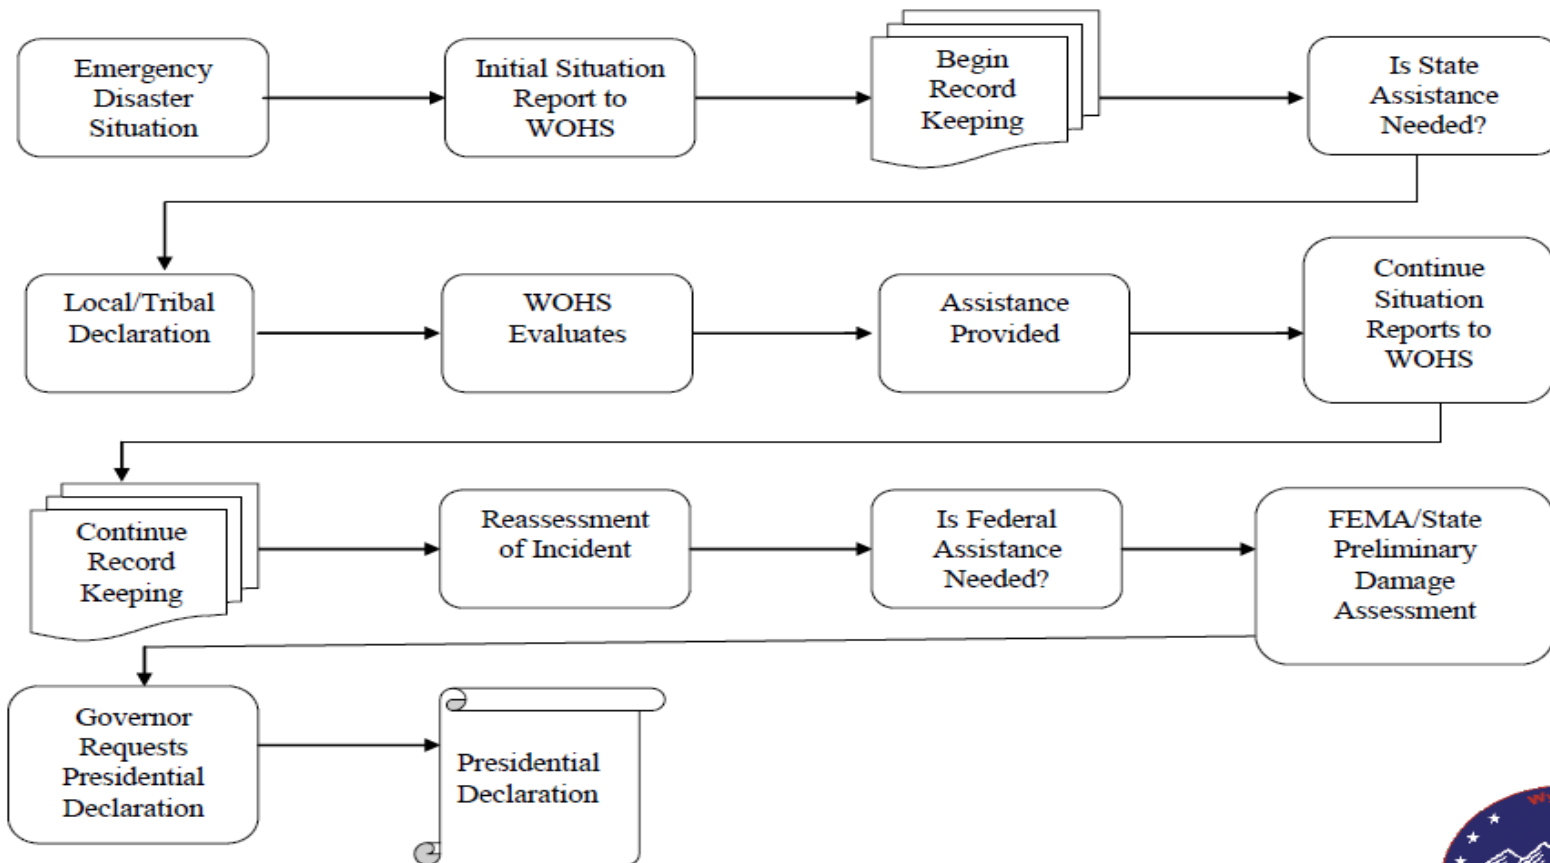

Based on the Governor's request, the President may declare that a Major Disaster or Emergency exists, thus activating an array of federal programs to assist in the response and recovery effort. Not all programs, however, are activated for every disaster. The determination of which programs are activated is based on the needs found during the damage assessment and any subsequent information that may be discovered.

FEMA disaster assistance falls into three general categories:

- **Individual Assistance** — aid to individuals and households;
- **Public Assistance** — aid to public (and certain private non-profit) entities for certain emergency services and the repair or replacement of disaster-damaged public facilities;
- **Hazard Mitigation Assistance** — funding for measures designed to reduce future losses to public and private property.

Some declarations will provide only individual assistance or only public assistance. Hazard mitigation opportunities are assessed in most situations. Procurement Disaster Assistance Teams (PDAT) may be available as well to support in the disaster recovery process. CLCEMA in coordination with WOHS will provide specific rules, regulations, and templates to local officials and the public if a declaration should be approved.

Disaster Assistance Process Flow Chart

Disaster Assistance Process Flow Chart. Wyoming Office of Homeland Security (WOHS) <https://hls.wyo.gov/plans-and-documents>

Plan Development and Maintenance

The development process of the EOP has included participation of key local and state agencies. The plan continues to be refined and revised as needed through a process of yearly review, exercise and evaluation by emergency management and the agencies that function under the plan. The plan is updated based on the evolving changes in emergency operations locally, within the state, and at the federal level. Changes are verified and built to be in line with the National Preparedness Goals and in coordination with the National Response Framework (NRF) and the National Incident Management System (NIMS). The Cheyenne/Laramie County Emergency Management Agency shall provide updated electronic or hard copies of any revision made to the plan.

The contents of this plan must be known and understood by those people responsible for its implementation. The Cheyenne/Laramie County EMA Director will brief staff members and county officials concerning their role in emergency management and the contents of this plan in particular. Department directors are responsible for development and maintenance of their respective segments of this plan and their appropriate supporting Standard Operating Procedures (SOPs) or Response Plans as stated herein and set forth in each Annex.

The Cheyenne/Laramie County Emergency Management Agency will ensure a bi-annual review of this plan is conducted. When minor updates have been added, the approval of the EOP will be submitted to the Laramie County Commissioners only. Every six years or when major updates have been added, the approval of the EOP will be submitted to all of the Laramie County governing bodies. The EMA Director will coordinate this review and any plan revision found necessary. Testing and exercise of the plan will occur at least once a year in the form of a simulated emergency exercise in order to provide practical, controlled experience to those emergency managers tasked within the plan.

Authority and References

This Laramie County Emergency Operations Plan was prepared in accordance with the “Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988” hereinafter referred to as the “Stafford Act”. This plan is established and utilized according to the Federal, State, and Local legislations as follows:

Local:	Emergency Management Resolution Emergency Management Ordinance
State:	Wyoming Homeland Security Act: Wyoming statute § Title 19, Chapter 13 Wyoming Emergency Response Act Wyoming § Title 35, Chapter 9 W.S. 18-2-101, W. S. 18-3-105, and W.S.18-3-504 (powers of County Commissioners) Wyo. Stat 18-3-606 and W.S. 18-3-609 (powers of County Sheriffs) Wyo. Stat. 6-5-204 and 7-2-101 (powers of peace officers generally) Wyo. Stat. 15-1-109 (powers of mayors) Wyo. Stat. 35-9-201 (powers of local fire protection districts) Wyoming Response Plan
Federal:	Public Law 81-920 (Federal Civil Defense Act of 1950) as amended Public Law 93-288 (Disaster Relief Act of 1974) as amended Homeland Security Act of 2002 Homeland Security Presidential Directives National Incident Management System National Response Framework National Preparedness Goal

Cheyenne/Laramie County Emergency Operations Plan

The Wyoming Office of Homeland Security as the lead emergency program within the State of Wyoming requires each local emergency management coordinator to produce and adhere to an Emergency Operations Plan, created and established for each jurisdiction.

By resolution the Board of Laramie County Commissioners adopted National Fire Protection Association Standard 1600 (NFPA 1600), the Standard on Disaster/Emergency Management and Business Continuity Programs 2000 Edition. NFPA 1600 requires under chapter 3-4.1 that Laramie County shall implement a mitigation plan to eliminate hazards or mitigate the effects of hazards that cannot be eliminated. Further, NFPA 1600 3-4.2 provides that the mitigation strategy shall be based on the result of hazard identification and risk assessment, impact analysis, program assessment, operational experience, and cost benefit analysis.

Cheyenne/Laramie County ERP – Emergency Support Functions

Introduction

The events of 2017 challenged the Federal Emergency Management Agency's (FEMA) ability to effectively balance concurrent large-scale disaster operations. Hurricanes Harvey, Irma, and Maria, as well as wildfires in California, required FEMA to allocate scarce resources across four FEMA regions, from the west coast of the United States to the Caribbean Sea. The 2017 Hurricane Season FEMA After-Action Report identified the need to create a new operational prioritization and response construct, which would effectively characterize incidents and identify the root causes of priority issue areas. This new construct aims to create outcome-driven, effective solutions and help distinguish the highest priorities and most complex issues from other incident information. In 2018, FEMA operations along the Atlantic coast, the Florida Panhandle, Alaska, and the Western Pacific, including a historic wildfire season in California and additional operations in Hawaii validated the pressing need for a way to prioritize response operations. FEMA established the community lifelines during 2018 to address this need and has continued to improve and refine its implementation based on lessons learned. The interrelationship of ESFs, core capabilities, and lifelines can be thought of in terms of means, ways, and ends and are described in the following paragraphs.

Emergency Support Functions (The Means)

The Emergency Support Functions (ESF) Assistance Guide outlines specific tasks or functions that may be carried out prior to, during and after an emergency or a disaster. The guide describes, in specific detail, the operational system identified in the Laramie County Emergency Response Plan (ERP), that will be used to carry out the tasks or functions listed. It should be based on the Incident Command structure described in the basic plan.

These tasks mirror the emergency support functions of the Wyoming Response Plan and can also be applied to specific functions within the Incident Command System (ICS) or the National Incident Management System (NIMS).

These functions are described in a checklist format for ease in times of stress and the possibility that a support function may be led by a person unfamiliar with the duties of the support function or the ERP.

The Federal Government and many state governments organize their response resources and capabilities under the ESF construct. ESFs have proven to be an effective way to bundle and manage resources to deliver core capabilities. The Federal ESFs are the primary, but not exclusive, Federal coordinating structures for building, sustaining, and delivering the response core capabilities. The ESFs are vital structures for responding to Stafford Act incidents; however, they may also be used for other incidents. Most Federal ESFs support a number of the response core capabilities. Though not listed under every ESF, all ESFs support the core capabilities of Planning, Operational Coordination, and Public Information and Warning. In addition, there are responsibilities and actions associated with Federal ESFs that extend beyond the core capabilities and support other response activities, as well as department and agency responsibilities.

The Federal ESFs bring together the capabilities of Federal departments and agencies and other national-level assets. ESFs are not based on the capabilities of a single department or agency, and the functions for which they are responsible cannot be accomplished by any single department or agency. Instead, Federal ESFs are groups of organizations that work together to deliver core capabilities and support an effective response.

The ESFs and other organizing bodies are the way departments and agencies, community organizations, and industries organize to enhance coordination and integration to deliver the response core capabilities.

As noted above, many state and local jurisdictions have adopted and tailored the ESF construct. Since state and local jurisdictions establish ESFs based on their specific risks and requirements, there is no mandatory or direct linkage to the Federal ESFs. State and local governments are encouraged to engage members of the whole community as part of whatever coordinating processes they use.

Lifelines (The Ends)

The *National Response Framework (NRF)*, 4th Edition, introduces community lifelines. The primary objective of lifelines is to ensure the delivery of critical services that alleviate immediate threats to life and property when communities are impacted by disasters. Stabilizing lifeline services is the highest priority when responding to disasters. The construct organizes and aligns these critical services into one of seven lifelines, which help frame the way disaster impacts are identified, assessed, and addressed.

The lifelines provide an outcome-based, survivor-centric frame of reference that assists responders with the following:

- Rapidly determining the scale and complexity of a disaster;
- Identifying the severity, root causes, and interdependencies of impacts to critical lifesaving and life-sustaining services within impacted areas;
- Developing operational priorities and objectives that focus response efforts on the delivery of these services by the most effective means available;
- Communicating disaster-related information across all levels of public, private, and non-profit sectors using a commonly understood, plain language lexicon; and
- Guiding response operations to support and facilitate their integration across mission areas.

Each lifeline is composed of multiple components and subcomponents that help define the services that make up that lifeline. The lifelines and components are fixed categories, but the subcomponents may be adjusted as necessary. The table below shows the lifelines and their components.

Cheyenne/Laramie County Emergency Operations Plan

Cheyenne/Laramie County Emergency Operations Plan

Law enforcement and government services, as well as the associated assets that maintain communal security, provide search and rescue and firefighting capabilities, and support public safety. Includes impending risks to impacted communities, public infrastructure, and national security concerns.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation

ESF 3-Public Works & Engineering

ESF 4-Fire Fighting

ESF 5-Information & Planning

ESF 9-Search & Rescue

ESF 10-Oil & Hazardous Materials Response

ESF 12-Energy

ESF 13-Public Safety & Security

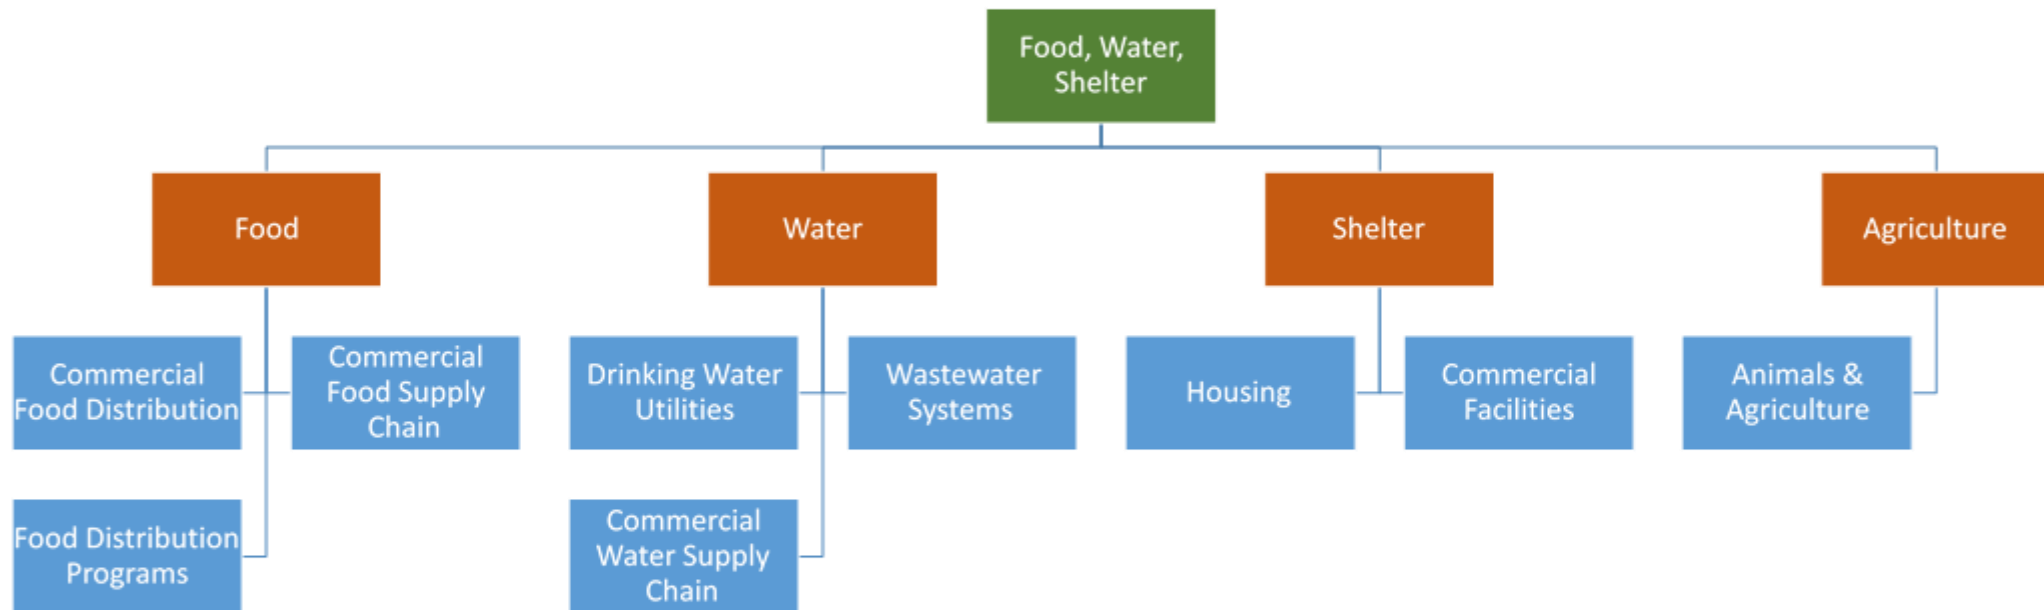

ESF 14-Cross-Sector Business & Infrastructure

Cheyenne/Laramie County Emergency Operations Plan

Support systems that enable the sustenance of human life, such as food retail and distribution networks, water treatment, transmission and distribution systems, housing, and agriculture resources.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation

ESF 2-Communications

ESF 3-Public Works & Engineering

ESF 4-Fire Fighting

ESF 5-Information & Planning

ESF 6-Mass Care, Emergency Assistance, Temporary Housing & Human Services

ESF 7-Logistics

ESF 8-Public health & Medical Services

ESF 11-Agriculture & Natural Resources

ESF 12-Energy

ESF 13-Public Safety & Security

ESF 14-Cross-Sector Business & Infrastructure

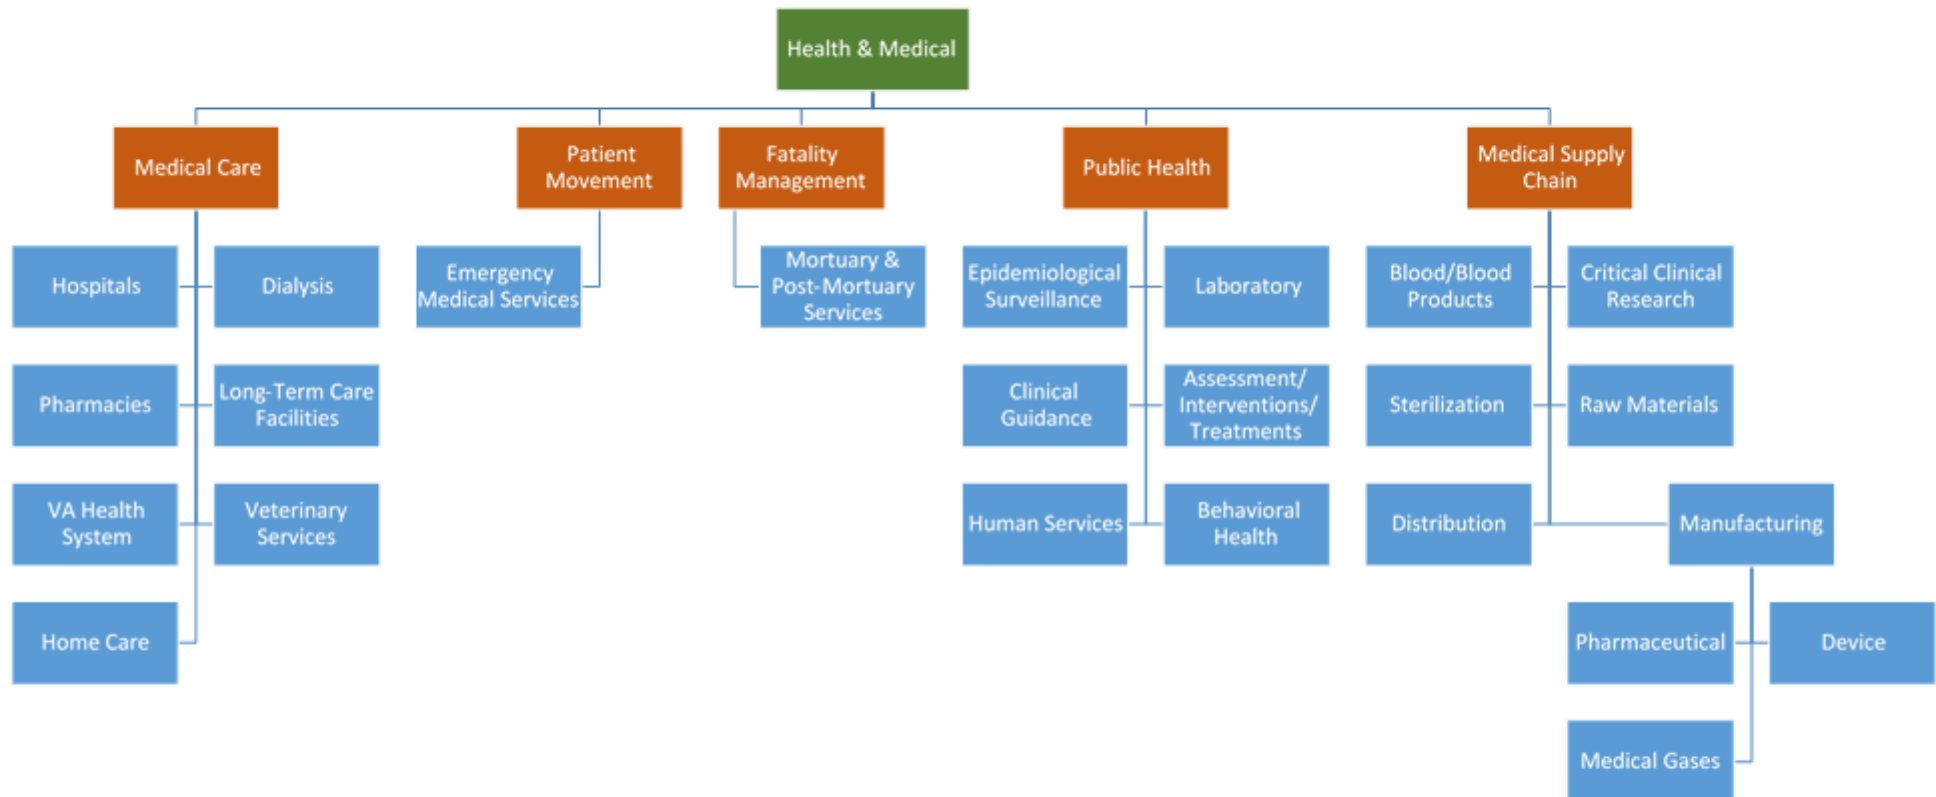

ESF 15-External Affairs

Cheyenne/Laramie County Emergency Operations Plan

Infrastructure and service providers for medical care, public health, patient movement, fatality management, behavioral health, veterinary support, and the medical industry.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation

ESF 2-Communications

ESF 3-Public Works & Engineering

ESF 4-Fire Fighting

ESF 5-Information & Planning

ESF 6-Mass Care, Emergency Assistance, Temporary Housing & Human Services

ESF 7-Logistics

ESF 8-Public Health & Medical Services

ESF 11-Agriculture & Natural Resources

ESF 12-Energy

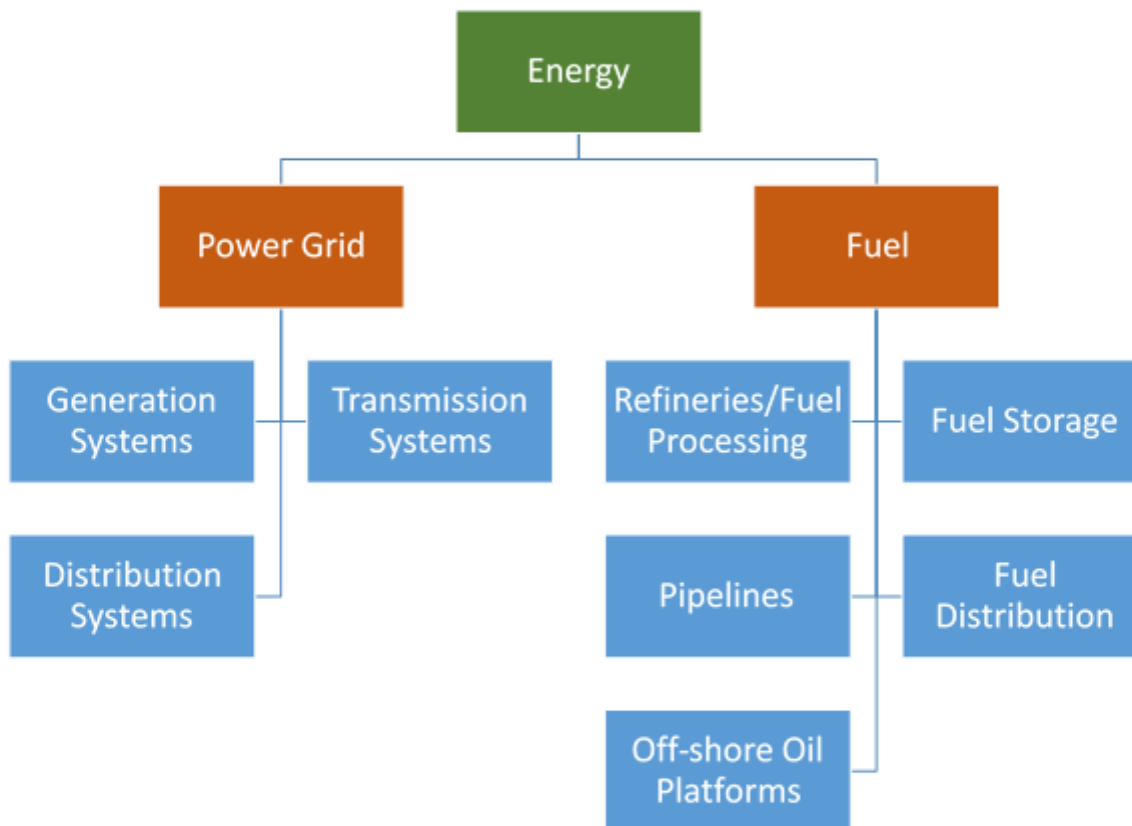

ESF 14-Cross-Sector Business & Infrastructure

ESF 15-External Affairs

Electricity service providers and generation, transmission, and distribution infrastructure, as well as gas and liquid fuel processing, and delivery systems.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation
ESF 2-Communications
ESF 3-Public Works & Engineering
ESF 4-Fire Fighting
ESF 5-Information & Planning

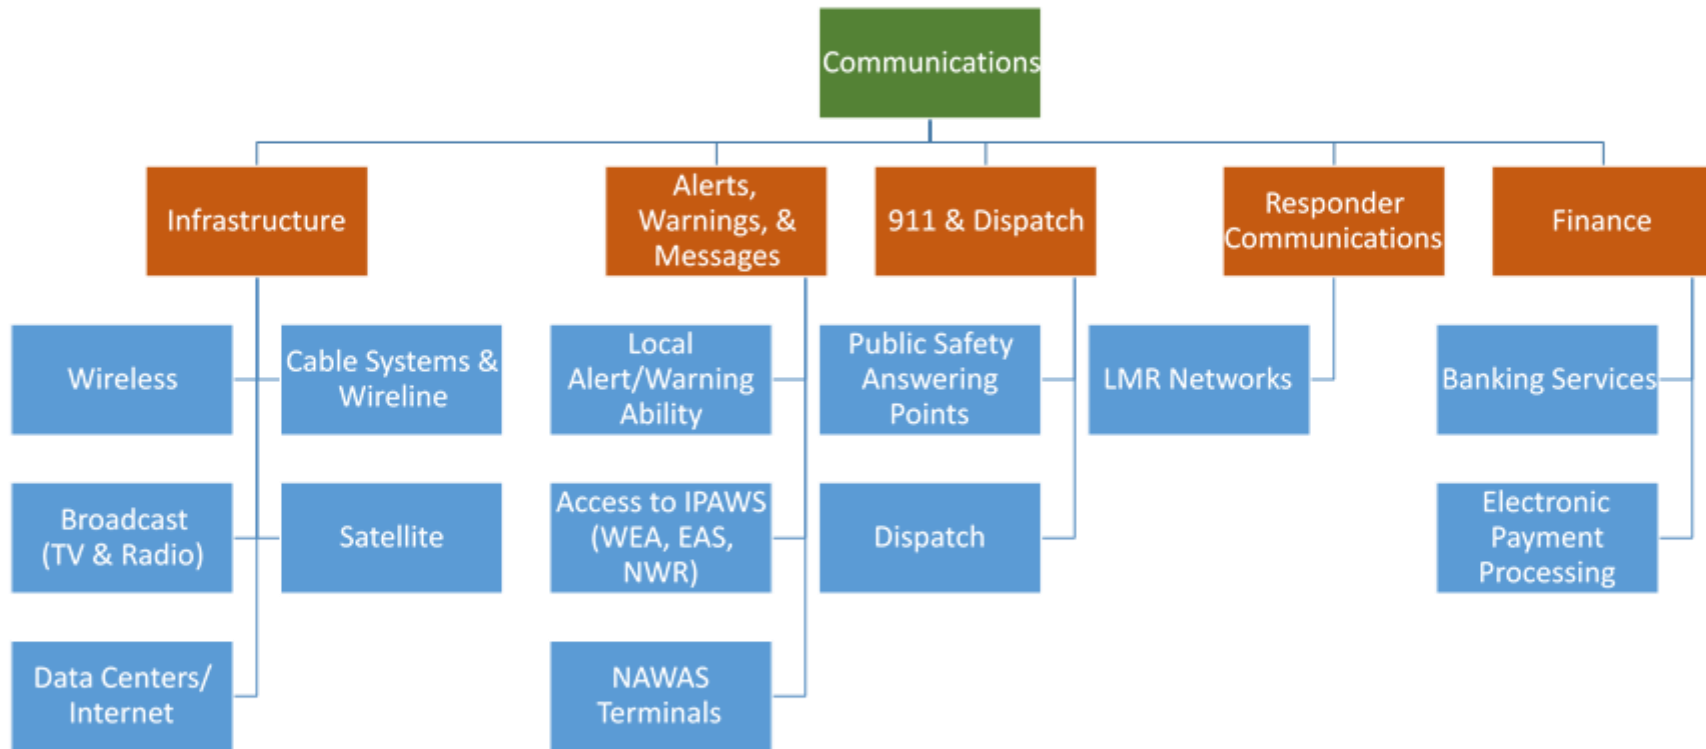

ESF 7-Logistics
ESF 10-Oil & Hazrdous Materials Response
ESF 12-Energy
ESF 13-Public Safety & Security
ESF 14-Cross-Sector Business & Infrastructure

Cheyenne/Laramie County Emergency Operations Plan

Infrastructure owners and operators of broadband internet, cellular and landline telephone networks, cable services, satellite communications services, and broadcast networks (radio/television). These systems encompass diverse modes of delivery, often intertwined but largely operating independently. Services include alerts, warnings, and messages, 911 and dispatch, and access to financial services.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation
ESF 2-Communications
ESF 3-Public Works & Engineering
ESF 4-Fire Fighting
ESF 5-Information & Planning

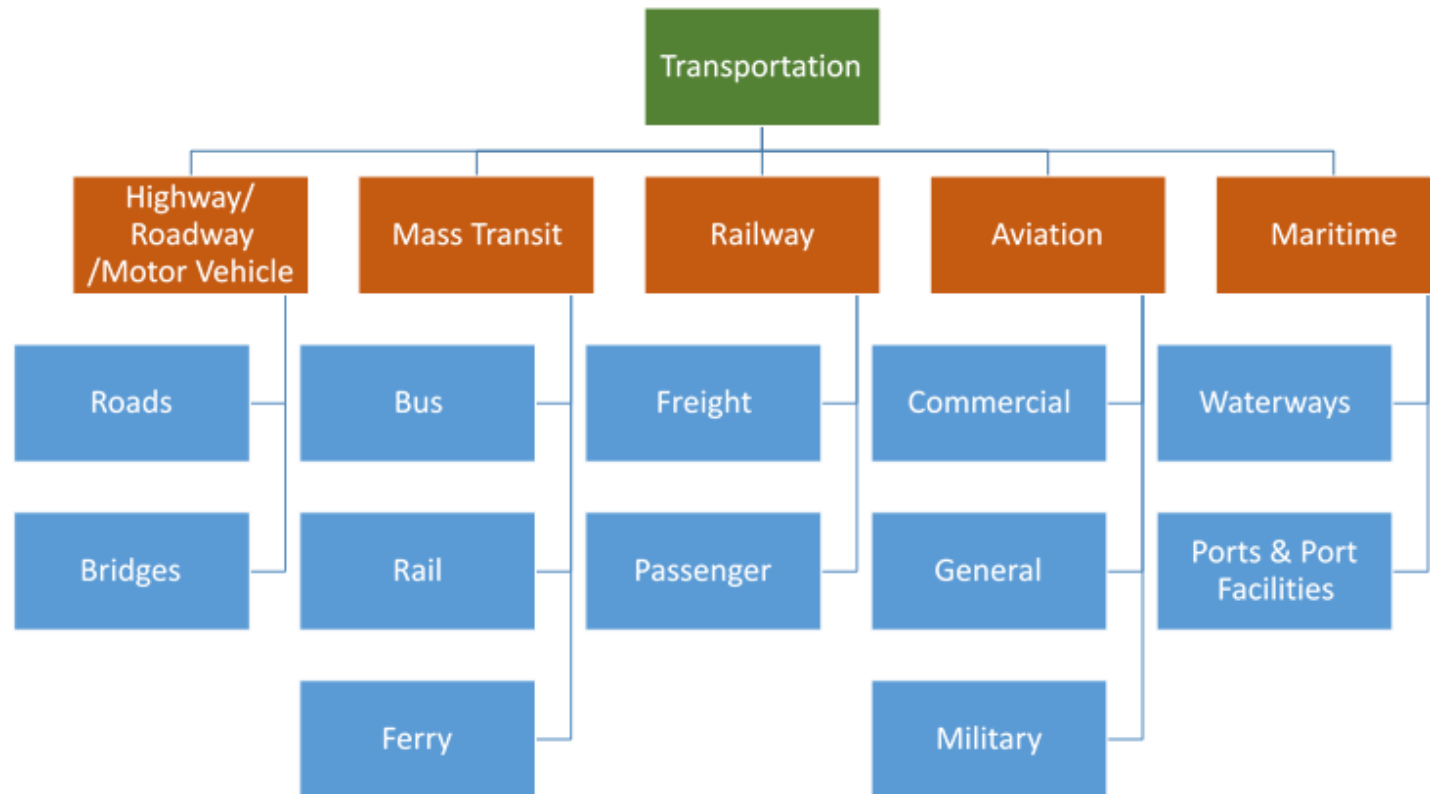

ESF 7-Logistics
ESF 12-Energy
ESF 13-Public Safety & Security
ESF 14-Cross-Sector Business & Infrastructure
ESF 15-External Affairs

Cheyenne/Laramie County Emergency Operations Plan

Multiple modes of transportation that often serve complementary functions and create redundancy, adding to the resilience in overall transportation networks. This includes roadway, mass transit, railway, aviation, maritime, and intermodal systems.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation

ESF 2-Communications

ESF 3-Public Works & Engineering

ESF 4-Fire Fighting

ESF 5-Information & Planning

ESF 7-Logistics

ESF 12-Energy

ESF 13-Public Safety & Security

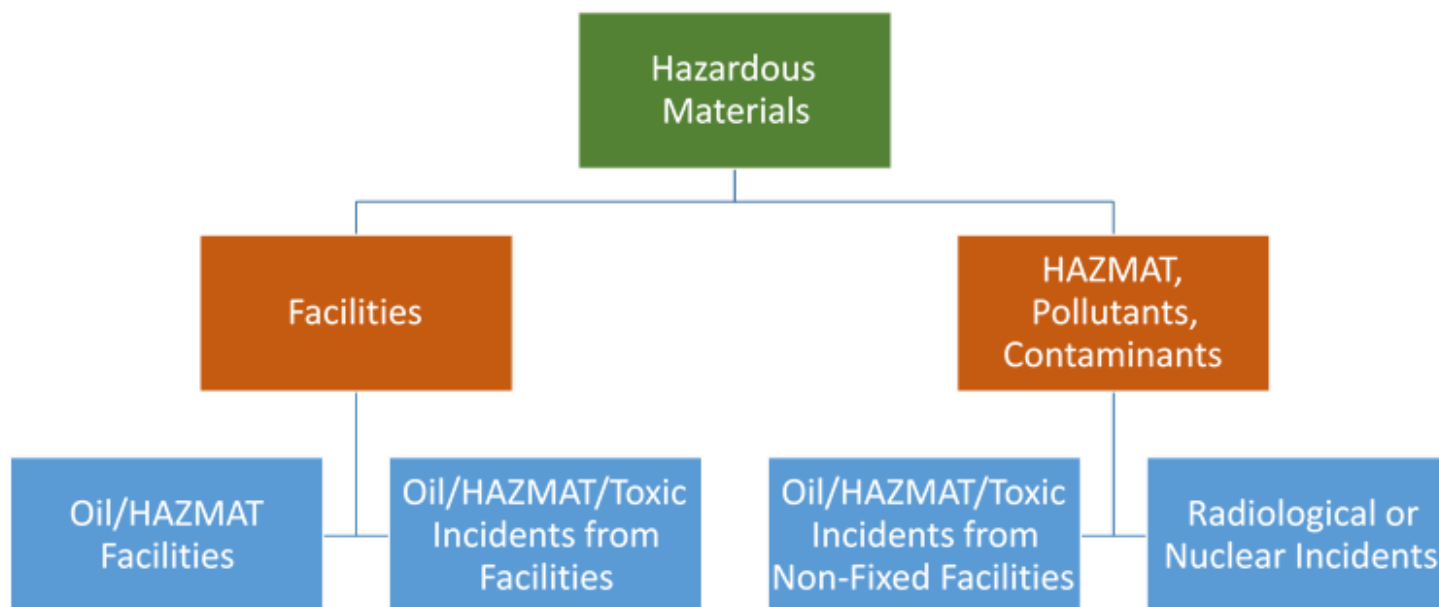

ESF 14-Cross-Sector Business & Infrastructure

ESF 15-External Affairs

Systems that mitigate threats to public health or the environment. This includes facilities that generate or store hazardous substances, as well as all specialized conveyance assets and capabilities to identify, contain, and remove pollution, contaminants, oil, or other hazardous materials and substances.

The **components**, just like the **lifelines**, are fixed. The **subcomponents** provided in the chart can be adjusted as necessary. Not every incident will impact all of the lifelines or components.

Emergency Support Functions are used as the “means” of accomplishing the successful stabilization of the lifeline. The following list are suggested ESFs that can be utilized for stabilization of the lifeline and is not definitive.

ESF 1-Transportation
ESF 2-Communications
ESF 3-Public Works & Engineering
ESF 4-Fire Fighting
ESF 5-Information & Planning
ESF 7-Logistics
ESF 8-Public Health & Medical Services

ESF 9-Search & Rescue
ESF 10-Oil & Hazardous Materials Response
ESF 11-Agriculture & Natural Resources
ESF 12-Energy
ESF 13-Public Safety & Security
ESF 14-Cross-Sector Business & Infrastructure
ESF 15-External Affairs

Lines of Effort (LOEs) are the operationalization of core capabilities (the ways) for response and recovery planning and operations. Core Capabilities are the general competencies required during response used for preparedness assessment. Lifelines identify source of instability, whereas LOEs address solutions to resolve lifeline instability.

Planning for the delivery of each LOE allows the development of strategy across all required ESFs to mobilize, employ, and demobilize resources applicable to that mission, including the identification of key intermediate objectives or milestones in the execution of that mission. LOEs are intended to jump-start crisis action (adaptive) planning. LOEs help incident personnel at all levels to visualize how federal interagency capabilities can support lifeline stabilization by clearly articulating and communicating the strategy to meet federal assistance requests.

All ten FEMA Regions have agreed upon 17 standard Lines of Effort however additional Lines of Effort may be used or created based on region or incident.

LINES OF EFFORT

- | | | |
|---|--|---|
| • Damage Assessment | • Healthcare Systems & Support | • Restoration of Public Infrastructure |
| • Debris Management | • Medical Transportation | • Search & Rescue |
| • Emergency Repairs or Augmentation to Infrastructure | • Natural & Cultural Resource Protection & Restoration | • Sheltering Operations |
| • Evacuation, Reception, Re-entry, & Return | • Private Sector Coordination | • Temporary Emergency Power |
| • Fatality Management | • Public Information & Warning | • Temporary Housing (Repair, Rental Assistance, Direct Housing) |
| • Hazardous Waste | • Responder Security & Protection | |

Core Capabilities (The Ways)

In the *National Preparedness Goal (NPG)*, FEMA has identified 32 areas that are critical to the emergency support functions. These capabilities are referenced in many national preparedness efforts, including the National Planning Frameworks. The Goal grouped the capabilities into five mission areas, based on where they most logically fit. Some fall into only one mission area, while some others apply to several mission areas.

Response core capabilities describe the grouping of response actions that can be taken to stabilize and re-establish the lifelines. FEMA executes lines of effort (LOE) to operationalize the core capabilities for response and recovery planning and operations.

Core Capabilities Descriptions (Alpha)

ACCESS CONTROL AND IDENTITY VERIFICATION

- **Mission Area:** Protection
- **Description:** Apply and support necessary physical, technological, and cyber measures to control admittance to critical locations and systems.

COMMUNITY RESILIENCE

- **Mission Area:** Mitigation
- **Description:** Enable the recognition, understanding, communication of, and planning for risk and empower individuals and communities to make informed risk management decisions necessary to adapt to, withstand, and quickly recover from future incidents.

CRITICAL TRANSPORTATION

- **Mission Area:** Response
- **Description:** Provide transportation (including infrastructure access and accessible transportation services) for response priority objectives, including the evacuation of people and animals, and the delivery of vital response personnel, equipment, and services into the affected areas.

CYBERSECURITY

- **Mission Area:** Protection
- **Description:** Protect (and if needed, restore) electronic communications systems, information and services from damage, unauthorized use, and exploitation.

ECONOMIC RECOVERY

- **Mission Area:** Recovery
- **Description:** Return economic and business activities (including food and agriculture) to a healthy state and develop new business and employment opportunities that result in a sustainable and economically viable community.

ENVIRONMENTAL RESPONSE/HEALTH AND SAFETY

- **Mission Area:** Response
- **Description:** Conduct appropriate measures to ensure the protection of the health and safety of the public and workers, as well as the environment, from all-hazards in support of responder operations and the affected communities.

FATALITY MANAGEMENT SERVICES

- **Mission Area:** Response
- **Description:** Provide fatality management services, including decedent remains recovery and victim identification, working with local, state, tribal, territorial, insular area, and Federal authorities to provide mortuary processes, temporary storage or permanent internment solutions, sharing information with mass care services for the purpose of reunifying family members and caregivers with missing persons/remains, and providing counseling to the bereaved.

FIRE MANAGEMENT AND SUPPRESSION

- **Mission Area:** Response
- **Description:** Provide structural, wildland, and specialized firefighting capabilities to manage and suppress fires of all types, kinds, and complexities while protecting the lives, property, and the environment in the affected areas.

FORENSICS AND ATTRIBUTION

- **Mission Area:** Prevention
- **Description:** Conduct forensic analysis and attribute terrorist acts (including the means and methods of terrorism) to their source, to include forensic analysis as well as attribution for an attack and for the preparation for an attack in an effort to prevent initial or follow-on acts and/or swiftly develop counter-options.

HEALTH AND SOCIAL SERVICES

- **Mission Area:** Recovery
- **Description:** Restore and improve health and social services capabilities and networks to promote the resilience, independence, health (including behavioral health), and well-being of the whole community.

HOUSING

- **Mission Area:** Recovery
- **Description:** Implement housing solutions that effectively support the needs of the whole community and contribute to its sustainability and resilience.

INFRASTRUCTURE SYSTEMS

- **Mission Area:** Response, Recovery
- **Description:** Stabilize critical infrastructure functions, minimize health and safety threats, and efficiently restore and revitalize systems and services to support a viable, resilient community.

INTELLIGENCE AND INFORMATION SHARING

- **Mission Areas:** Prevention, Protection
- **Description:** Provide timely, accurate, and actionable information resulting from the planning, direction, collection, exploitation, processing, analysis, production, dissemination, evaluation, and feedback of available information concerning physical or cyber threats to the United States, its people, property, or interests; the development, proliferation, or use of WMDs; or any other matter bearing on U.S. national or homeland security by Federal, state, local, and other stakeholders. Information sharing is the ability to exchange intelligence, information, data, or knowledge among Federal, state, local, or private sector entities, as appropriate.

INTERDICTION AND DISRUPTION

- **Mission Areas:** Prevention, Protection
- **Description:** Delay, divert, intercept, halt, apprehend, or secure threats and/or hazards.

LOGISTICS AND SUPPLY CHAIN MANAGEMENT

- **Mission Area:** Response
- **Description:** Deliver essential commodities, equipment, and services in support of impacted communities and survivors, to include emergency power and fuel support, as well as the coordination for access to community staples. Synchronize logistics capabilities and enable the restoration of impacted supply chains.

LONG-TERM VULNERABILITY REDUCTION

- **Mission Area:** Mitigation
- **Description:** Build and sustain resilient systems, communities, and critical infrastructure and key resources lifelines so as to reduce their vulnerability to natural, technological, and human-caused threats and hazards by lessening the likelihood, severity, and duration of the adverse consequences.

MASS CARE SERVICES

- **Mission Area:** Response
- **Description:** Provide life-sustaining and human services to the affected population to include hydration, feeding, sheltering, temporary housing, evacuee support, reunification, and distribution of emergency supplies.

MASS SEARCH AND RESCUE OPERATIONS

- **Mission Area:** Response
- **Description:** Deliver traditional and atypical search and rescue capabilities, including personnel, services, animals, and assets to survivors in need, with the goal of saving the greatest number of endangered lives in the shortest time possible.

NATURAL AND CULTURAL RESOURCES

- **Mission Area:** Recovery
- **Description:** Protect natural and cultural resources and historic properties through appropriate planning, mitigation, response, and recovery actions to preserve, conserve, rehabilitate, and restore them consistent with post-disaster community priorities and best practices and in compliance with applicable environmental and historical preservation laws and executive orders.

ON-SCENE SECURITY AND PROTECTION

- **Mission Area:** Response
- **Description:** Ensure a safe and secure environment through law enforcement and related security and protection operations for people and communities located within affected areas and also for response personnel engaged in lifesaving and life-sustaining operations.

OPERATIONAL COMMUNICATIONS

- **Mission Area:** Response
- **Description:** Ensure the capacity for timely communications in support of security, situational awareness, and operations by any and all means available, among and between affected communities in the impact area and all response forces.

OPERATIONAL COORDINATION

- **Mission Areas:** All
- **Description:** Establish and maintain a unified and coordinated operational structure and process that appropriately integrates all critical stakeholders and supports the execution of core capabilities.

PHYSICAL PROTECTIVE MEASURES

- **Mission Area:** Protection

- **Description:** Implement and maintain risk-informed countermeasures, and policies protecting people, borders, structures, materials, products, and systems associated with key operational activities and critical infrastructure sectors.

PLANNING

- **Mission Areas:** All

- **Description:** Conduct a systematic process engaging the whole community as appropriate in the development of executable strategic, operational, and/or community-based approaches to meet defined objectives.

PUBLIC HEALTH AND MEDICAL SERVICES

- **Mission Area:** Response

- **Description:** Provide lifesaving medical treatment via Emergency Medical Services and related operations and avoid additional disease and injury by providing targeted public health and medical support and products to all affected population.

PUBLIC INFORMATION AND WARNING

- **Mission Areas:** All

- **Description:** Deliver coordinated, prompt, reliable, and actionable information to the whole community through the use of clear, consistent, accessible, and culturally and linguistically appropriate methods to effectively relay information regarding any threat or hazard, as well as the actions being taken and the assistance being made available, as appropriate.

RISK AND DISASTER RESILIENCE ASSESSMENT

- **Mission Area:** Mitigation

- **Description:** Assess risk and disaster resilience so that decision makers, responders, and community members can take informed action to reduce their entity's risk and increase their resilience.

RISK MANAGEMENT FOR PROTECTION PROGRAMS AND ACTIVITIES

- **Mission Area:** Protection

- **Description:** Identify, assess, and prioritize risks to inform Protection activities, countermeasures and investments.

SCREENING, SEARCH, AND DETECTION

- **Mission Areas:** Prevention, Protection
- **Description:** Identify, discover, or locate threats and/or hazards through active and passive surveillance and search procedures. This may include the use of systematic examinations and assessments, sensor technologies, or physical investigation and intelligence.

SITUATIONAL ASSESSMENT

- **Mission Area:** Response
- **Description:** Provide all decision makers with decision-relevant information regarding the nature and extent of the hazard, any cascading effects, and the status of the response.

SUPPLY CHAIN INTEGRITY AND SECURITY

- **Mission Area:** Protection
- **Description:** Strengthen the security and resilience of the supply chain.

THREATS AND HAZARD IDENTIFICATION

- **Mission Area:** Mitigation
- **Description:** Identify the threats and hazards that occur in the geographic area; determine the frequency and magnitude; and incorporate this into analysis and planning processes so as to clearly understand the needs of a community or entity.

Emergency Support Function #1: TRANSPORTATION

The Transportation Emergency Support Function (ESF #1) ensures the coordination of transportation and transportation route restoration during and after local emergencies and disasters. In addition, it ensures transportation support for agencies requiring access and egress to significant events.

Primary Agency

- Cheyenne Transit Program
- Others as assigned by CEO

ESF #1 Coordinator

The ESF #1 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Director of Transit or designee

Support Agencies

- Laramie County School District 1
- Laramie County School District 2
- Public Works
- Building and Development departments
- Fire Services
- Law Enforcement / Public Safety

Key Response Core Capability: Critical Transportation

Responsibilities

1. ESF #1 is designed to provide transportation support to assist in local incident management. Activities within the scope of ESF#1 includes:
 - a. Coordinate transportation response in emergencies and disasters.
 - b. Report damage to transportation infrastructure as a result of the incident.
 - c. Coordinate alternate transportation services.
 - d. Coordinate the restoration and recovery of the transportation infrastructure.
 - e. Coordinate and support prevention, protection, response, recovery, and mitigation among transportation infrastructure stakeholders at the local level.
 - f. Provide first responder/family transportation.

2. Duties of support agencies:
 - a. Provide additional transportation methods and personnel
 - b. Clear transportation routes to access affected areas
 - c. Provide parking staging areas with signage
 - d. Assist with re-routing of resources
 - e. Assist with damage assessment
 - f. Maintain traffic control and flow
 - g. Assist with access/egress routes in evacuation (See Annex D – Emergency Evacuation)
 - h. Process and coordinate requests for civil transportation prior to or during an incident
 - i. Provide support resources to maintain the mission of ESF #1
 - j. Assist in coordination of transportation of elderly and special needs population
3. The ESF #1 coordinator is a member of the EOC team and will report to the EOC in any emergency requiring activation of the EOC. The ESF #1 coordinator will establish communications with all support agencies needed to assist with transportation services.
4. The coordinator will establish and maintain a list of resources and inventory needed to carry out its mission.
5. Planning Assumptions:
 - a. Damage may occur to the transportation infrastructure in the event of an emergency or disaster. The type and degree of damage will determine the effectiveness and efficiency of the response and recovery efforts.
 - b. Initial response may be difficult to coordinate but will improve with the clearing of access routes.
 - c. If demand on the transportation system exceeds the capabilities of the county, assistance will be required from the state.
6. Assist the EOC team with planning, pre-positioning and staging of transportation resources in the case of evacuation or relocation of citizens and responders.

RESPONSE

The following are criteria set forth for Emergency Support Function #1 during the response phase of an emergency.

1. Priorities of ESF #1:
 - a. Life safety
 - b. Maintain infrastructure
 - c. Provide citizen and responder assistance
 - d. Seek alternative methods of transportation

RECOVERY

The following are criteria set forth for Emergency Support Function #1 during the recovery phase of an emergency:

1. ESF #1 will continue to assess transportation infrastructure and make recommendations of restoration to the EOC and local officials.
2. The coordinator will continue to direct support agencies in transportation needs.
3. ESF #1 will coordinate the needs and progress of transportation with other emergency support functions/agencies involved in recovery.

Emergency Support Function #2: COMMUNICATIONS

The Communications Emergency Support Function (ESF #2) ensures the coordination and use of the local communications systems for the dissemination of emergency traffic and disaster information. ESF #2 coordinates the exchange of vital information between local responders, local government and all support agencies.

Primary Agency

- Laramie County Combined Communications Center
- Others as assigned by CEO

ESF #2 Coordinator

The ESF #2 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Director of Laramie County Combined Communications Center or designee

Support Agencies

- Laramie County Information Technology Department
- City of Cheyenne Information Technology Department
- Cheyenne/Laramie County Emergency Management Agency
- Amateur Radio Emergency Services (ARES)
- Radio Amateur Civil Emergency Services (RACES)
- National Weather Service (NWS)

Key Response Core Capabilities: Operational Communications, Intelligence and Information Sharing, Infrastructure Systems

Responsibilities

1. ESF #2 is responsible for:
 - a. Dispatch and directing emergency services in times of emergencies and disaster.
 - b. Coordination of the communications network in emergencies and disasters.
 - c. Reporting damage to communications infrastructure as a result of the incident.
 - d. Coordinating alternate communication methods.
 - e. Coordinate and support prevention, preparedness and mitigation among communications infrastructure users at the local level.
 - f. Being the main warning point for Laramie County providing warning and activation of the Outdoor Warning System should the system need to be manually activated.

Cheyenne/Laramie County Emergency Operations Plan

2. Duties of support agencies:
 - a. Support telecommunications/data communications
 - i. Maintain contact with local data centers that provide the necessary infrastructure to continue operations during an event or disaster.
 - b. Provide additional communication methods and personnel
 - c. Provide alternative public warning systems
 - d. Provide technology support to maintain equipment
 - e. Maintain equipment inventory
 - f. Provide current weather and atmospheric forecasts along with any changes to either of them
 - g. Assist with damage assessments of communications infrastructure
 - h. Assist with restoration and recovery of communications infrastructure
 - i. Provide support resources to maintain the mission of ESF #2
3. The ESF #2 coordinator is a member of the EOC team and will report to the EOC in any emergency requiring activation of the EOC. The ESF #2 coordinator will establish communications with all support agencies needed to assist with providing communications during an emergency or disaster.
4. The coordinator will establish and maintain a list of resources and inventory needed to carry out its mission.
5. Planning Assumptions:
 - a. Damage may occur to the communications infrastructure in the event of an emergency or disaster. The type and degree of damage will determine the effectiveness and efficiency of the response and recovery efforts.
 - b. If demand on the communication systems exceeds the capabilities of the county, assistance will be required from the state. Alternate communications systems through the Wyoming Office of Homeland Security must be coordinated through proper procedure.

RESPONSE

The following are criteria set forth for Emergency Support Function #2 during the response phase of an emergency

1. ESF #2 will provide necessary communication systems to properly disseminate information.
 - a. Alternate communications systems through the Wyoming Office of Homeland Security must be coordinated through proper procedure.
2. Priorities of ESF #2:
 - a. Life safety
 - b. Maintain communication infrastructure
 - c. Provide responder assistance
 - d. Seek alternative methods of communication

RECOVERY

The following are criteria set forth for Emergency Support Function #2 during the recovery phase of an emergency:

1. ESF #2 will continue to coordinate local actions to provide for the restoration of the telecommunications interface between local agencies, local and state governments, and with outside organizations. This includes the federal government, private nonprofit organizations, and business/industry.
 - a. Communications restoration includes radio, telecommunications, broadcast cables, and electronic networks.
2. The coordinator will continue to direct support agencies in communication needs.

Emergency Support Function #3: PUBLIC WORKS AND ENGINEERING

The Public Works & Engineering Emergency Support Function (ESF #3) defines the role of local public works and engineering departments in providing resources related to lifesaving or life protection prior to, during and following a disaster.

Primary Agency

- Public Works Department (City and/or County)
- Others as assigned by CEO

ESF #3 Coordinator

The ESF #3 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Director of Public Works or designee

Support Agencies

- Fire Departments
- Parks & Recreation
- Risk Management (City & County)
- Human Resources (City & County)
- Traffic
- Public Utilities
- Cheyenne-Laramie County Public Health
- Zoning
- Planning
- Laramie County Information Technology Department
- City of Cheyenne Information Technology Department
- ESF #10 – Oil & Hazardous Materials Response

Key Response Core Capabilities: Infrastructure Systems, Critical Transportation, Environmental Response/Health and Safety, Logistics and Supply Chain Management, Fatality Management, Mass Care Services, Mass Search and Rescue Operations

Responsibilities

1. ESF #3 is structured to provide public works and engineering-related support for the changing requirements of local incident management to include preparedness, prevention, response, recovery and mitigation actions. Activities within the scope of this function includes:
 - a. Conducting pre and post incident assessments of public works and infrastructure.
 - b. Provide technical assistance to include engineering expertise, construction management and contracting and real estate services.
 - c. Provide emergency repair of damaged infrastructure and critical facilities in coordination with elected officials and department heads.
2. Duties of support agencies:
 - a. Assist with physical debris removal and labor
 - b. Provide additional available equipment
 - c. Coordinate additional labor forces
 - d. Assist with traffic and pedestrian routing
 - e. Assist with engineering and design
 - f. Provide documentation and assessment assistance
3. The ESF #3 coordinator is a member of the EOC team and will report to the EOC in any emergency requiring activation of the EOC. The ESF #3 coordinator will establish communications with all support agencies needed to assist with public works services.
4. The ESF #3 coordinator is responsible for maintaining and updating an inventory of personnel, vehicles and equipment used in the restoration of infrastructure.
5. The coordinator will manage and provide technical advice in the clearance, removal and disposal of debris from public properties. Coordinate with ESF #10 for the management of contaminated debris.
6. The coordinator will work with the state and federal government to maintain public assistance programs involving public works.
7. Planning Assumptions:
 - a. Damage may occur to the public works infrastructure in the event of an emergency or disaster. The type and degree of damage will determine the effectiveness and efficiency of the response and recovery efforts.
 - b. Where appropriate, activities to restore infrastructure (e.g. debris removal, temporary housing mission, etc.) are closely coordinated with ESF #11 – Agriculture and Natural Resources.
 - c. The coordinator will have to assess damages and prioritize response with limited response capabilities.
 - d. If calls for assistance exceed the capabilities of public works, mutual aid from local and state agencies must be requested.

RESPONSE

The following are criteria set forth for Emergency Support Function #3 during the response phase of an emergency.

1. Identify established priorities for emergency clearance of debris to allow passage of equipment, personnel and supplies into the affected area immediately following a disaster.

2. Resource requests will be directed through the EOC and the elected official(s) with the affected jurisdiction. Private resources may be needed to assist in control and response efforts.
3. Priorities of ESF #3:
 - a. Life Safety
 - b. Emergency repair of infrastructure
 - c. Debris removal

RECOVERY

The following are criteria set forth for Emergency Support Function #3 during the recovery phase of an emergency.

1. The ESF #3 coordinator will continue to provide support during the recovery phase of disaster operations.
2. The duties of the coordinator and support agencies will not change during the recovery phase of operations. Support agencies will continue to provide assistance as needed to the ESF #3 coordinator as requested.
3. Activities to be performed during recovery operations (See responsibilities of ESF #3).
4. Identify established priorities for the clearing, repair or reconstruction of damaged transportation routes including streets, roads, bridges, ports, waterways, airfields and other vital transportation facilities.

STANDARD OPERATING PROCEDURES

The following criteria should be addressed during all phases of an emergency:

1. The Public Works Director of the affected jurisdiction will be the ESF #3 coordinator. In cases where multiple jurisdictions are affected, a unified command structure will be utilized. The unified command will make joint decisions and provide joint priorities during all phases of emergency management.
2. The ESF #3 coordinator will work with any and all support agencies to provide the needed assistance to perform the required operations.
3. The ESF #3 coordinator will provide assistance to all other ESF's that may require physical or technical assistance to perform their function.
4. The ESF #3 coordinator will work with Human Resources to ensure 24-hour staffing patterns for the restoration of infrastructure operations immediately following a disaster.
5. The ESF #3 coordinator will assist the EOC to provide procedures for the restoration of critical public services and facilities.
6. The ESF #3 coordinator will provide procedures for the demolition or stabilization of damaged structures and facilities designated as immediate hazards to public health and safety.
7. The ESF #3 coordinator will provide for the pre-positioning of resources when it becomes apparent that skilled construction workers, engineers, vehicles and construction materials will be necessary.
8. The ESF #3 coordinator will assist in implementation of structural and infrastructure mitigation efforts before, during and after a disaster.

Emergency Support Function #4: FIRE FIGHTING

The Fire Fighting Emergency Support Function (ESF #4) coordinates response to fires, rescue, medical assistance, extrication, mass casualty incidents as well as warning and evacuation prior to a disaster. ESF #4 coordinates the fire response to any disaster.

Primary Agency

- Fire Department/Fire District
- Others as assigned by CEO

ESF #4 Coordinator

The ESF #4 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Fire Chief(s) of the affected jurisdiction(s) or liaison

Support Agencies

- City of Cheyenne Public Works
- Laramie County Public Works
- Cheyenne-Laramie County Public Health
- Laramie County Fire Warden's Office
- Risk Management (City & County)
- ESF #2 (Communications)
- ESF #9 (Search & Rescue)
- ESF #10 (Oil & Hazardous Materials Response)
- ESF #13 (Public Safety & Security)

Key Response Core Capabilities: Fire Management and Suppression, Situational Assessment, Infrastructure Systems, Operational Communications, Critical Transportation, Mass Search and Rescue Operations, Public Health and Medical Services

Responsibilities

1. ESF #4 is charged with life safety and protection/minimization of damage to property by providing emergency services to the following incident types:
 - a. Suppression of wildland, rural and urban fires
 - b. Emergency medical assistance
 - c. Terrorism/WMD response
 - d. Rescue/extrication services
 - e. Mass casualty events
 - f. Aircraft accidents
 - g. Warning and evacuation

Cheyenne/Laramie County Emergency Operations Plan

2. Duties of support agencies:
 - a. Provide technical assistance with structural and engineering needs
 - b. Provide heavy equipment and operators to assist in rescue operations
 - c. Provide assistance with public medical and mass casualty response
 - d. Provide communications support
 - e. Coordinate the use of fire services in search and rescue operations
 - f. Assist in public safety needs
 - g. Provide technical assistance in risks involved in fire response and employee safety
 - h. Provide the reference location of an inventory of vehicles and equipment that will be available for firefighting activities, including the last date of revision.
3. The ESF #4 coordinator is a member of the EOC team and will report to the EOC in any emergency requiring activation of the EOC. The coordinator will establish communications with all support agencies needed to complete the duties of ESF #4.
4. The ESF #4 coordinator is responsible for maintaining and updating an inventory of personnel, vehicles and equipment being used or are available for firefighting activities during a disaster.
5. Each fire department is responsible for providing fire/rescue functions for its jurisdictional area and for assisting in providing service outside its jurisdictional area as per oral agreement, mutual aid agreements, and/or memorandums of understanding.
6. The Laramie County Fire Warden or their designee will coordinate any wildland or rural fire response requests to and from the Division of Forestry through the EOC and the CEO.
7. If the emergency expands beyond the jurisdictional boundaries or beyond the capabilities of the fire department within its jurisdiction, additional resources and/or requests for assistance will be routed through the LCCCC and coordinated through the ESF #4 coordinator.
8. Planning Assumptions:
 - a. Fire departments having local jurisdiction have the primary responsibility and capability or mechanism in place to respond to emergencies within their respective jurisdiction.
 - b. All fire departments within Cheyenne and Laramie County participate in a mutual aid agreement whereby resources can be requested to respond to emergencies outside of their jurisdictions.
 - c. Fire departments can expect assistance from other city and county agencies upon request.
 - d. Training levels and levels of expertise vary among departments within the county. Special operations response such as Hazmat, Terrorism/WMD and aircraft accidents will require mutual aid responses by the jurisdiction most capable of mitigating the incident.
 - e. ICS is utilized by all fire departments within Cheyenne and Laramie County.
 - f. Vulnerabilities:
 - i. Insufficient operating budgets
 - ii. Need for continued and updated training due to hazard increase
 - iii. Inadequate water supply in many areas of the county
 - iv. Lack of specialized equipment in some departments
 - v. Equipment failures
 - vi. Limited manpower for extended operations
 - vii. Extended response times to outlying areas
 - viii. Weather related problems affecting response and recovery

RESPONSE

The following are criteria set forth for Emergency Support Function #4 during the response phase of an emergency or disaster:

1. Priorities of ESF #4:
 - a. Life safety
 - b. Minimize property damage
2. On-scene operations will coordinate with the Cheyenne/Laramie County Emergency Operations Center through standard communications networks or networks provided by ESF #2 (Communications).

Emergency Support Function #5: INFORMATION & PLANNING

Information and Planning Emergency Support Function (ESF #5) is coordinated by Emergency Management and supports overall activities of the local governments within Cheyenne and Laramie County for local jurisdiction incident management. ESF #5 provides the core management and administrative functions in support of Emergency Management activities, Emergency Operations Center, Joint Information Center, and other agencies and departments.

Primary Agency

- Cheyenne/Laramie County Emergency Management Agency

ESF #5 Coordinator

The ESF #5 Coordinator(s) staffs a position in the EOC and monitors potential or developing incidents and supports the efforts of regional and field operations.

- Emergency Management Staff

Support Agencies

- All agencies involved in local preparedness, response, recovery, mitigation and security efforts.

Key Response Core Capabilities: Situational Assessment, Public Information & Warning, Operational Coordination, Intelligence & Information Sharing, Risk & Disaster Resilience Assessment, Threats & Hazard Identification, Operational Communications

Responsibilities

1. ESF #5 is responsible for coordinating resources to meet the core capabilities outlined in the National Response Framework and in turn support the 5 Mission Areas. ESF #5 will provide additional coordination of:
 - a. Public Warning and Emergency Information
 - b. Emergency Communications
 - c. Damage Assessments
 - d. Individual Family Assistance
 - e. Continuity of Government

2. The ESF #5 Coordinator is a member of the Chief Elected Official(s) staff and will:
 - a. Develop Standard Operating Procedures for opening and staffing the EOC in times of disaster.
 - b. Provide emergency communications within the EOC.
 - c. Coordinate information within the EOC and help facilitate local officials in decision making.
 - d. Act as a liaison to the State and Federal partners.

Organizational Structure

Command Support: ESF #5 supports the command function by assisting command and general staff with incident action planning activities, information gathering, administrative tasks, logistics coordination, and financial support functions.

Operations: ESF #5 provides assistance to the Operations Section Chief and Operations Branch Director positions to:

- Coordinate the Human Services, Infrastructure Support, Emergency Services, and Mitigation and Community Recovery Branches (various ESF's also provide key staff for these areas)
- Process requests for assistance
- Initiate and manage the mission assignment and/or the reimbursement agreement.

Planning: ESF #5 assists the Planning Section Chief and Planning Branch Director by assisting with the collection, evaluation, dissemination, and use of information as it pertains to the prevention, response actions, and status of resources for the incident. The Planning Section is responsible for the local incident action planning process for each operational period. Preparation includes:

- Documenting incident priorities
- Establishing the operational period and tempo
- Developing contingency, long-term, demobilization, and other plans related to the incident as needed.
- Coordinates with the Wyoming Office of Homeland Security and other agencies with special technical capabilities to request support for geospatial intelligence, modeling and forecasting.

Logistics: ESF #5 assists the staff of the Logistics Section Chief to manage the control and accountability of local supplies and equipment. The Logistics Section coordinates closely with ESF #7 (Logistics) and implements the Logistics Management Support Annex. The management of resources includes:

- Resource ordering
- Delivery of equipment, supplies, and services
- Resource tracking
- Assistance with facility location and operations
- Transportation coordination
- Operation of information technology systems and other administrative services.

The Logistics Section Chief also coordinates with the Wyoming Office of Homeland Security, as necessary, to identify and deploy State assets.

Finance/Administration: ESF #5 assists staff for the Finance and Administration Section Chief to monitor funding requirements and incident costs. The Finance/Administration Section is responsible for employee services, including security for personnel, facilities and assets.

Mission Areas

1. **Prevention:** The capabilities necessary to avoid, prevent, or stop a threatened or actual act of terrorism.
2. **Protection:** The capabilities necessary to secure the homeland against acts of terrorism and manmade or natural disasters.
3. **Mitigation:** The capabilities necessary to reduce loss of life and property by lessening the impact of disasters.
4. **Response:** The capabilities necessary to save lives, protect property and the environment, and meet basic human needs after an incident has occurred.
5. **Recovery:** The capabilities necessary to assist communities affected by an incident to recover effectively.

Emergency Support Function #6: MASS CARE, EMERGENCY ASSISTANCE, TEMPORARY HOUSING, AND HUMAN SERVICES

The Mass Care, Emergency Assistance, Temporary Housing, and Human Services Emergency Support Function (ESF #6) supports local and NGO efforts to address non-medical mass care, provide emergency assistance, temporary housing, and human services needs of individuals and/or families impacted by incidents of local significance.

Primary Agency

- American Red Cross
- Other as assigned by CEO

ESF #6 Coordinator

The ESF #6 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- American Red Cross Director or designee

Support Agencies

- Cheyenne/Laramie County Emergency Management Agency
- Laramie County School District #1
- Laramie County School District #2
- ESF #2 (Communications)
- ESF #3 (Public Works and Engineering)
- ESF #5 (Information and Planning)
- ESF #7 (Logistics Management and Resource Support)
- ESF #8 (Public Health and Emergency Medical Services)
- ESF #11 (Agriculture and Natural Resources)
- Cheyenne Kiwanis Club
- Salvation Army
- Cheyenne-Laramie County Public Health
- NGO's providing assistance to disaster victims

Concept of Operations

Initial response activities focus on meeting urgent mass care needs of victims. Recovery efforts can be initiated concurrently with response activities. Close coordination is required among those local agencies and NGOs participating in response and recovery operations.

Key Response Core Capabilities: Mass Care Services; Logistics & Supply Chain Management; Public Health & Medical Services; Critical Transportation; Fatality Management Services; Housing

Responsibilities

All agencies under ESF #6 work together to provide life-sustaining assistance to victims. The four primary functions for ESF #6 and what each area covers are:

1. Mass Care:
 - a. Sheltering
 - i. Emergency sheltering includes the use of pre-identified shelter sites in existing structures, creation of temporary facilities or use of similar facilities should evacuation be necessary.
 - b. Feeding
 - i. Feeding is provided to victims through a combination of fixed sites, mobile feeding units and bulk distribution of food.
 - ii. In Laramie County, most food provisions will be provided by NGOs and coordinated through ESF #6.
 - c. Other supporting activities to support emergency needs of victims
 - i. Setup and coordinate bulk distribution sites with local government entities and NGOs
 1. Distribution of emergency relief items needed to meet urgent needs are distributed through these sites and established within the affected area.
 - ii. Reunification of families
 1. Disaster Welfare Information (DWI) collects and provides information regarding individuals within the affected area to immediate family members which also aids the reunification process.
2. Emergency Assistance:
 - a. Coordination of voluntary organizations and unaffiliated volunteers
 - b. Organizing and coordinating donations both solicited and unsolicited
 - c. Coordinate emergency first aid consisting of basic first aid and referral to appropriate medical personnel at designated sites
 - d. Providing support to individuals with disabilities and others with access and functional needs
 - e. Coordinating non-congregate and transitional sheltering
 - f. Provide support to children in disasters
 - g. Coordinate support for mass evacuations
 - h. Provide support for the rescue, transportation, care, shelter, and essential needs of household pets and service animals
 - i. Coordination of federal assistance in support of non-medical mass care services and gathering information related to sheltering and feeding in the impacted area
3. Temporary Housing:
 - a. Addresses both short and long term housing assistance
 - b. Identification and provision of safe, secure, functional and physically-accessible housing
 - c. Identify a plan of action to provide housing assistance

4. Human Services
 - a. Coordinate disaster assistance programs that help survivors address unmet disaster caused needs and/or non-housing losses through loans and grants
 - b. Coordinate and provide:
 - i. Supplemental nutrition assistance
 - ii. Crisis counseling
 - iii. Disaster case management
 - iv. Disaster unemployment
 - v. Disaster legal services
 - vi. Other state and Federal human services programs and benefits to survivors
5. Duties of support agencies:
 - a. Provide additional support and coordination to meet the responsibilities of ESF #6.
 - b. ESF #8 and ESF #11 will assist with the coordination of mass care services to provide for the safety and well-being of individuals with access and functional needs support during evacuations and sheltering.
 - c. Household Pets and Service Animals
 - i. The local response community recognizes the varying and special requirements of individuals that require and utilize service animals and is committed to ensuring that the physical and mental health needs of these individuals are appropriately addressed and that the individuals and service animals remain together during to the maximum extent possible during the evacuation, transport, sheltering, or the delivery of other services and in accordance with the requirements of the ADA.

RESPONSE

The following are criteria set forth for Emergency Support Function #6 during the response phase of an emergency.

1. Priorities of ESF #6:
 - a. Life Safety
 - b. Food and Sheltering
 - c. Safety of citizens

RECOVERY

The following are criteria set forth for Emergency Support Function #6 during the recovery phase of an emergency:

1. ESF #6 will continue to assess and coordinate required resources through the transition from the Response to Recovery phase.
2. The coordinator will continue to direct support agencies in transportation needs.

Emergency Support Function #7: LOGISTICS

The Logistics Emergency Support Function (ESF #7) will provide logistical and resource support to response agencies which is critical in their efforts to respond and recover from natural or man-made disasters. Local government is responsible for ensuring that all necessary resources are available to local agencies either through the use of local resources or by obtaining assistance from the state or other agencies. The resource support function outlines those actions local government will take to provide direct and active support to emergency response and recovery efforts during and after an emergency.

Primary Agency

- Cheyenne/Laramie County Emergency Management Agency
- Logistics Section Chief

ESF #7 Coordinator

The ESF #7 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Emergency Manager or designee

Support Agencies

- Laramie County Information Technology Department
- City of Cheyenne Information Technology Department
- Facilities Maintenance
- Budget and Finance
- Local elected officials
- Human Resources (City & County)
- Cheyenne and Laramie County Attorneys' Offices

Key Response Core Capabilities: Mass Care Services; Critical Transportation; Infrastructure Systems; Operation Communications; Logistics and Supply Chain Management; Natural and Cultural Resources; Supply Chain Integrity and Security

Responsibilities

1. ESF #7 has three (3) primary goals during an event:
 - a. ESF #7 will maintain a database of emergency services equipment, including Fire, EMS, Law Enforcement, Public Works, and Health Department resources available for mutual aid response in and/or near Laramie County.
 - b. Assist other agencies in the location of facilities space, office equipment, office supplies, telecommunications, personnel and needed supplies to assist disaster victims during the recovery phase.
 - c. ESF #7 will locate, order, procure and/or obtain needed resources for responding to and mitigating the effects of a disaster.
2. ESF #7 will route requests for supplies through local governments and local NGO's to assist emergency services.
3. Coordinate with finance to confirm procurement and payment for supplies used in disaster response and recovery.
4. Coordinate with local elected officials and legal services to contract, review and approve disaster response and recovery logistical support.
5. Coordinate with Logistics at the state level to procure equipment and supplies not available at the local level.

Emergency Support Function #8: PUBLIC HEALTH AND MEDICAL SERVICES

The Public Health and Medical Services Emergency Support Function (ESF #8) ensures provision of comprehensive medical care to disaster victims and victims of mass health related events including veterinary and/or animal health issues. ESF #8 provides supplemental assistance to citizens and local governments in identifying and meeting the public health and medical needs of victims.

Primary Agency

- Cheyenne-Laramie County Public Health
- Others as assigned by CEO

ESF #8 Coordinator

The ESF #8 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Cheyenne / Laramie County Public Health Executive Director or designee

Support Agencies

- Local Emergency Medical Services (Private, Volunteer and Government)
- Emergency Management (ESF #5)
- Laramie County Information Technology Department
- City of Cheyenne Information Technology Department
- Cheyenne Regional Medical Center
- Fire and Rescue services
- Cheyenne Animal Shelter
- Mental Health Services/Clergy
- Laramie County Coroner

Key Response Core Capabilities: Critical Transportation; Environmental Response/Health and Safety; Fatality Management Services; Mass Care Services; Logistics and Supply Chain Management; Public Health, Healthcare, and Emergency Medical Services; Operational Communications

Responsibilities

1. ESF #8 is designed to provide for the organization, mobilization, coordination and direction of emergency medical, emergency health and medical examiner/Coroner services and resources in a disaster. Activities within the scope of ESF #8 includes:
 - a. Coordination of emergency hospital services
 - b. Facilitating the coordinated use of medical personnel and communications to provide for the care of the sick, injured, and dead resulting from a disaster.
 - c. Coordination of crisis response and mental health services for persons who suffer from reactions to the disaster.
 - d. Coordination of Critical Incident Stress Management services for emergency service workers.
 - e. Providing resources for the systems and methods required to prevent or control disease.
2. The ESF #8 coordinator will maintain mutual aid agreements to assist with care and transportation.
3. ESF #8 coordinates and maintains emergency response plans for all health related incidents.
4. The coordinator for ESF #8 along with the supporting agencies will:
 - a. Report damage assessments of public health or medical services.
 - b. Support services to public health and medical care.
 - c. Support identification of and meeting the public health and medical needs of victims.
 - d. Provide assessments of public health/medical needs:
 - i. Through public health surveillance
 - ii. For medical care personnel
 - iii. For medical equipment and supplies
 - iv. On safety and security of human drugs, biologics, and medical devices
 - v. On food safety and security
 - vi. For all hazard Public Health Assistance
 - vii. On Behavioral Health care
 - e. Provide health, disease, and injury prevention information.
 - f. Support Public Water/Wastewater and Solid Waste Disposal
 - g. Coordinate requests for medical transportation for:
 - i. Pre-hospital emergency care
 - ii. The sick and injured
 - iii. Mass casualty incidents
 - h. Activate internal recall plans in times of disaster
 - i. Establish communications with other medical providers
 - j. Coordinate additional supply and equipment needs
 - k. Coordinate pre-hospital triage of patients in mass casualty incidents.
5. Coroner/Medical Examiner services are required to:
 - a. Assure adequate death investigation, identification and disposition of bodies.
 - b. Ensure proper removal, temporary storage and transportation of bodies to temporary morgue facilities
 - c. Execute proper notification of next of kin and coordination of medical examiner services and disposition of unclaimed bodies.

Emergency Support Function #9: SEARCH AND RESCUE

The Search and Rescue Emergency Support Function (ESF #9) coordinates the deployment of certified Search and Rescue groups to provide specialized life-saving assistance during emergency events within their jurisdictions. SAR activities include locating, removing, extracting, and providing medical first aid to victims affected by emergency events.

Primary Agency

- Laramie County Sheriff's Office
- Other as assigned by CEO

ESF #9 Coordinator

The ESF #9 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Laramie County Sheriff or designee

Support Agencies

- Cheyenne/Laramie County Emergency Management Agency
- ESF #2 (Communications)
- ESF #4 (Firefighting)
- ESF #7 (Logistics)
- Local Search and Rescue groups
- Cheyenne/Laramie County GIS

Key Response Core Capabilities: Mass Search and Rescue Operations; Operational Communications; Situational Assessment

Mission Prioritization

Missions will be prioritized in accordance with the Laramie County Sheriff's Office and the SAR plan.

Responsibilities

1. ESF #9 will provide command and control coordination for search and rescue efforts in accordance with the Laramie County Search and Rescue Plan.
2. Coordinates technical expertise through local SAR groups.
3. Provide technical equipment as available through local SAR groups.
4. Provide mapping coordination for SAR groups.
5. Assist with infrastructure damage assessment.
6. Maintain a current database of SAR personnel and equipment, including qualifications and capabilities.

Emergency Support Function #10: OIL & HAZARDOUS MATERIALS

The Oil and Hazardous Materials Response Emergency Support Function (ESF #10) assists local responders for an actual or potential discharge and/or uncontrolled release of hazardous materials during emergency incidents.

Primary Agency

- Cheyenne Fire & Rescue – Hazardous Materials Team
- Laramie County Fire Districts
- Others as assigned by CEO

ESF # 10 Coordinator

The ESF #10 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Hazardous Materials Team Leader or designee

Support Agencies

- Cheyenne-Laramie County Public Health
- Health and Human Services
- Fire and Rescue Services
- Law Enforcement
- Emergency Medical Services
- NOAA – all hazards alert radio
- ESF #1 (Transportation)
- ESF #2 (Communications)
- ESF #3 (Public Works and Engineering)
- ESF #5 (Information and Planning)

Key Response Core Capabilities: Environmental Response/Health and Safety; Critical Transportation; Infrastructure Systems; Public Health and Medical Services; Situational Assessment

Responsibilities

1. ESF #10 will direct hazardous materials response, recovery and mitigation activities in accordance with:
 - a. The Hazardous Materials Response Annex (See Annex “C”)
 - b. The Hazardous Materials team protocol
 - c. Region 7 Protocol when activated by the WOHS

Cheyenne/Laramie County Emergency Operations Plan

2. ESF #10 is responsible for the coordination of:
 - a. Reporting damage assessments due to hazardous chemicals
 - b. Support response to hazardous materials incidents
 - c. Support response and recovery actions to prepare for, prevent, minimize, or mitigate a threat to public health, welfare or the environment.
 - d. Resources, personnel, and other response organizations that may be used to support the response actions.
 - e. Response and recovery actions to detect, identify, contain, clean-up, or dispose of hazardous materials (i.e. agricultural, business, and household products).
3. Duties of support agencies:
 - a. Provide technical assistance and equipment
 - b. Provide cordons to hazardous areas
 - c. Provide medical support to teams and citizens
 - d. Perform warning to citizens
 - e. Provide transportation and transportation routes during evacuation

Emergency Support Function #11: AGRICULTURE AND NATURAL RESOURCES

The Agriculture and Natural Resources Emergency Support Function (ESF #11) organizes and coordinates support for the protection of the agricultural, natural and cultural resources during man-made or natural disasters.

Primary Agency

- University of Wyoming Cooperative Extension
- Other as assigned by CEO

ESF #11 Coordinator

The ESF #11 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- County Extension Coordinator

Support Agencies

- ESF #2 (Communications)
- ESF #3 (Public Works and Engineering)
- ESF #5 (Information and Planning)
- ESF #8 (Public Health and Emergency Medical Services)
- ESF #15 (External Affairs)
- American Red Cross
- Cheyenne-Laramie County Public Health

Key Response Core Capabilities: Logistics and Supply Chain Management; Mass Care Services; Critical Transportation; Environmental Response/Health and Safety; Public Health, Healthcare, and Emergency Medical Services; Infrastructure Systems

Responsibilities

1. The ESF #11 includes five (5) primary functions:
 - a. Providing nutrition assistance needs, obtaining appropriate food supplies, arranging for delivery of the supplies and authorizing disaster food assistance programs.
 - b. Response to animal and agricultural health issues which includes implementing an integrated local and State response to an outbreak of contagious or economically devastating animal/zoonotic disease, an outbreak of a highly infective exotic plant disease, or an economically devastating plant pest infestation.
 - c. Coordinate with ESF #8 (Public Health and Medical Services) and provide technical expertise in support of animal and agricultural emergency management

Cheyenne/Laramie County Emergency Operations Plan

- d. Ensure the safety and defense of the commercial food supply through coordination with other responding agencies.
 - e. Protect Natural, Cultural Resources, and Historical Properties resources
- 2. ESF #11 shall coordinate with the ESF #11s on the State and Federal level if needed.
- 3. Duties of support agencies:
 - a. Provide additional support to ensure that the responsibilities and core capabilities for ESF #11 are met during a disaster
- 4. Food and agriculture function:
 - a. Ensure an adequate and safe food supply
 - b. Mitigate the loss of crops and livestock
 - c. Assist the County to prevent or mitigate the effects of animal and plant disease and pest response.
 - d. Provide assistance to assure the safety of the commercial food supply.

Emergency Support Function #12: ENERGY

The Energy Emergency Support Function (ESF #12) is intended to identify and restore damaged utility systems and components during an emergency incident affecting those resources. Utility outages can be expected to occur following a major disaster. Outages may also be caused by severe cold or hot weather, fuel shortages, transportation disruptions, power plant outages, transmission line and distribution problems. ESF #12 addresses the restoration of utilities back to the community as soon as possible. The private sector normally takes the lead in the rapid restoration of infrastructure related services after an incident occurs.

Primary Agency

- Board of Public Utilities (BOPU)
- Black Hills Energy (BHE)
- High West Energy (HWE)
- South Cheyenne Water and Sewer District (SCWSD)
- Others as assigned by CEO

ESF #12 Coordinator

The ESF #12 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Representative – BOPU/BHE/HWE/SCWSD

Support Agencies

- Chief Elected Officials
- ESF #3 (Public Works and Engineering)
- ESF #5 (Information and Planning)
- ESF #7 (Logistics)
- Fire and rescue services
- Private industry partners

Key Response Core Capabilities: Infrastructure Systems; Logistics and Supply Chain Management; Situational Assessment; Environmental Response/Health and Safety

Responsibilities

1. Serve as a focal point within local government for receipt of information on actual or potential damage to utility supply and distribution systems.
2. Advise Chief Elected Officials on priorities for energy restoration, assistance and supply.

Cheyenne/Laramie County Emergency Operations Plan

3. While restoration of normal operations at energy facilities is the primary responsibility of the owners of those facilities, ESF #12 provides the appropriate supplemental assistance to:
 - a. Coordinate the restoration and recovery of the communications infrastructure.
 - b. Evaluate and report damage to utility infrastructure due to an emergency and/or a disaster.
 - c. Identify supporting resources needed to restore energy systems
 - d. Monitor energy system repair work.
4. Establish a tracking system of costs involved in restoration of critical infrastructure.
5. Assist local departments and agencies by locating fuel for transportation, communications and emergency operations.
6. Recommend actions to conserve fuel and electrical power.
7. Duties of support agencies:
 - a. Participate in post incident hazard mitigation studies to reduce the adverse effects of future disasters.

Emergency Support Function #13: PUBLIC SAFETY AND SECURITY

The Public Safety and Security Emergency Support Function (ESF #13) integrates local public safety and security capabilities and resources to support the full range of law enforcement incident management and response activities in times of disaster.

Primary Agency

- Laramie County Sheriff's Office
- Cheyenne Police Department
- Pine Bluffs Police Department
- Other as assigned by CEO

ESF #13 Coordinator

The ESF #13 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Sheriff
- Chief of Police
- Other designee

Support Agencies

- ESF #2 (Communications)
- ESF #3 (Public Works and Engineering)
- ESF #4 (Firefighting)
- ESF #5 (Information and Planning)
- ESF #9 (Search and Rescue)

Key Response Core Capabilities: On-Scene Security, Protection, and Law Enforcement; Forensics and Attribution; Intelligence and Information Sharing; Interdiction and Disruption; Screening, Search, and Detection; Operational Communications; Access Control and Identity Verification; Cybersecurity; Physical Protective Measures

Responsibilities

1. It is the responsibility of head law enforcement personnel to coordinate public safety mutual aid agreements during responses including military support when provided by the Governor and State.
2. Maintain close coordination with state and federal officials to determine public safety and security support requirements and to determine resource priorities.
3. Establish and test an alerting system for law enforcement personnel.
4. Law enforcement should review and update ESF 13 periodically and revise as necessary.

Cheyenne/Laramie County Emergency Operations Plan

5. Serve as a focal point within local government for receipt and interpretation of intelligence information prior to, during and post incident.
6. Maintain communications with supporting agencies to determine capabilities. Assess the availability of resources, track and document resources that have been deployed.

RESPONSE

1. Manage support by coordinating the implementation of local authorities related to public safety, security and protection of property to include:
 - a. Evaluating and reporting public safety needs
 - b. Providing incident management for all law enforcement activities
 - c. Identifying critical infrastructure and provide protection
 - d. Security planning and technical assistance
 - e. Intelligence surveying, organization and monitoring
2. Assist in public warning and evacuation
3. Assist in placement of cordons, security lines and re-routing traffic
4. Prioritize requests for service by severity during disaster response

Emergency Support Function #14: CROSS-SECTOR BUSINESS & INFRASTRUCTURE

The Cross-Sector Business and Infrastructure Emergency Support Function (ESF #14) supports the coordination of cross-sector operations, including stabilization of key supply chains and community lifelines, among infrastructure owners, operators, businesses, and their government partners. It serves as a connection piece for entities that are not aligned to an ESF or have other means of coordination and supports growing efforts to enable collaboration among critical infrastructure sectors to mitigate cascading failures and risks.

Primary Agency

- Cheyenne/Laramie County Emergency Management Agency

ESF #14 Coordinator

The ESF #14 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Emergency Management Staff or designee

Support Agencies

- All ESFs and their support agencies may be called upon to assist depending on the needs of the incident or disaster.

Key Response Core Capabilities: Infrastructure Systems; Logistics and Supply Chain Management; Critical Transportation; Environmental Response/Health Safety; Operational Communications; Public Health, Healthcare, and Emergency Medical Services; Situational Assessment

Responsibilities

1. The primary function of ESF #14 is to align and support cross-sector operations among infrastructure owners, operators, businesses, and government partners to stabilize community lifelines, as well as any impacted critical functions.
2. Serves as the interface with businesses, industries, and critical infrastructure sectors not aligned to other ESFs.
3. Assessment, Analysis, and Situational Awareness
 - a. Supports cross-sector planning by identifying, assessing and analyzing the critical points of failure in the critical infrastructure and supply chains.
 - b. Analyze the requirements for stabilizing and restoring critical supply chains.
 - c. Provides options for emergency service restoration in coordination with other ESFs.

Cheyenne/Laramie County Emergency Operations Plan

- d. Gathers information, assesses cross-sector challenges, identifies cross-sector interdependencies, and disseminates the information to better sequence response efforts to stabilize communities, mitigate cascading affects, and meet the public needs.
4. Operational Coordination
 - a. Coordinates with ESFs and interagency partners to support private sector and infrastructure owner and operator needs and priorities, in compliance with existing regulatory and authoritative guidelines.
 - b. Recommends how offers of material goods or technical assistance and capabilities from the private sector organizations may be accepted and integrated to supplement other response efforts.
 - c. Coordinates with the respective lead agency, ESF, or field elements to integrate potential industry solutions into response operations and align public sector support with private sector business continuity, corporate response, and critical infrastructure restoration activities.

Resources

The following plans will be used to assist in meeting the responsibilities for ESF #14:

- Cheyenne/Laramie County Snow Plan
- Cheyenne/Laramie County Sheltering Plan
- Laramie County Tactical Interoperable Communications Plan (TICP)
- Laramie County Cybersecurity Plan
- Cheyenne/Laramie County Wild Fire Protection Plan
- Wyoming Region 7 Hazard Mitigation Plan
- Cheyenne/Laramie County Debris Management Plan
- Cheyenne/Laramie County Distribution Management Plan
- Cheyenne-Laramie County Public Health All Hazards Emergency Operations Plan
- Laramie County Coroner Fatalities Management Operations Plan
- Wildland Fire Management Annual Operating Plan
- BOPU Dams and Reservoirs Emergency Action Plan

Emergency Support Function #15: EXTERNAL AFFAIRS

The External Affairs Emergency Support Function (ESF #15) provides accurate, coordinated, timely, and accessible information to affected audiences, including governments, media, the private sector, and all of the local populace. The local populace would also include children; those with disabilities and other access and functional needs; and individuals with limited English proficiency. ESF #15 will also coordinate local actions to provide the required external affairs support to local incident management elements. Working with the Joint Information Center (JIC), ESF #15 establishes support positions to coordinate communications to the audiences that provide critical emergency information, crisis communications, and public affairs support.

Primary Agency

- Cheyenne/Laramie County Emergency Management Agency

ESF Coordinator

The ESF #15 coordinator(s) staffs a position in the EOC and reports to the EOC when activation occurs.

- Emergency Management Staff or designee

Support Agencies

- Public Information Officers (PIOs) (Government and Private)
- NOAA – All hazards alert radio
- American Red Cross
- Digital Information Response Team (DIRT)
- ESF #2 (Communications)
- ESF #5 (Information and Planning)
- ESF #8 (Public Health and Medical Services)
- Joint Information Center

Key Response Core Capabilities: Public Information and Warning; Operational Coordination; Intelligence and Information Sharing; Risk Management for Protection Programs and Activities; Situational Assessment

Responsibilities

1. During an incident, all authorities share responsibility for communicating information regarding the incident to the public. The ESF #15 coordinator must ensure that the following objectives are met:
 - a. Delivery of incident preparedness, health, response, and recovery instructions to those directly affected by the incident.

- b. Dissemination of incident information to the public, including children; those with disabilities and other access and functional needs; and individuals with limited English proficiency populations.
2. The ESF #15 provides a supporting mechanism to develop, coordinate, and deliver information to the public related to:
 - a. Assistance to the incident-affected area
 - b. Departmental/agency response
 - c. Other preparations
 - d. Protective measures
 - e. Impact on non-affected areas
3. ESF #15 support shall monitor, collect, analyze, and transmit information from various public information sources during an event or disaster.

STANDARD OPERATING PROCEDURES

The SOP establishes procedures and protocols for ESF #15 External Affairs to support incident management during an incident requiring a coordinated response among several different involved parties including State and Federal government. ESF #15 integrates Public Affairs, the Joint Information Center (JIC), governmental agencies, and private sector communications under the coordinating auspices of External Affairs. An activation of ESF 15 during an incident requiring a coordinated response will facilitate accurate, coordinated, and timely information to affected audiences, including governments, media, the private sector, and the local populace.

Objectives

There are two (2) objectives for the SOP in ESF #15:

1. It will be used to formulate external affairs incident action plans and procedures that will help save lives and protect the health and safety of the public, responders, and recovery workers.
2. It will be used as a framework to guide messaging to protect property; mitigate damages and impacts to individuals, communities, and the environment; and facilitate recovery information for individuals, families, businesses, governments, and the media.

Concept of Operations

Through coordination with the affected partners and other entities, ESF #15 will establish and conduct external affairs activities to support response and recovery operations. These activities and supporting organizations will be scalable and flexible with respect to the incident situation. The ESF #15 team will develop and execute an external affairs strategy to support the Incident Action Plan (IAP). A central feature of this concept, consistent with the incident command system, is a unified planning component that brings unity of effort to all strategic communications planning and product development. All participating communicators must ensure messaging reflects both unknown issues and facts as they become acknowledged. In an emergency, many issues will fall within the unknown category and communicators should be careful not to over-reassure and should note uncertainty remains. Transparency and consistent messaging across agencies is critical to public confidence and community cohesion.

Daily Operations

After establishment of ESF #15 and the roles of each participant is completed, the ESF #15 coordinator will develop a daily external affairs routing which is critical to the smooth flow of information and will assist with synchronization. Participants must be flexible and work to ensure communications objectives and initiatives are accommodated and timed for optimum delivery. A daily communications summary will be prepared by the ESF #15 team with input from all involved partners (government, private, and NGOs). These messages shall be well crafted and designed to convey the broad, overarching issues facing residents in the affected area(s). These messages should address both current and anticipated issues. The ESF #15 team shall take into consideration all forms of media outlets when crafting messages.

Cheyenne/Laramie County EOP – Incident Specific Annexes

Introduction

The Incident Annex identifies and outlines specific incidents that have the highest probability of occurring within Laramie County. Each annex provides a description of each event, the effects it could potentially have within the county and an outline of roles, responsibilities, and coordinating efforts for each type of event.

These annexes are designed to be an outline of activities implemented during each type of event in coordination with the Planning Annexes used within the Cheyenne/Laramie County jurisdiction.

Each Emergency Support Function and the agencies coordinating within them may also have internal plans they coordinate with in cooperation with the Cheyenne/Laramie County Plans.

Annex A - Earthquake

Purpose

In accordance with the Cheyenne/Laramie County Emergency Operations Plan, this annex serves the as the framework for responding to an earthquake emergency. This annex establishes a comprehensive format outlining proactive measures to be executed before, during, and immediately following a seismic event. The outlined activities within this plan are designed to facilitate a coordinated and effective response, ensuring the safety and well-being of the community while minimizing the impact of the earthquake. This document aims to provide emergency personnel with a strategic guide to navigate the complexities of an earthquake scenario, emphasizing the importance of preparedness, response coordination, and swift action in the face of such a crisis.

Nature of the Event

In coordination with the Cheyenne/Laramie County Emergency Operations Plan, it is imperative to comprehend the nature and potential ramifications of an earthquake event. Described as a sudden, violent shaking or movement of the Earth's surface, this phenomenon arises from the abrupt displacement of rock masses, typically occurring within the upper 10 to 20 miles of the Earth's surface.

The seismic hazards associated with earthquakes are multifaceted and include the following elements:

1. **Ground Motion:** This encompasses the vibration and shaking of the ground during an earthquake, constituting the most far-reaching effect that inflicts significant damage to buildings, structures, and infrastructure.
2. **Ground Surface Fault Rupture:** The ground shaking results from the rupture of a fault beneath the surface. This rupture can lead to the surface of the ground opening up, with potential openings of up to 20 feet, intensifying the impact of the seismic event.
3. **Liquefaction:** This phenomenon entails the temporary loss of ground strength, causing the ground to behave as a viscous fluid akin to quicksand, rather than a solid structure.
4. **Landslides:** Earthquakes can trigger landslides, involving rock falls and the sliding of rock fragments on steep slopes, thereby adding to the overall geological risks.
5. **Secondary Hazards:** Consequences of earthquakes may extend beyond the seismic event itself and encompass secondary hazards such as fire outbreaks, hazardous material releases, or structural failures. Recognizing and addressing these potential secondary hazards is integral to a comprehensive emergency management response.

Situation and Assumptions

Situation

Considering the unique seismic situation in Laramie County, where earth tremors are infrequent but not entirely unheard of, it is essential to acknowledge the broader context of seismic activity in the region. While the western part of Wyoming experiences several tremors annually, Laramie County itself has encountered sporadic instances of small earthquakes or tremors over the past century, with no reported damage.

Despite the relatively low frequency of seismic events, it is crucial for Emergency Responders to recognize that Laramie County is not exempt from the potential impact of earthquakes. The United States Geological Survey highlights the active ground movement area associated with the Yellowstone Caldera, introducing an additional layer of consideration for emergency preparedness.

Although earthquake risk is not classified as high, the potential consequences of a moderate to extreme quake could pose a significant threat to the area's infrastructure. Therefore, measures must be in place to address the specific challenges posed by earthquakes, ensuring a proactive and effective response to minimize potential devastation and safeguard the community and its infrastructure.

Assumptions

1. Seismic activities follow certain patterns based on historical records.
2. Earthquakes will come with **no** warning.
3. Certain types of buildings and infrastructure may be more vulnerable to earthquake damage.
4. High population density can lead to increased casualties and challenges in evacuation.
5. Earthquakes may disrupt communication infrastructure.
6. Earthquakes may trigger secondary hazards such as landslides, tsunamis (in coastal areas), or aftershocks.
7. Effective coordination among various agencies and organizations is crucial.
8. Earthquake recovery can be a prolonged and complex process.

Concept of Operations

In the aftermath of an earthquake event and dependent upon the extent of Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) activation, Emergency Support Function (ESF) coordinators and Chief Executive Officers (CEOs) of the affected jurisdictions are to report to the EOC for the purpose of organizing the preliminary damage assessment priorities. The deployment of Rapid Assessment Teams is imperative to kickstart comprehensive evaluations, as referenced in Support Annex 4.

Should circumstances necessitate, the CEO is empowered to issue a formal 'Declaration of Emergency.' Subsequently, Emergency Management is tasked with initiating contact with the Wyoming Office of Homeland Security (WOHS) to begin local/state coordination.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP) Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 2 or 3 EOC Activation

For an activation Level of 2 or 3 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to a Inclement Weather incident, the following ESFs are expected to be activated:

- **ESF #01 (Transportation):** ensures the coordination of transportation and transportation route restoration during and after local emergencies and disasters. In addition, it ensures transportation support for agencies requiring access and egress to significant events.
- **ESF #02 (Communications):** Assesses disruption to communications systems due to power failure or other infrastructure damage. Ensures the coordination and use of the local communications systems for the dissemination of emergency traffic and disaster information.
- **ESF #05 (Information & Planning):** Provides the core management and administrative functions in support of Emergency Management activities, Emergency Operations Center, Joint Information Center, and other agencies and departments.
- **ESF #06 (Mass Care Services):** Supports local and NGO efforts to address non-medical mass care, provides emergency assistance, temporary housing, and human services needs of individuals and/or families impacted by incidents of local significance.
- **ESF #07 (Resource Support):** Provide logistical and resource support to response agencies which is critical in their efforts to respond and recover from natural or man-made disasters.
- **ESF #08 (Public Health and Medical Services):** Ensures provision of comprehensive medical care to disaster victims and victims of mass health related events including veterinary and/or animal health issues.
- **ESF #09 (Search and Rescue):** Coordinates the deployment of certified Search and Rescue groups to provide specialized life-saving assistance during emergency events within their jurisdictions.
- **ESF #13 (Public Safety and Security):** Integrates local public safety and security capabilities and resources to support the full range of law enforcement incident management and response activities in times of disaster.
- **ESF #15 (External Affairs):** Provides accurate, coordinated, timely, and accessible information to affected audiences, including governments, media, the private sector, and all of the local populace.

Primary ESF:

There is no established primary ESF for an inclement weather incident. The CLC-EOC may choose to identify a primary ESF based on the individual incident. The primary ESF may transition during response as conditions change.

Relevant ESF's:

ESF #01 should consider the following for earthquake incident response:

- Assess all roadways, bridges, and other vital transportation infrastructure for damage and operational capability.
- Report initial damages to the CLC-EOC and consider priorities and resource needs for repair and restoration.
- Coordinate with the CLC-EOC to identify specific routes that are safe/open for emergency response personnel.
- Assess the transportation impacts from the earthquake and the need for additional road closures, alternate routes, or other protective actions.
- Monitor conditions that may restrict people from obtaining critical services or supplies, especially vulnerable populations who rely on public transportation or other forms of assistance.
- Provide information on road closures and alternate routes for distribution to the public in coordination with ESF #15 (External Affairs) through the Joint Information System (JIS)

ESF #02 should consider the following for Earthquake Incident response:

- Promptly report any communications outages to the CLC-EOC
- Establish communications between receiving healthcare agencies, first responders, and the CLC-EOC if traditional communications are compromised.
- Provide information on communications disruptions and restoration estimates for distribution to the public in coordination with ESF #15 (External Affairs) through the JIS

ESF #05 should consider the following for earthquake incident response:

- Ensure adequate alert and warning of the public.
- Work with Incident Command to communicate protective actions to the public to protect and mitigate impacts to people and property at risk.
- Collect critical, life safety information from activated ESFs for situational awareness, including:
 - Life safety issues (number of injuries, number of fatalities, number of structure fires, number of building collapses)
 - Status of critical infrastructure
 - Sheltering and mass care needs
 - Any reports of civil unrest
 - Access status for roadways and vital transportation corridors

ESF #06 should consider the following for earthquake incident response:

- Identify temporary sheltering and feeding locations that are safe for use and have not sustained any damage.
- Establish the expected number of people requiring shelter, food, and water based on preliminary damage assessment and any protective action orders issued (i.e., number of people evacuating)
- Identify a site for distribution of mass care assistance and receiving unsolicited volunteers and donated goods.

ESF #07 should consider the following for earthquake incident response:

- Identify and acquire resources for sheltering and mass care operations.
- Identify locations for commodity distribution.

ESF #08 should consider the following for earthquake incident response:

- Determine whether the incident should be considered a Mass Casualty Incident and notify the CLC-EOC.
- Collect information on any damage sustained at the hospital and other critical healthcare facilities. Share any expected impacts to service levels with the CLC-EOC.
- Develop public health and medical information for the public and distribute in coordination with ESF #15 (External Affairs) through the JIS

ESF #09 should consider the following for earthquake incident response:

- Assess the need for collapsed structure rescue and request necessary resources from ESF #07 (Resource Support)
- Initiate collapsed structure rescue of trapped victims to level of training and equipment.
- Identify and locate the deceased, leaving them in place when possible until released by the County Coroner
- Support the documentation of bodies, body parts, personal effects, and other evidence.

ESF #13 Public Safety should consider the following for earthquake incident response:

- Provide access control and security to impacted areas.
- Support implementation and enforcement of protective action measures as needed.

ESF #15 should consider the following for earthquake incident response:

- Provide emergency information to the public focused on life safety. Topics may include:
- Checking on neighbors
- Shelter locations (if established)
- Extent of damage
- Safety information (gas leaks, driving, road closures, etc.)
- Status of government services and restoration estimates
- Status of healthcare services and facilities o Impacts to critical infrastructure and restoration estimates
- Deploy redundant, low-tech communications platforms (such as radio or bulletin boards) in case of power outages and to improve situational awareness.
- Monitor social media and other media outlets to inform ongoing damage assessments.
- Ensure messages reach all communities, including those with disabilities and limited English proficiency.

Annex B – Inclement Weather

Purpose

The objective of this annex is to enhance the Cheyenne/Laramie County Emergency Operations Plan by describing policies and procedures tailored to response and recovery efforts during Inclement Weather emergencies. This annex has been created to foster a whole community response approach from local agencies, aiming to minimize the risk of inclement weather consequences and expedite the restoration of essential services in the aftermath of significant inclement weather events.

Given the diverse climate in Laramie County, inclement weather remains a constant threat throughout the year, dictated by the seasons. This annex serves as a crucial tool in Laramie County's preparedness, allowing coordination through the unique challenges posed by inclement weather and fortify our community's resilience against its impacts.

When discussing emergency preparedness, it is imperative to acknowledge that winter weather constitutes a distinct category within the spectrum of Inclement Weather Emergencies. Annex H has been carefully written to align with the established and adopted Laramie County/City of Cheyenne snow plan. It is important to note that this annex operates in tandem with, rather than supersedes, the Snow Plan Annex, Annex H. This strategic alignment ensures a comprehensive and cohesive approach to emergency response, particularly in the face of winter-related challenges.

Situation and Assumptions

Situation

Laramie County confronts recurrent severe weather incidents annually, encompassing a spectrum of inclement weather emergencies such as, but not limited to: Tornadoes, Floods, Thunderstorms, Heatwaves, and Extreme Cold. This annex is crafted with a particular focus on employing planning, response, mitigation, and, in extreme scenarios, evacuation/sheltering measures to enhance the safety of Laramie County residents. The potential for damage is multifaceted, encompassing flooding and erosion, ice accumulation, disruption of public services and communications, and the peril of damage or destruction to public and private property, with the gravest consequence being the loss of life. Urban areas, in particular, face heightened vulnerability to the repercussions of heavy rain and flash flooding.

1. **Tornadoes:** A tornado, characterized by a violently rotating column of air extending from a thunderstorm to the ground, poses a severe threat, causing potentially devastating damage in its path.
2. **Floods:** Floods arise when water surpasses normal levels, submerging land and property. This can result from heavy rainfall, rapid snowmelt, storm surges, or the failure of dams or levees.
3. **Thunderstorms:** Thunderstorms, marked by atmospheric disturbances featuring lightning, thunder, heavy rain, and occasionally hail or tornadoes, develop when warm, moist air rises and interacts with cooler air.
4. **Heatwaves:** Prolonged periods of excessively high temperatures, often accompanied by high humidity, define heatwaves. These events present serious health risks, leading to heat-related illnesses and imposing stress on ecosystems.

Cheyenne/Laramie County Emergency Operations Plan

5. **Extreme Cold:** Extreme cold refers to temperatures significantly below the regional average, resulting in freezing conditions. Exposure to extreme cold can lead to frostbite, hypothermia, and other cold-related health issues. This annex underscores the imperative of comprehensive measures to address the diverse challenges posed by each of these inclement weather phenomena, aiming to safeguard the well-being and resilience of the community in Laramie County

Assumptions

1. There is a need for extensive coordination among various local agencies to ensure a unified and effective response to inclement weather emergencies.
2. Laramie County experiences inclement weather throughout the entire year, with different seasons bringing varying weather challenges.
3. Emergency management efforts are geared towards protecting lives and minimizing harm to the community. In extreme flooding conditions, Laramie County may require state and federal assistance.
4. Specific considerations and challenges associated with densely populated areas that need to be addressed in emergency planning.
5. Urban areas in Laramie County are particularly vulnerable to the impacts of heavy rain and flash flooding.
6. Emergency management plans should be flexible and adaptable to the changing weather patterns. A significant number of flooding casualties may occur due to the effects of severe weather.
7. There is an awareness of the potential health risks associated with specific weather events, such as heatwaves leading to heat-related illnesses and extreme cold posing risks of frostbite and hypothermia.
8. There is a commitment to protecting both public infrastructure and individual assets during emergency situations.

Concept of Operations

The Cheyenne/Laramie County Emergency Operations Plan emphasizes a local-first approach to the initial response to all incidents. When the scale of an incident surpasses local capabilities, the established declaration process enables the solicitation of additional aid from state agencies or, if needed, the federal government at the request of the Governor. **See SECTION "X" FOR THE DECLARATION PROCCCESS.**

Given Laramie County's diverse climate and the persistent threat of inclement weather throughout the year, this annex underscores the importance of flexibility in emergency plans. By addressing a spectrum of weather-related challenges, from tornadoes to floods and extreme cold, the community aims to fortify its resilience.

Watches and Warnings

- **Flash Flood Watch:** A Flash Flood Watch is issued by the National Weather Service (NWS) when conditions are favorable for the development of flash floods. The NWS specifies the area(s) and times for which the watch is in effect. This alert indicates that there is a potential for rapid and life-threatening flooding in the designated areas, and people should stay informed and be prepared to take action if necessary.
- **Flash Flood Warning:** A Flash Flood Warning is issued when flooding is actually occurring or is imminent. The warning may include various flood hazards such as thunderstorm effects, road damage, or high waters that make roads impassable. This alert is a signal for people in the affected areas to take immediate action to protect themselves and their property from the imminent danger of flash flooding.
- **Severe Thunderstorm Watch:** A Severe Thunderstorm Watch is issued when conditions are favorable for the development of severe thunderstorms. The NWS specifies the area(s) and times for which the watch is in effect. This alert indicates that severe thunderstorms, with associated hazards like lightning, high winds, hail, heavy rain, or tornadoes, could occur in the designated areas, and people should stay informed and be prepared for rapidly changing weather conditions.
- **Severe Thunderstorm Warning:** A Severe Thunderstorm Warning is issued when severe thunderstorms are actually occurring or are imminent. The warning includes information about specific severe weather hazards, such as lightning, high winds, hail, heavy rain, or downpours leading to flash flooding and tornadoes. This alert prompts people in the affected areas to take immediate safety precautions.
- **Tornado Watch:** A Tornado Watch defines an area where tornadoes and other severe weather are possible in the next several hours. It does not indicate that tornadoes are imminent but serves as a warning for people to stay alert and prepared for the potential occurrence of tornadoes. During a tornado watch, individuals are advised to turn on local TV or radio, activate weather radios, ensure access to safe shelter, and inform friends and family about the potential tornado threat.
- **Tornado Warning:** A Tornado Warning is issued when a tornado has been spotted or when Doppler radar indicates a thunderstorm circulation that could spawn a tornado. When a Tornado Warning is issued for a specific town or county, immediate safety precautions are necessary. Local NWS offices issue tornado warnings, and residents in the warned area should seek safe shelter immediately.
- **Wind Chill Advisory:** A Wind Chill Advisory is issued when the combination of cold temperatures and wind speeds could result in conditions that may be harmful to exposed skin.
- **Wind Chill Watch:** A Wind Chill Watch is issued when there is the potential for extremely cold wind chill values in the upcoming hours or days.
- **Wind Chill Warning:** A Wind Chill Warning is issued when wind chill conditions are expected to be hazardous and may pose a significant threat to life and property.
- **Heat Advisory:** A Heat Advisory is issued when high temperatures and high humidity levels combine to create conditions that may lead to heat-related illnesses. While not as severe as an Excessive Heat Warning, a Heat Advisory indicates that individuals should exercise caution and take steps to prevent heat-related health issues.
- **Excessive Heat Warning:** An Excessive Heat Warning is issued when extremely high temperatures and high humidity levels are expected to create hazardous conditions that may pose a significant risk to health and safety.

Dam Failure/Causes

Dam failures can result from various causes, including overtopping, foundation defects, piping and seepage failures, and conduit and valve issues. Overtopping may occur due to poor spillway design, settling of the dam crest, or spillway blockage, leading to high water levels during heavy rainfall. Foundation defects result from settling in the dam foundation, slope instability, uplift pressures, and seepage, causing structural instability. Piping and seepage failures involve internal erosion from seepage, erosion along hydraulic structures, animal burrows, and dam structure cracks. Conduit and valve failures stem from problems with dam valves and conduits.

Other dam failures may arise from miscellaneous causes, such as earthquakes, landslides, extreme storms, heavy snow-melt, equipment malfunction, structural damage, or sabotage. Dam incidents are categorized into Type 1 (slowly developing), Type 2 (rapidly developing), and Type 3 (instantaneous failure). A Type 3 failure requires immediate notification and evacuation due to the imminent threat, with a short time before water starts to rise.

In the specific context of Crystal or Granite Reservoirs, a dam breach could result in water reaching Cheyenne within 3-5 hours, necessitating urgent emergency response and evacuation procedures.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP) Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 2 or 3 EOC Activation

For an activation Level of 2 or 3 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to an Inclement Weather incident, the following ESFs are expected to be activated

- **ESF #01 (Transportation):** ensures the coordination of transportation and transportation route restoration during and after local emergencies and disasters. In addition, it ensures transportation support for agencies requiring access and egress to significant events.
- **ESF #02 (Communications):** Assesses disruption to communications systems due to power failure or other infrastructure damage. Ensures the coordination and use of the local communications systems for the dissemination of emergency traffic and disaster information.
- **ESF #03 (Public Works):** Defines the role of local public works and engineering departments in providing resources related to lifesaving or life protection prior to, during and following a disaster.
- **ESF #4 (Firefighting):** Coordinates response to fires, rescue, medical assistance, extrication, mass casualty incidents as well as warning and evacuation prior to a disaster. ESF #4 coordinates the fire response to any disaster.

Cheyenne/Laramie County Emergency Operations Plan

- **ESF #05 (Information & Planning):** Provides the core management and administrative functions in support of Emergency Management activities, Emergency Operations Center, Joint Information Center, and other agencies and departments.
- **ESF #06 (Mass Care Services):** Supports local and NGO efforts to address non-medical mass care, provides emergency assistance, temporary housing, and human services needs of individuals and/or families impacted by incidents of local significance.
- **ESF #07 (Resource Support):** Provide logistical and resource support to response agencies which is critical in their efforts to respond and recover from natural or man-made disasters.
- **ESF #08 (Public Health and Medical Services):** Ensures provision of comprehensive medical care to disaster victims and victims of mass health related events including veterinary and/or animal health issues.
- **ESF #09 (Search and Rescue):** Coordinates the deployment of certified Search and Rescue groups to provide specialized life-saving assistance during emergency events within their jurisdictions.
- **ESF #11 (Agricultural, Natural, and Cultural Resources):** Organizes and coordinates support for the protection of the agricultural, natural and cultural resources during man-made or natural disasters.
- **ESF #13 (Public Safety and Security):** Integrates local public safety and security capabilities and resources to support the full range of law enforcement incident management and response activities in times of disaster.
- **ESF #15 (External Affairs):** Provides accurate, coordinated, timely, and accessible information to affected audiences, including governments, media, the private sector, and all of the local populace.

Primary ESF:

There is no established primary ESF for an inclement weather incident. The CLC-EOC may choose to identify a primary ESF based on the individual incident. The primary ESF may transition during response as conditions change.

ESF #01 should consider the following during an inclement weather response:

- Assess transportation impacts.
- Report damages to CLC-EOC and prioritize resource needs.
- Coordinate with CLC-EOC to identify safe/open routes for emergency response.
- Monitor conditions affecting critical services, especially for vulnerable populations.
- Provide information on road closures and alternate routes via ESF #15.
- Assess transportation impacts from inclement weather.
- Coordinate and support prevention, protection, response, recovery, and mitigation among transportation infrastructure stakeholders at the local level.
- Provide first responder/family transportation.

ESF #02 should consider the following during an inclement weather response:

- Report communications outages promptly to CLC-EOC.
- Provide information on disruptions and restoration estimates for public distribution.
- Establish alternative communications with healthcare agencies and first responders.
- Dispatch and direct emergency services in times of emergencies and disaster.
- Being the main warning point for Laramie County providing warning and activation of the Outdoor Warning System should the system need to be manually activated.

ESF #03 should consider the following during an inclement weather response:

- Conducting pre and post incident assessments of public works and infrastructure.
- Provide technical assistance to include engineering expertise, construction management and contracting and real estate services.
- Provide emergency repair of damaged infrastructure and critical facilities in coordination with elected officials and department heads.

ESF #04 should consider the following during an inclement weather response:

- Provide assistance with emergency medical services.
- Help coordinate and facilitate rescue/extrication services.
- Respond to mass casualty events.
- Help coordinate and facilitate warning and evacuation.

ESF #05 should consider the following during an inclement weather response:

- Gather incident information and identify required resources.
- Ensure adequate public alerts and warnings.
- Host planning meetings for preparedness and impact assessment.
- Work with Incident Command to communicate protective actions.
- Collect critical information for situational awareness.
- Assist with emergency communications.
- Coordinate and facilitate damage assessments.
- Ensure Individual Family Assistance is active.
- Continuity of Government

ESF #06 should consider the following during an inclement weather response:

- Identify temporary sheltering and feeding locations.
- Establish expected numbers for shelter, food, and water needs.
- Identify sites for mass care assistance.

ESF #07 should consider the following during an inclement weather response:

- Order additional resources from the SRCC if needed.
- Request resource inventory from mutual aid agencies.
- Identify and acquire resources for sheltering and mass care.
- Identify locations for commodity distribution.
- Maintain a database of emergency services equipment, including Fire, EMS, Law Enforcement, Public Works, and Health Department resources available for mutual aid response in and/or near Laramie County.
- Route requests for supplies through local governments and local NGO's to assist emergency services.
- Coordinate with finance to confirm procurement and payment for supplies used in disaster response and recovery.
- Coordinate with local elected officials and legal services to contract, review and approve disaster response and recovery logistical support.

ESF #08 should consider the following during an inclement weather response:

- Monitor utility disruptions affecting healthcare providers.
- Identify potential impacts to vulnerable populations.
- Support public messaging on health and safety impacts.
- Determine Mass Casualty Incident status.
- Collect information on damage to healthcare facilities.
- Develop public health information for distribution. Coordination of emergency hospital services
- Facilitating the coordinated use of medical personnel and communications to provide for the care of the sick, injured, and dead resulting from a disaster.
- Coordination of crisis response and mental health services for persons who suffer from reactions to the disaster.
- Coordination of Critical Incident Stress Management services for emergency service workers.
- Providing resources for the systems and methods required to prevent or control disease.

ESF #09 should consider the following during an inclement weather response:

- Identify and locate isolated individuals needing evacuation.
- Perform water rescue as needed.
- Support evacuation measures.
- Assess the need for collapsed structure rescue.
- Initiate collapsed structure rescue and support evacuation measures.
- Identify and locate the deceased.
- Provide command and control coordination for search and rescue efforts in accordance with the **Laramie County Search and Rescue Plan**.
- Coordinates technical expertise through local SAR groups.
- Provide technical equipment as available through local SAR groups.
- Provide mapping coordination for SAR groups.
- Assist with infrastructure damage assessment.

ESF #11 should consider the following during an inclement weather response:

- Assess impacts to natural resources, wildlife, and water sources.
- Provide response actions for resource conservation and restoration.
- Monitor water quality levels.
- Providing nutrition assistance needs, obtaining appropriate food supplies, arranging for delivery of the supplies and authorizing disaster food assistance programs.
- Response to animal and agricultural health issues which includes implementing an integrated local and State response to an outbreak of contagious or economically devastating animal/zoonotic disease, an outbreak of a highly infective exotic plant disease, or an economically devastating plant pest infestation.
- Coordinate with ESF #8 (Public Health and Medical Services) and provide technical expertise in support of animal and agricultural emergency management
- Ensure the safety and defense of the commercial food supply through coordination with other responding agencies.
- Protect Natural, Cultural Resources, and Historical Properties resources

ESF #13 should consider the following during an inclement weather response:

- Provide access control and security.
- Support implementation and enforcement of protective actions.

ESF #15 should consider the following during an inclement weather response:

- Provide emergency information to the public.
- Communicate protective actions and coordinate with ESF #05.
- Deploy redundant communications platforms.
- Monitor media for ongoing damage assessments.
- Provide emergency information to the public.
- Deploy redundant communications platforms.
- Monitor media for ongoing damage assessments.

Annex C - Hazardous Materials

Coordinating Agencies:

- Regional Emergency Response Team 7
- Cheyenne Fire Rescue
- Cheyenne/Laramie County Emergency Management Agency
- Laramie County Combined Communications Center
- Cheyenne-Laramie County Public Health
- County, City and Town Elected Officials

Cooperating Agencies:

- 84th Civil Support Team
- WYDOT
- Wyoming Highway Patrol
- Cheyenne Police Department
- Laramie County Sheriff's Office
- Cheyenne Fire Rescue
- Laramie County Fire Districts 1-10
- FEWAFB Fire Department
- Wyoming Air Guard Fire Department
- Frontier Refinery Fire Brigade
- Cheyenne Public Works
- Board of Public Utilities
- Laramie County Public Works Department
- Wyoming Office of Homeland Security
- Wyoming Department of Environmental Quality
- Railroad Emergency Response Teams
- Laramie County School Districts 1 & 2
- Cheyenne Transit Program

Purpose

The purpose of this annex within the Cheyenne/Laramie County Emergency Operations Plan is to provide an overview of the roles, responsibilities, and coordinating mechanisms to manage hazardous materials incidents within Laramie County, Wyoming. Laramie County encompasses the City of Cheyenne and the towns of Albin, Burns, and Pine Bluffs, all of which face potential risks due to the diverse hazardous materials utilized, manufactured, stored, and transported within its boundaries.

Given the location of Cheyenne at the intersection of major transportation routes such as Interstate 25, Interstate 80, the Union Pacific Railroad, and the Burlington Northern Railroad, the possibility of hazardous materials incidents involving these routes and affecting local communities is a real concern. Additionally, pipeline systems crisscross the county, and significant hazardous materials manufacturing facilities, including the Holly Frontier Refinery and Dyno Nobel, further elevate the risk profile.

The implications of an accidental hazardous materials release—whether to the air, land, or surface/subsurface waters—are significant, posing immediate and long-term threats to both the population and the environment. In response, it is imperative that all efforts to control and mitigate the consequences of such incidents align with the numerous federal acts, codes, standards, and rules governing hazardous materials. The National Response Framework (NRF) and the National Incident Management System (NIMS) serve as overarching frameworks guiding our response strategies.

Each agency involved retains the responsibility for developing and implementing documents that establish policies, standard operating procedures, or operating guidelines. These documents must align with the roles and responsibilities outlined within the Cheyenne/Laramie County Emergency Response Plan and its respective annexes.

Objectives

1. **Minimize Hazards:** Develop and implement a plan of action designed to minimize hazards to life, property, and the environment resulting from the release of hazardous materials.
2. **Coordinated Response:** Establish robust procedures for the notification, alerting, warnings, and reporting of incidents. This ensures a coordinated and efficient effort in response to hazardous materials releases.
3. **Resource Identification:** Identify and catalog emergency response organizations, equipment, and additional resources that can be mobilized to respond effectively to hazardous materials incidents.
4. **Integration:** Provide a mechanism for the seamless integration of community and facility response procedures into the broader county emergency management plan. This facilitates a unified and well-coordinated response.
5. **Responsibility Delineation:** Clearly delineate the responsibilities of local government, facility owners/operators, and their respective relationships in the context of response and recovery operations. This includes planning and exercise operations, ensuring clarity and efficiency in our emergency management efforts.

Responsibilities and Governing Principles

1. **Leadership and Coordination:** The primary responsibility is to establish effective leadership, coordination, and unified on-scene command of emergency response forces in the event of a hazardous materials emergency. This ensures a cohesive and strategic approach to managing the incident.
2. **Diverse Response Organizations:** Recognizing the diverse nature of hazardous materials emergencies, the plan acknowledges the potential involvement of various on-scene response organizations. This includes emergency services personnel from all levels of government, industry representatives, private contractors, and the media. The complexity of such emergencies may necessitate specialized equipment and technical knowledge, and critical decisions must be made in areas such as release containment, emergency worker safety, public protective actions, and environmental protection.
3. **Unified and Integrated Response:** While response organizations are typically trained to operate within their agency command structure, the plan emphasizes the rare but crucial need for a unified and integrated multi-organizational response, especially in major

incidents. The implementation of a strong command and control structure is deemed essential for effective collaboration.

4. Hierarchy of Direction and Control: The direction and control of the response begin at the local level but may expand to involve city, county, state, and federal agencies. This hierarchical approach ensures a scalable and coordinated response that can adapt to the evolving nature and severity of the hazardous materials incident.

Assumptions

1. Rapid identification of unknown hazardous materials is crucial.
2. Hazardous material releases immediately threaten human health or the environment, necessitating prompt responses.
3. Evacuation may be necessary based on release severity, protecting the public and emergency responders.
4. Specialized equipment and expertise are essential for handling hazardous materials, especially chemical, biological, radiological, or nuclear substances.
5. Releases can result in injuries or casualties, requiring medical response capabilities.
6. Immediate and long-term environmental effects demand monitoring and remediation efforts.
7. Coordinated responses from multiple agencies at local, regional, and national levels are required.
8. Effective communication within and outside responding agencies is essential.
9. Adherence to federal, state, and local regulations influences response strategies.
10. Hazardous material releases can cause significant social, economic impacts, disrupting normal activities.
11. Identifying the source and cause of releases may be challenging initially.

Response

In formulating an effective emergency response, obtaining key initial information is essential for proper notification and prioritization of incidents. The following considerations guide this process:

1. Immediate Threat Assessment:
 - Assess immediate threats to civilians and responders.
 - Evaluate actions that can be taken without further endangering lives.
2. Risk of Delayed Action:
 - Assess potential loss of lives due to delayed action.
3. Incident Progression:
 - Monitor incident spread or intensity increase.
4. Protection of Resources:
 - Identify high-value resources at risk.
 - Evaluate possibility of saving or salvaging resources.
5. Health, Economic, and Environmental Impact:
 - Consider short and long-term impacts on health, economy, and environment.

6. Resource Availability:

- Determine availability and reasonable cost of required resources.

Life safety remains the **top priority**, adopting a defensive response strategy and considering factors like positioning, isolation, and facing away from the incident.

First-In Responder - Establish Command: The initial actions of the "first-in" responder, including scene size-up, reporting to dispatch, and implementing initial isolation measures, significantly influence the incident's outcome. Reference the Emergency Response Guidebook, a crucial tool aiding first responders in rapidly identifying hazards and ensuring public and self-protection during the initial response phase.

Initial Response to Hazardous Materials Incidents:

- **Responder Agencies:**
 - Involves law enforcement, fire, and EMS as the minimum initial responders.
 - Responsibility for implementing the Incident Command System lies with the first responding agencies.
- **Response Levels:**
 - Small incidents may be handled by responders trained at Awareness and Operations levels.
 - Larger incidents necessitate the immediate involvement of Hazardous Materials Technicians, subject matter experts, additional agencies, and personnel.
- **Unified Command and Isolation Measures:**
 - Establish Unified Command for effective coordination.
 - Expand isolation zones and distances as needed.
- **Coordination Responsibilities:**
 - Law enforcement and public works agencies collaborate on cordons, road blocks, and overall incident management.

A comprehensive response strategy, involving prompt assessment, prioritization, and coordination, ensures an effective and safe resolution to hazardous materials incidents.

Additional Agency Notifications

In the event of hazardous materials incidents, a systematic approach to additional agency notification and incident command is crucial for effective emergency response. The following outlines the key components of this process:

Additional Agency Notification:

- **Local Jurisdictional Involvement:**
 - Local Hazardous Materials Team activation.
 - Notification to Cheyenne/Laramie County Emergency Management Agency, involving elected officials and collaboration with the Wyoming Office of Homeland Security.
- **Regional and State Involvement:**
 - Coordination with the Regional Emergency Response Team-Region 7 (RERT-7).
 - Engagement of the 84th Civil Support Team.
 - Involvement of regulatory bodies such as the Wyoming Department of Environmental Quality and the Wyoming Department of Health.

Cheyenne/Laramie County Emergency Operations Plan

- **Local Healthcare Partners:**
 - Collaboration with Cheyenne-Laramie County Health Department, Cheyenne Regional Medical Center, and Cheyenne VA Medical Center.
 - Ensuring the safety of the water supply and prevention of sewer contamination through coordination with the Board of Public Utilities (BOPU).
- **Mutual Aid Requests:**
 - Provision for additional Hazardous Materials Technicians through Mutual Aid requests with F.E. Warren A.F.B. Fire Department, Wyoming Air Guard Fire Department, Holly Frontier Refinery, and Railroad Emergency Response Teams.
- **Operational Considerations:**
 - Anticipation of the need for multiple relief rotations in and out of the "Hot Zone."

Incident Command Post Options:

- **Strategic Placement:**
 - Options include on-scene Incident Command Vehicle, HAZMAT 7-CF&R Command Center, EMA "Interagency Command Vehicle," and Cheyenne Police Department Enforcement Command Vehicle.

Public Warning Systems:

- **Public Communication Strategies:**
 - Utilization of Cheyenne/Laramie County Emergency Management Agency or the Laramie County Combined Communications Center for public warnings.
 - Activation of Outdoor Warning Sirens, NOAA Weather Radio, Emergency Alert System (radio and television broadcasts), IPAWS, and law enforcement patrol officers for neighborhood public address broadcasts and door-to-door contacts.

Evacuation and Shelter-in-Place Protocols:

- **Coordination and Management:**
 - Evacuation coordination through law enforcement, public works, mass transit providers, and the American Red Cross.
 - Residents may be advised to evacuate or shelter in place.

Notification of Major Events:

- **State and Federal Communication:**
 - Reporting of events of major significance to the Wyoming Office of Homeland Security for subsequent notification to applicable federal agencies.

Containment Strategies:

Containing a hazardous material release is of utmost importance to prevent further contamination, injury, and damage while stabilizing the scene. Employing confinement methods such as damming, diking, absorption, patching, plugging, closing valves, and covering is critical. The establishment of control zones (hot, warm, cold) and corridors minimizes exposure risks.

General Guidelines: Guidance for hazardous materials containment procedures underlines the following priorities:

- **Defensive Posture:** Control the material defensively.
- **Confined Area:** Constrain the material to as small an area as possible.
- **Prevent Container Failure:** Take measures to prevent container failure.
- **Containment Techniques:** Utilize various methods like closing valves, plugging holes, repositioning containers, etc.
- **Facility Operations:** Exercise caution when operating or closing valves at fixed facilities, ensuring actions align with the facility owner/operator's directives.

Decontamination Protocols: The level of decontamination is tailored to the agent and exposure level, considering:

- **Likelihood of Exposure:** Emergency decontamination for situations where exposure is likely but not confirmed.
- **Known Contamination:** Graduated responses based on known contamination and skin contact/irritation.

Clean Up and Recovery:

Clean-up and recovery is the final stage of hazardous materials incident response. Since a shipper, spiller, or owner is responsible for recovery and clean-up, HAZMAT team and other response personnel will not participate in this stage of an incident, unless incidental cleanup mitigates the problem. This decision will be made by the HAZMAT supervisor.

It is imperative that responsible parties in hazardous materials incidents are identified. The responsible party is liable for clean-up operations. Responsible parties should be informed that they are financially responsible for the clean-up and disposal of the hazardous materials. There are a wide range of rules and regulations pertaining to clean-up and disposal, and Hazardous Materials Technicians, and others, should be well versed in notification requirements.

Clean-up operations will be conducted under the supervision of the appropriate authority having jurisdiction. This jurisdiction may include city, county, state and/or federal agencies including, but not limited to: health or environmental agency representatives.

Reports and Documentation:

Post-incident critique, investigation reports, and after-action reports are mandatory for all hazardous materials incidents. These reports may be submitted to the Wyoming Office of Homeland Security, the State Emergency Response Commission (SERC), and the Local Emergency Planning Committee (LEPC). Tracking incident expenses is vital for reimbursement purposes, emphasizing the collaborative effort in controlling, containing, and mitigating the incident.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP)

Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 3 or 2 EOC Activation

For an activation Level of 3 or 2 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to a HazMat incident, the following ESFs are expected to be activated:

- **ESF #01 (Transportation):** Initiates temporary road closures and alternate routes as needed
- **ESF #03 (Public Works):** Assesses potential impacts to the public drinking water supply or other public infrastructure
- **ESF #04 (Firefighting):** Provides personnel, equipment, and resources for response, as needed
- **ESF #05 (Information & Planning):** Gathers information about the incident and identifies resources required to respond
- **ESF #07 (Resource Support):** Locates and provides supplies to emergency response personnel, as needed
- **ESF #08 (Public Health and Medical Services):** Coordinates protective actions for medical staff, first responders, and impacted populations; deploys medical resources to the incident, as needed
- **ESF #10 (Hazardous Materials):** Identify and mitigate hazardous material releases
- **ESF #11 (Agricultural, Natural, and Cultural Resources):** Assesses potential impacts to natural resources, wildlife, water sources, and the environment
- **ESF #13 (Public Safety and Security):** Enforces protective actions and provides safety and security around the incident site
- **ESF #15 (External Affairs):** Provides accurate updates and messaging to the public about protective actions, road closures, or other potential impacts

Primary ESF:

ESF #10 should consider the following for HazMat incident response:

- Ensure proper HazMat response protocols are being followed.
- Ensure that an IC and ICS has been adequately established at the incident, including development of a written Incident Action Plan (IAP).
- The local HazMat response agency with authority is responsible for detection, assessment, and monitoring of the spill site.
- Coordinate with ESF #08 (Public Health and Medical Services) to activate and deploy medical resources to the incident, as well as determine protective actions for staff, first responders, and impacted populations.
- Develop and issue protective actions for the public and distribute in coordination with ESF #15 (External Affairs) through the Joint Information System (JIS).
- Coordinate with ESF #11 (Agriculture, Natural, and Cultural Resources) to assess potential impacts to natural resources within or near the incident site, as well as implement mitigation actions for further contamination.
- Anticipate needs for additional response resources, including RERTs, CSTs, WY DEQ, and EPA Environmental Response Teams (ERT).

Relevant ESF's:

ESF #01 should consider the following for a HazMat incident response:

- Assess the transportation impacts from the spill, including location, duration, and the need for alternate routes.
- Provide information on road closures and alternate routes for distribution to the public in coordination with ESF #15 (External Affairs) for distribution through the JIS.
- Address the need for evacuation planning and the identification of evacuation routes

ESF #03 should consider the following for a HazMat incident response:

- Assess the public water infrastructure impacts from the spill, including location, duration, and the need for protective actions (such as boil water notices) in coordination with ESF #08 (Public Health and Medical).
- Provide information on public water system issues for distribution to the public in coordination with ESF #15 (External Affairs) for distribution through the JIS.

ESF #04 should consider the following for a HazMat incident response:

- Mobilize resources, including personnel and equipment, to support decontamination.
- Address potential fire danger at incident site.

ESF #05 should consider the following for a HazMat incident response:

- Develop and distribute reports on the status of operations and impacts, including Situation Reports as needed.
- Ensure the timely warning of Laramie County residents and visitors of potential or actual impacts, including relaying the IC's issued protective actions
- Assess the need for sheltering or mass care services based on protective action orders.
- Organize information shared through other ESFs to establish situational awareness of impacts across the community, including human health, environmental damages, or disruption of critical infrastructure.
- Develop a process for information sharing between local incident management agencies and other appropriate sectors that can offer support.
- Ensure proper hazardous materials notifications are made to the WOHS Duty Officer, SERC, WY DEQ, and NRC, as necessary.

ESF #07 should consider the following for a HazMat incident response:

- Assist with specialized hazmat resource requests such as RERTs, CSTs, and EPA ERTs.

ESF #08 should consider the following for a HazMat incident response:

- Organize any necessary care or protective actions among hospitals, medical personnel, emergency service providers, and technical specialists.
- Ensure proper lockdown and decontamination procedures are initiated immediately upon notification of an incident.
- Provide public health response activities such as EMS triage, treatment, and transportation or evacuation of impacted individuals.
- Monitor the health and safety of first responders and healthcare staff.
- Coordinate with impacted drinking water supply entities, ESF #03 (Public Works), and ESF #11 (Agriculture, Natural, and Cultural Resources) on the issuance of boil water orders, do not drink orders, or other protective actions around contaminated drinking water.

Cheyenne/Laramie County Emergency Operations Plan

- Provide information, personal protective actions, signs and symptoms, and other relevant human health information regarding the incident for distribution to the public in coordination with ESF #15 (External Affairs) for distribution through the JIS.

ESF #11 should consider the following for a HazMat incident response:

- Assess potential impacts to natural resources during initial incident response and advise on immediate protective measures.
- Provide appropriate response actions to conserve, rehabilitate, recover, and restore natural, cultural, and historic resources impacted by the incident.
- Assess rural drinking water impacts from the spill in coordination with ESF #08 (Public Health and Medical).
- Monitor air quality levels in the area surrounding the incident site and initiate response to heightened levels of pollutants.

ESF #13 should consider the following for a HazMat incident response:

- Provide access control and security to impacted areas.
- Inform, initiate, and enforce protective actions, including evacuations as needed.

ESF #15 should consider the following for a HazMat incident response:

- Organize and coordinate unified messaging for the public about the incident, including:
 - Critical infrastructure disruptions
 - Road closures and alternative routes
 - Protective actions
 - Signs and symptoms of contamination
 - Ongoing incident operations
- Confirm jurisdictional communication strategies to prevent any misinformation sharing.

Annex D - Emergency Evacuation

Situation

Description / Definition

In various emergency scenarios, such as floods, hazardous material spills, radiological threats, volcanic activity, major fires, dam breaches, or similar incidents, Laramie County emergency responders and EOC personnel may decide to evacuate all or part of the community to minimize potential loss of life.

Regardless of the specific threat, the evacuation approach remains consistent. The initial step involves identifying the at-risk area and weighing the risks of evacuation against those of sheltering in place. Managers then designate routes to low-risk areas, arrange transportation for those without private means, open and staff buildings for housing and feeding evacuees, and provide clear instructions to the public.

Historically, during emergencies with advance warning, over 50% of residents in threatened areas evacuate before official orders. Studies suggest that 80% of evacuees prefer seeking shelter with friends or relatives over designated public facilities. If this trend continues, Laramie County may need to accommodate up to 17,000 people in case of a total evacuation.

For this plan, evacuation involves removing individuals from the threat's path before impact, falling under the jurisdiction of law enforcement and public safety as outlined in this plan. Rescue, on the other hand, involves moving victims from an impacted area and follows departmental standard operating procedures.

The authority to order an evacuation lies with local government or the governor, with the elected chief executive officers in Laramie County holding the formal authority. In on-scene operations, the Incident Commander (IC) assumes this authority. According to Wyoming statute, no one can force citizens to evacuate against their will unless they obstruct emergency operations. However, officials can enforce evacuation of public facilities or businesses, and law enforcement can take action against those violating established perimeters or interfering with responders.

Evacuation Considerations

1. Identification of Need:
 - a. Not all emergencies necessitate public protective action or evacuation. The Incident Commander (IC) must assess the risk of leaving the population unprotected against the risks associated with sheltering in place or evacuation.
2. Identification of the Area Affected (Reference: Cheyenne/Laramie County Emergency Response Plan):
 - a. Before implementing an evacuation, the following steps must be taken:
 - i. Identify high hazard areas, including those potentially impacted if the incident escalates or conditions change.
 - ii. Identify potential evacuation routes, considering capacities and vulnerabilities to the hazard.
 1. Primary evacuation routes for Laramie County include I-80, I-25, US 85, US 30, WY 210 (Happy Jack Road), and WY 216 (Albin Hwy).

Cheyenne/Laramie County Emergency Operations Plan

2. Coordinate the use of routes if the evacuation involves multiple jurisdictions.
 - b. Alert and warn the public at risk, providing specific information about the risk, proactive actions required, and potential risks of non-compliance.
3. Determination of Time Needed for Evacuation:
 - a. Utilize the following formula to estimate the time needed to evacuate a threatened area:
 - i. $TD \text{ (Time from response to decision to evacuate)} + TA \text{ (Time needed to alert and instruct the public)} + TM \text{ (Time needed to mobilize the population)} + TT \text{ (Time needed to leave the hazard area)} = TN \text{ (Total time needed to evacuate)}$.
 - ii. Special Note: Under ideal circumstances, 2500 vehicles can pass a single point in one hour. Estimate four persons per vehicle.
 - iii. For example:
 1. If it takes the IC 15 minutes to decide to evacuate ($TD = 15$), 25 minutes to activate warning and notification ($TA = 25$), 30 minutes for the population to mobilize ($TM = 30$), and 15 minutes for each vehicle to clear the hazard area ($TT = 15$), then the total time needed to evacuate is 1 hour and 25 minutes (TN).

Special populations

The Access and Functional Needs (AFN) population within Laramie County that may need assistance during evacuation include students, nursing homes, assisted living centers, hospitals, physically and mentally challenged residents, and the Laramie County Detention Facilities. Juvenile and foster care facilities are the responsibility of the business or the State of Wyoming Department of Family Services. All of the identified institutions are required to have internal disaster plans which address evacuation. In addition, the EOC may assist in procurement of specialized transportation resources such as ambulance and vehicles for handicap transportation.

The Access and Functional Needs (AFN) program within Laramie County helps teach and provide resources to people who are not able to care for themselves during a disaster. Under EOC direction, the ESFs will need to consider transportation, housing, food and shelter options for the AFN population.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP) Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 2 or 3 EOC Activation

For an activation Level of 2 or 3 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to a Emergency Evacuation Incident, the following ESFs are expected to be activated:

- **ESF #01 (Transportation):** ensures the coordination of transportation and transportation route restoration during and after local emergencies and disasters. In addition, it ensures transportation support for agencies requiring access and egress to significant events.
- **ESF #03 (Public Works):** Defines the role of local public works and engineering departments in providing resources related to lifesaving or life protection prior to, during and following a disaster.
- **ESF #04 (Firefighting):** Assists with notification of evacuation to citizens
- **ESF #05 (Information & Planning):** Gathers information about the incident and identifies the resources required to respond
- **ESF #06 (Mass Care Services):** Coordinates temporary sheltering and assistance
- **ESF #07 (Resource Support):** Locates and provides supplies to emergency response personnel as needed
- **ESF #13 (Public Safety and Security):** Enforces protective actions and provides safety and security around the incident site
- **ESF #15 (External Affairs):** Provides accurate updates and messaging to the public about protective actions, road closures, or other potential impacts

Primary ESF:

ESF #01 should consider the following for emergency evacuation incident response:

- Coordinating evacuation routes with local agencies and partnering jurisdictions
- Status of transportation infrastructure to be used for evacuation.
- Initiates temporary road closures and alternate routes as needed
- Transportation will facilitate coordination between local agencies and governments and the State regarding the impact of outflow of persons and traffic on the entry of response teams and supplies into the affected area.

Relevant ESF's:

ESF #03 should consider the following for emergency evacuation incident response:

- Provide resources such as vehicles, personnel to assist with traffic movement and crowd control.
- Work with allied agencies to keep routes open and free of debris and to provide signage and barricades.
- Provide assistance to other agencies, outside of the contaminated zone.

ESF #04 should consider the following for emergency evacuation incident response:

- Establish and maintain inner perimeter on hazardous materials incidents.
- Rescue trapped victims and victims in the hazardous atmosphere
- Assist in the evacuation process as required.

ESF #05 should consider the following for emergency evacuation incident response:

- Ensure adequate alert and warning of the public. In coordination with the Cheyenne board of Public Utilities (BOPU) additional alerts and warnings will be sent to residents in advance of flooding.
- Work with Incident Command to communicate protective actions to the public to protect and mitigate impacts to people and property at risk

Cheyenne/Laramie County Emergency Operations Plan

- When the CLC-EOC is activated in advance of the incident, host a virtual planning meeting to determine the state of preparedness and potential impacts from the incident, including impacts to special events, government services, and the community

ESF #06 should consider the following for emergency evacuation incident response:

- Identify temporary sheltering and feeding locations that are safe for use and have not sustained any damage
- Establish the expected number of people requiring shelter, food, and water based on preliminary damage assessment and any protective action orders issued (i.e., number of people evacuating)
- Identify a site for distribution of mass care assistance and receiving unsolicited volunteers and donated goods

ESF #07 should consider the following for emergency evacuation incident response:

- Identify and acquire resources for sheltering and mass care operations
- Identify locations for commodity distribution

ESF #13 Public Safety ESF #13 should consider the following for earthquake incident response:

- Direct overall evacuation operations
- Establish and maintain outer perimeter in coordination with other L.E. agencies
- Provide traffic and crowd control
- Rescue persons threatened by armed and dangerous suspects
- Obtain signed evacuation order from the Elected official, Emergency Management Agency or I C prior to any operation
- Provide security for emergency housing facilities as requested
- Provide security of evacuated area and properties
- Provide assistance to Fire Departments if evacuations are due to the dangers of hazardous materials. (L.E. may have limited capabilities due to improper Personal Protective Equipment (PPE).

ESF #15 (External Affairs):

- Provides accurate updates and messaging to the public
 - Extent of damage
 - Safety information (driving, road closures, etc.)
 - Shelter/Reunification locations
 - Status of government services and restoration estimates
 - Status of healthcare services and facilities
 - Impacts to critical infrastructure and restoration estimates
- Deploy redundant, low-tech communications platforms (such as radio or bulletin boards) in case of power outages and to improve situational awareness
- Monitor social media and other media outlets to inform ongoing damage assessments
- Ensure messages reach all communities, including those with disabilities and limited English proficiency

Appendix A

Emergency traffic policy

- All law enforcement/public safety employees not directly involved in the management of the incident shall be available for traffic control and direction.
- The chief elected official has the authority to close roads and to restrict access to and from all areas of the affected jurisdiction(s).
- Law enforcement/public safety has the authority to remove stalled and parked vehicles which impede the flow of traffic.
- Traffic flow and direction may be altered, reversed, etc. at the direction of the IC.

IC will coordinate changes in traffic flow with law enforcement/public safety through the EOC.

Appendix B

Evacuation Order

- I. An emergency condition exists in Laramie County, Wyoming.
- II. It has been determined that a need exists to evacuate a portion of _____, Laramie County, Wyoming.
- III. Such an evacuation is needed to ensure public safety.

Therefore:

1. The _____, Laramie County, Wyoming is requesting the immediate evacuation of: _____

2. The jurisdiction of _____, Laramie County, Wyoming requests those needing special assistance to call _____. This number has been established to respond to evacuation assistance requests.
3. The jurisdiction of _____, Laramie County, Wyoming is restricting all entry to the established hazard area. No one will be allowed to re-enter the area until the evacuation order has been removed.
4. Information and instructions will be transmitted to the media for dissemination. Public information will be disseminated to those in need of shelter assistance.
5. The jurisdiction of _____, will advise the public of the lifting of this order when public safety is assured.

_____	____/____/____
Chief Elected Official	Date

_____	____/____/____
Chief County Official	Date

_____	____/____/____
Clerk	Date

Appendix C

Evacuation Protocols

General

Under Wyoming statute, no law enforcement officer or public safety official has the legal right to impose a mandatory evacuation order on citizens in their own homes. Citizens should be informed of the need to leave a hazardous area and the possible consequences of not leaving. Citizens who obstruct the evacuation process may be arrested.

The protocols cover door to door, siren alert, and the mobile public address process. These methods may be conducted alone or in combination or in conjunction with the Emergency Broadcast System (EBS), Cable Interrupt System, and through IPAWS.

Door to Door

Door to door contact is an effective but time and labor intensive method of alerting, warning and evacuating an area. More detailed information can be shared with the population and positive confirmation can be made that the individual received the warning, understood the instructions and knew the consequences of their actions.

Emergency information to provide:

- Type of incident
- Expected duration
- Available time to evacuate
- Recommended actions
- Implication of not following recommended actions.
- Neighborhood congregation points for citizens needing transportation.
- Evacuation routes
- Reception and shelter locations

Conduct door to door evacuations

- Attempt to contact residents
- Present evacuation information

Reporting

- Notify IC as areas or blocks are cleared.
- Notify IC number of residents not evacuating

Mobile Public Address

Mobile public address is more effective than door to door contact but you are only able to convey a limited amount of information. It is most effective used in combination with an emergency broadcast system, Cable Override and door to door contact. It may be used to alert and warn the public prior to the request to evacuate or to advise of protective actions short of evacuation.

Annex E - Nuclear/Radiological Incident

Objective

The Nuclear/Radiological Incident Annex aims to serve as a comprehensive guide tailored for local governments and agencies, facilitating effective coordination and providing essential guidelines for public safety personnel engaged in preparedness activities. This strategic document specifically addresses Nuclear/Radiological Incidents, encompassing accidents, terrorism, and sabotage. Additionally, it establishes a framework for seamless collaboration between state agencies and local jurisdictions in responding to incidents involving radioactive materials. The Annex delineates clear responsibilities and ensures the coordination of local agencies within their jurisdictions, fostering collaboration with neighboring jurisdictions for a cohesive and efficient response to incidents involving radioactive materials.

Scope

The local response to a specific incident is contingent upon various factors such as the local resources' capacity for response, the type and quantity of materials involved, the potential impact on the environment, and the size of the affected area. In the event of an incident, licensees, local jurisdictions, and the State of Wyoming share responsibilities concerning response and recovery efforts. This Annex serves as a dynamic framework to guide decision-making and actions, ensuring a well-coordinated and effective response to Nuclear/Radiological Incidents.

Shipper/Carrier/Licensee

The shipper, carrier, and licensee must be in compliance with all federal, state, and local regulations. They are responsible for notifying proper authorities of an incident, providing expertise and shipping information to public safety and response personnel; providing equipment and personnel to conduct clean-up and recovery of the incident site; and reimburse response agencies as provided by law.

Local Jurisdictions

The "local jurisdiction" is defined as that local governmental entity which authorizes, regulates, or is otherwise deemed responsible for the health, welfare, and protection of residents and their property within the geographical boundaries in which a radioactive material incident occurs.

Local jurisdictions have the primary responsibility for performing emergency response functions. Local emergency management personnel, law enforcement officials, fire department officials, and emergency medical technicians/paramedics will provide their usual range of emergency services for an incident involving radioactive materials. This includes the responsibility for having personnel trained in radiological protection which would include scene assessment; application of protective measures (time, distance, and shielding); the use of instrumentation; maintaining a current roster of trained personnel, and maintaining an adequate quantity of radiological instruments/equipment.

In many cases, shippers/carriers/licensees may not be able to exercise their responsibilities quickly enough to protect the public from the consequences of a radiological incident. The local jurisdiction must be prepared to effectively initiate life-saving and protective measures. This includes, but may not be limited to:

- Emergency planning
- Information gathering and exchange
- Situation analysis
- Evacuation and shelter of persons threatened
- Rescue and medical care
- Initiating and supporting radiological monitoring activities
- Fire fighting
- Access/egress control
- Public information
- Directing protection actions and decontamination when recommended by appropriate technical authorities
- Making notifications to other local and state authorities

Cheyenne/Laramie County

Cheyenne and Laramie County recognizes that as a regional transportation hub for both road and rail and the placement of a military installation, it may be more susceptible to an accident involving radioactive materials.

As provided by state law, the Wyoming Highway Patrol is designated as the “Incident Commander” for all incidents involving radioactive materials on highways and interstates. Laramie County, its first responders, and HazMat teams rely on State Radiological Services to assist in response and determination of leaks and radiation levels.

Concept of Operations

All emergency services within Laramie County use the NIMS/ICS system to manage and coordinate response to any type of radiological incident.

Consequence Management

Consequence management focuses on mitigating the impact of an incident on both lives and property. It encompasses a range of measures designed to safeguard public health and safety, restore crucial government services, and offer emergency relief to individuals, businesses, and governments affected by the incident. FEMA serves as the Lead Federal Agency for consequence management. The development of this guide is focused on providing information and instructions to effectively address consequence management in incidents involving radioactive materials, whether they occur during transportation, within fixed facilities, or as a result of terrorism.

Incident Type and Classification

Incident Type: For the purpose of this guide, there are three types of incidents involving radioactive materials. They are:

- **Transportation Incident:** An incident which occurs in association with any activity involving the movement of radioactive materials by a motorized conveyance on roadways, to include trucks, trains, planes, automobiles, etc. (This does not include movement of materials at a facility by forklift, hand-truck or other transfer method. Such an incident would be considered a fixed facility incident.)
- **Fixed Facility Incident:** An incident which occurs in association with any activity involving radioactive materials at a fixed location. This would include industrial sites (uranium processing), temporary work sites (oil well injections, non-destructive testing of welds, etc.), manufacturing sites (thickness gauges, etc.), or any other location which does not involve the movement of radioactive materials by a motorized conveyance on roadways as described in #1a above.
- **Terrorism Incident:** An incident which occurs in association with any deliberate act of sabotage or destruction which includes the use of radioactive materials. This type of incident may include transportation or fixed facility but, due to the initiating event, will require coordination of response actions to ensure crime scene issues are considered.

Incident Classification: There are also three classifications for incidents involving radioactive materials. They apply to each type of incident described above and are as follows:

- **Level I:** An incident in which no release of radioactive material has occurred. This is determined by visual assessment of the incident scene. If there is not a high confidence level by the response personnel in declaring a Level I incident, it should default to a Level II incident.
- **Level II:** An incident in which there may be a release of radioactive materials. This is determined by visual assessment of the incident scene. Level II would be declared when there is reasonable doubt to the integrity of the containment of the radioactive materials (package shows significant damage, but there is no visible sign of material release).
- **Level III:** An incident in which there is a release of radioactive materials. This is determined by visual assessment of the incident scene. There is a high level of confidence by the response personnel in declaring a Level III incident.

Incident Response Phases

Phase I – Actions: This phase includes Notification, Classification, and Activation:

1. **WOHS Notification** - This component of Phase I begins when the initial call is received by public safety officials. If first responders determine there is a radiological aspect to the incident, or that information is supplied during the initial call, a request for assistance can/is made through Cheyenne/Laramie County EMA and/or the WOHS Duty Officer for state assets such as WOHS Radiological Services, RERT 7, and 84TH Civil Support Team.
2. **Incident Classification** - The on-scene responder shall initiate the classification of the incident based on their assessment of the scene. If a notification has been made to the WOHS Duty Officer, personnel or responding team(s) will make contact with appropriate personnel at the scene to determine the status of the incident and obtain additional information if possible. If the information provided indicates a need to change the classification, the responding team(s) and the on-scene personnel (preferably the Incident Commander) will make that change cooperatively.

3. **Activation** - If assistance beyond verbal information is requested or determined necessary, notified team(s) will load out applicable equipment and supplies and respond to the incident scene. If it is determined that additional personnel or specialties (environmental, health, etc.) are required to support the incident, those notifications will be made by responding team(s) at this time. The Incident Commander will be notified when responding team(s) depart for the incident and an estimated time of arrival (ETA). This same information will be requested from all other support personnel activated to support the response. Upon departure for the incident scene, the next phase of the response will begin.

Phase II – Response: This phase begins upon departure from the appropriate responding team's facility. While en-route, additional information may be obtained from the scene or other resources, additional notifications made, and a review of operational options can be discussed.

1. Upon arrival at the incident scene, team personnel should provide proper identification to on-scene personnel and check-in with the Logistics and/or the Incident Commander. The team lead should request an update briefing by the IC to determine the current status of the situation, other hazards present and current action plan. The team lead should provide a review of capabilities and recommendations for addressing the radiological aspect of the incident. The best option should then be chosen in a cooperative manner by all response personnel as appropriate.
2. Additional visual assessments and information gathering may be required prior to any entry into the incident scene. Appropriate level of personal protection with IC approval shall be utilized. Entry activities should be conducted in a timely manner. All information gathered and the resulting follow-up recommendations should be provided to the command personnel. All activities within the incident scene should be considered based on a risk-benefit outcome. Scene assessment should focus on determining impacts on the health of responders, victims, and the public and the potential for environmental abuse. Further actions, such as bioassays, evacuation/sheltering, and recovery requirements should be based on this assessment. Provide radiological monitoring equipment, to include survey instruments, dosimetry, diagnostic instruments, sampling supplies, and basic anti-contamination equipment (Personal Protective Equipment- PPE).

Phase III – Recovery: Recovery options should be presented to the command personnel and coordinated with recovery personnel (provided by shipper/carrier). If recovery capabilities of the shipper/carrier prove unacceptable to ensure public well-being, IC in coordination with SMEs may undertake appropriate options to ensure the incident scene does not result in a negative public health impact. SMEs and other support personnel will also insure that site recovery is to pre-incident conditions.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP) Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 3 or 2 EOC Activation

For an activation Level of 3 or 2 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to a Nuclear/Radiological incident, the following ESFs are expected to be activated:

- **ESF #01 (Transportation):** Initiates temporary road closures and alternate routes as needed
- **ESF #02 (Communications):** Protection, restoration, and sustainment of national cyber and information technology resources
- **ESF #03 (Public Works):** Assesses potential impacts to the public drinking water supply or other public infrastructure
- **ESF #04 (Firefighting):** Provides personnel, equipment, and resources for response, as needed
- **ESF #05 (Information & Planning):** Gathers information about the incident and identifies resources required to respond
- **ESF #07 (Resource Support):** Locates and provides supplies to emergency response personnel, as needed
- **ESF #08 (Public Health and Medical Services):** Coordinates protective actions for medical staff, first responders, and impacted populations; deploys medical resources to the incident, as needed
- **ESF #10 (Hazardous Materials):** Oil and hazardous materials (chemical, biological, radiological, etc.) response
- **ESF #11 (Agricultural, Natural, and Cultural Resources):** Assesses potential impacts to natural resources, wildlife, water sources, and the environment
- **ESF #12 (Energy):** Energy infrastructure assessment, repair, and restoration Energy industry utilities coordination Energy forecast
- **ESF #13 (Public Safety and Security):** Enforces protective actions and provides safety and security around the incident site
- **ESF #15 (External Affairs):** Provides accurate updates and messaging to the public about protective actions, road closures, or other potential impacts

Primary ESF:

ESF #10 should consider the following for Nuclear/Radiological incident response:

- Ensure proper Nuclear/Radiological response protocols are being followed.
- Ensure that an IC and ICS has been adequately established at the incident, including development of a written Incident Action Plan (IAP).
- The local Nuclear/Radiological response agency with authority is responsible for detection, assessment, and monitoring of the spill site.
- Coordinate with ESF #08 (Public Health and Medical Services) to activate and deploy medical resources to the incident, as well as determine protective actions for staff, first responders, and impacted populations.
- Develop and issue protective actions for the public and distribute in coordination with ESF #15 (External Affairs) through the Joint Information System (JIS).
- Coordinate with ESF #11 (Agriculture, Natural, and Cultural Resources) to assess potential impacts to natural resources within or near the incident site, as well as implement mitigation actions for further contamination.
- Anticipate needs for additional response resources, including RERTs, CSTs, WY DEQ, and EPA Environmental Response Teams (ERT).

Relevant ESF's:

ESF #01 should consider the following for a Nuclear/Radiological incident response:

- Assess the transportation impacts from the spill, including location, duration, and the need for alternate routes.
- Provide information on road closures and alternate routes for distribution to the public in coordination with ESF #15 (External Affairs) for distribution through the JIS.
- Address the need for evacuation planning and the identification of evacuation routes

ESF #02 should consider the following for a Nuclear/Radiological incident response:

- Coordination with telecommunications and information technology industries
- Restoration and repair of telecommunications infrastructure
- Protection, restoration, and sustainment of national cyber and information technology resources

ESF #03 should consider the following for a Nuclear/Radiological incident response:

- Infrastructure protection and emergency repair
- Infrastructure restoration
- Engineering services and construction management
- Emergency contracting support for life-saving and life-sustaining services

ESF #04 should consider the following for a Nuclear/Radiological incident response:

- Mobilize resources, including personnel and equipment, to support decontamination.
- Address potential fire danger at incident site.

ESF #05 should consider the following for a Nuclear/Radiological incident response:

- Develop and distribute reports on the status of operations and impacts, including Situation Reports as needed.
- Ensure the timely warning of Laramie County residents and visitors of potential or actual impacts, including relaying the IC's issued protective actions
- Assess the need for sheltering or mass care services based on protective action orders.
- Organize information shared through other ESFs to establish situational awareness of impacts across the community, including human health, environmental damages, or disruption of critical infrastructure.
- Develop a process for information sharing between local incident management agencies and other appropriate sectors that can offer support.
- Ensure proper hazardous materials notifications are made to the WOHS Duty Officer, SERC, WY DEQ, and NRC, as necessary.

ESF #07 should consider the following for a Nuclear/Radiological incident response:

- Assist with specialized Nuclear/Radiological resource requests such as RERTs, CSTs, and EPA ERTs.

ESF #08 should consider the following for a Nuclear/Radiological incident response:

- Organize any necessary care or protective actions among hospitals, medical personnel, emergency service providers, and technical specialists.
- Ensure proper lockdown and decontamination procedures are initiated immediately upon notification of an incident.
- Provide public health response activities such as EMS triage, treatment, and transportation or evacuation of impacted individuals.
- Monitor the health and safety of first responders and healthcare staff.
- Coordinate with impacted drinking water supply entities, ESF #03 (Public Works), and ESF #11 (Agriculture, Natural, and Cultural Resources) on the issuance of boil water orders, do not drink orders, or other protective actions around contaminated drinking water.
- Provide information, personal protective actions, signs and symptoms, and other relevant human health information regarding the incident for distribution to the public in coordination with ESF #15 (External Affairs) for distribution through the JIS.

ESF #11 should consider the following for a Nuclear/Radiological incident response:

- Assess potential impacts to natural resources during initial incident response and advise on immediate protective measures.
- Provide appropriate response actions to conserve, rehabilitate, recover, and restore natural, cultural, and historic resources impacted by the incident.
- Assess rural drinking water impacts from the spill in coordination with ESF #08 (Public Health and Medical).
- Monitor air quality levels in the area surrounding the incident site and initiate response to heightened levels of pollutants.

ESF #12 should consider the following for a Nuclear/Radiological incident response:

- Energy infrastructure assessment, repair, and restoration
- Energy industry utilities coordination
- Energy forecast

ESF #13 should consider the following for a Nuclear/Radiological incident response:

- Provide access control and security to impacted areas.
- Inform, initiate, and enforce protective actions, including evacuations as needed.

ESF #15 should consider the following for a Nuclear/Radiological incident response:

- Organize and coordinate unified messaging for the public about the incident, including:
 - Critical infrastructure disruptions
 - Road closures and alternative routes
 - Protective actions
 - Signs and symptoms of contamination
 - Ongoing incident operations
- Confirm jurisdictional communication strategies to prevent any misinformation sharing.

Annex F - Terrorism Incident Response

Purpose

The purpose of this plan is to define and implement procedures for events concerning terrorism and possible use of Weapons of Mass Destruction (WMD) against public safety personnel and citizens of the City of Cheyenne and Laramie County. These weapons may be classified as, but not limited to, chemical, biological, radiological nuclear and explosive (CBRNE). This Annex will also be a reference to public safety first responders outlining responsibilities and procedures in confirming presence of CBRNE weapons, and notifying the appropriate federal, state, or local agency.

Terrorism is defined as: “The unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof in furtherance of political, religious, or social objectives.”

This plan will further outline the transition from “crisis management” to “consequence management” roles of involved agencies.

Concept of Operations

General

This plan is based on the premise that the functions of agencies involved in an event will have operations that parallel their day-to-day activities. The same resources may be employed elsewhere depending on the need and function. Activities that do not contribute directly to the event may be suspended or redirected to the event operations for the duration.

Assumptions

No single agency within Cheyenne or Laramie County possesses the level of expertise nor has the assets to act unilaterally on a widespread response to a suspected act of terrorism, particularly if it is determined to be a WMD incident.

The response to terrorism incidents is divided into two separate and distinct phases:

- **Crisis Management:** Measures to identify, acquire, and plan for the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism
- **Consequence Management:** Measures to protect public safety and health, restore essential government services, and provide emergency relief to governments, businesses, and individuals affected by the consequences of terrorism.
 - Emergency Management is specifically concerned with its responsibilities for consequence management, the effects of terrorism incidents, training of first responders, and the safety of all participants throughout the incident.
 - The Incident Command System (ICS) and NIMS will be utilized during these events.
 - If appropriate Personal Protective Equipment (PPE) is not available, entry into the suspected contaminated area may be delayed until the material dissipates to a level allowing safe entry by responders.

Cheyenne/Laramie County Emergency Operations Plan

- An act of terrorism involving weapons of mass destruction may produce major consequences that would overwhelm the capabilities and resources of local public safety. First responders dispatched to these incidents may not know that they are entering a terrorist or WMD event, therefore, incapacitating them.

Scope

- This plan will apply to all threats or acts of terrorism within Laramie County including Albin, Burns, Cheyenne, and Pine Bluffs.
- This plan will apply to all public safety entities within Cheyenne and Laramie County including assistance provided by private sector contractors engaged in assisting public safety within this plan.
- This plan will be considered as a special event Annex for Terrorism to the Cheyenne/Laramie County Emergency Management Agency's Emergency Response Plan.

Policies

The lead federal agency responsible for crisis management for an incident involving WMD will be the Department of Justice, which has delegated this task to the Federal Bureau of Investigation. The law enforcement agency of the jurisdiction will be the lead agency locally for incidents involving threats or suspected use of WMD. Support agencies will be the Cheyenne Police Department, Laramie County Sheriff's Office, and Wyoming Division of Criminal Investigation, Cheyenne Fire Rescue Department, Laramie County Fire Warden, and Laramie County Fire Districts.

The affected governmental jurisdiction along with EMA has primary responsibility for consequence management of incidents involving WMD, and will be supported by the ESF's, NGO's and private organizations. Other state and local agencies may be tasked if it is determined their support is required.

Upon determining that a WMD incident has occurred, the Cheyenne/Laramie County Emergency Response Plan may be activated. The City Council or Board of County Commissioners may declare that an emergency exists whenever the threat or actual occurrence of an incident is, or threatens to be, of sufficient severity and magnitude to require significant fiscal assets or resources to be committed to the incident, and a coordinated response is required. The Federal Bureau of Investigation Resident Agent in Charge (FBIRAC) will be notified immediately when a threat of any significance or actual incident has been determined to have occurred. All local crisis management will be coordinated with the FBIRAC.

1. During the Crisis Management phase:
 - a. The Incident Command System (ICS) will be used to provide law enforcement direction and control during the Crisis Management operations. The appropriate law enforcement commander will designate the Incident Commander.
 - b. The Incident Commander will immediately notify the Director of the Cheyenne/Laramie County Emergency Management Agency, so that Consequence Management actions can be initiated. The CLCEMA Director or a representative will notify the Director of the Wyoming Office of Homeland Security (WOHS) and advise that office of the incident. Situation reports will be completed and forwarded in a timely manner.

Cheyenne/Laramie County Emergency Operations Plan

- c. The Federal Bureau of Investigation (FBI), in cooperation with the law enforcement agency in command, will exercise authority for managing the federal response at the incident site.
 - d. If requests from the FBI are for state law enforcement assistance and non-law enforcement assistance, a local or state liaison officer will be appointed and the request forwarded to the Wyoming Office of Homeland Security.
 - i. All emergency management assets will be directed to assist the FBI as much as is practical until the Crisis Management phase has concluded.
 - e. If a suspected terrorist incident has occurred where injuries and/or death have or may have occurred, Consequence Management activities may be implemented prior to or in conjunction with Crisis Management activities. In this situation, activities will be conducted under the control and supervision of the Incident Commander.
 - f. Once the Crisis Management activities are completed to the satisfaction of the FBI and appropriate state and local law enforcement agencies, Consequence Management activities will begin, and will be coordinated through the Laramie County Emergency Management Agency.
2. During the Consequence Management phase:
- a. The FBI will no longer be responsible and direction and control activities will revert to the local and state Emergency Management systems.
 - b. Procedures for requesting State and federal assistance for response and recovery from a terrorist incident will follow the current procedures as outlined in the Cheyenne/Laramie County Emergency Response Plan.
 - i. Once local and mutual aid resources are depleted, the Mayor or Chairman of the Board of Laramie County Commissioners will request assistance in coordination with the Cheyenne/Laramie County Emergency Management Agency and the investigating jurisdiction through the WOHS Duty Officer. Assurances will be made that all city and county resources have been utilized.
 - ii. The WOHS will appoint a liaison to monitor the situation pending the declaration.

Based on the severity of the incident, the Director of WOHS would be contacted and requested to recommend to the Governor that an emergency be declared. The Governor, based on relevant information, may issue a State Declaration of Disaster, and request that the President of the United States issue an emergency and/or Major Disaster Declaration for Wyoming. These actions are necessary to receive federal disaster aid as provided for in the Stafford Act (Public Law 93-288 as amended).

Direction and Control

General

Direction and control of the emergency response and recovery operation within Cheyenne and Laramie County will be exercised in accordance with the Cheyenne/Laramie County Emergency Response Plan and Annexes.

Cheyenne/Laramie County Emergency Operations Plan

The Chief Elected Officials will, as soon as practical, request assistance from the State of Wyoming based on the escalation of the situation, and in coordination with the Cheyenne/Laramie County Emergency Management Agency and the investigating jurisdiction. The Federal Bureau of Investigation will be notified immediately of any threats or acts of terrorism in accordance with this annex.

Upon response of the FBI, the Special Agent in Charge (SAC), and local law enforcement authorities will establish one centralized unified command post and exercise direction and control appropriate and consistent with their respective responsibilities to effectively accomplish all law enforcement duties.

It will be the responsibility of local government to take the lead role with support provided from the State of Wyoming and any federal government assets. Primary and support agencies will assure that their respective personnel are trained and prepared to operate in the event regular personnel are unavailable. They will identify alternate and back up personnel, understanding the standard operating procedure for response to suspected or known terrorist events, and ensure that appropriate guidelines contain sufficient detail so that these personnel can use them in performance of their duties.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP) Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 3 or 2 EOC Activation

For an activation Level of 3 or 2 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to a Terrorism Incident, the following ESFs are expected to be activated:

- **ESF #05 (Information & Planning):** Gathers information about the incident and identifies the resources required to respond
- **ESF #07 (Resource Support):** Locates and provides supplies to emergency response personnel, as needed
- **ESF #10 (Hazardous Materials):** Handles the control and containment of a threatened or actual intentional release of hazardous materials
- **ESF #13 (Public Safety and Security):** Enforces protective actions and provides safety and security around the incident site
- **ESF #15 (External Affairs):** Provides accurate updates and messaging to the public

Primary ESF:

ESF #13 should consider the following for terrorism incident response:

- Serves as the primary ESF for a terrorism incident in coordination with the Federal Bureau of Investigations (FBI)
- Mobilizes the resources and capabilities of public safety agencies and security to protect life, property, and maintain law and order

- Supports the FBI's investigation and intelligence activities

Relevant ESF's:

ESF #05 should consider the following for terrorism incident response:

- Working with ESF #13 (Public Safety and Security), establish guidelines for approval of release of information.
- Develop and distribute reports on the status of operations and impacts, including Situation Reports as needed.
- Ensure the timely warning of Laramie County residents and visitors of potential or actual impacts, including relaying protective actions ordered by law enforcement
- Organize information shared through other ESFs to establish situational awareness of impacts across the community, including:
 - Status of critical infrastructure
 - Sheltering and mass care needs
 - Any reports of civil unrest
- Develop a process for information sharing between local incident management agencies and other appropriate sectors that can offer support.

ESF #07 should consider the following for terrorism incident response:

- Assist with terrorism-specific resource requests such as Regional Emergency Response Teams (RERT) or National Guard Civil Support Teams (CSTs).

ESF #10 should consider the following for terrorism incident response:

- Detect and assess the extent of environmental contamination.
- Notify receiving hospitals of the need for lockdown or decontamination protocols.
- Manage clean-up of hazardous materials that are released.

ESF #15 should consider the following for terrorism incident response:

- Ensure involvement from law enforcement agencies to understand sensitive data breaches and ensure public information does not compromise an ongoing investigation.
- Organize and coordinate unified messaging for the public about the incident.
- Confirm jurisdictional communication strategies to prevent any misinformation sharing.

Organization and Assignment of Responsibilities

1. First Responder

- a. As a first responder to weapons of mass destruction or terrorist incidents, it is important to conduct an initial size up of the area, and be aware of the potential for secondary devices, which are intended to injure or kill rescue workers within the area. This is usually a conventional weapon, but may be others.
- b. Attempt to obtain as much information as possible concerning the incident including:
 - i. How many people are involved?
 - ii. If more than one person is involved, are there similar symptoms presented?
 - iii. Where is the reporting party?
 - iv. Is the reporting party in or near contact with the victim(s)?
- c. Approach to a suspected scene must always be done from an uphill and up wind direction.
- d. Avoid all liquid and vapor clouds.

Cheyenne/Laramie County Emergency Operations Plan

- e. Use Personal Protective Equipment (PPE) if available. If not available, do not enter a scene.
 - f. Personal protective equipment will be of sufficient level as to properly protect the responder at the level indicated by the threat.
2. Emergency Support Functions (ESFs)
- a. While all agencies may be involved in some aspect of the response to a terrorist incident, there may be certain Emergency Support Functions that are anticipated to play a more active role in the event.
 - b. In regards to the nature of the emergent situation, the law enforcement agency with jurisdiction will act as the primary functional agency for Crisis Management, with the coordination and assistance of the Cheyenne/Laramie County Emergency Management Agency. The Wyoming Office of Homeland Security may be requested to provide a coordination role, but specifically, will assist in coordination with the Governor's Office.

Direction and Control

General

Direction and control of the emergency response and recovery operation within Cheyenne and Laramie County will be exercised in accordance with the Cheyenne/Laramie County Emergency Response Plan and Annexes.

The Chief Elected Officials will, as soon as practical, request assistance from the State of Wyoming based on the escalation of the situation, and in coordination with the Cheyenne/Laramie County Emergency Management Agency and the investigating jurisdiction. The Federal Bureau of Investigation will be notified immediately of any threats or acts of terrorism in accordance with this annex.

Upon response of the FBI, the Special Agent in Charge (SAC), and local law enforcement authorities will establish one centralized unified command post and exercise direction and control appropriate and consistent with their respective responsibilities to effectively accomplish all law enforcement duties.

It will be the responsibility of local government to take the lead role with support provided from the State of Wyoming and any federal government assets. Primary and support agencies will assure that their respective personnel are trained and prepared to operate in the event regular personnel are unavailable. They will identify alternate and back up personnel, understanding the standard operating procedure for response to suspected or known terrorist events, and ensure that appropriate guidelines contain sufficient detail so that these personnel can use them in performance of their duties.

Annex G – Wildland Fire

In the coordination of wildfire response efforts, key agencies in Laramie County play vital roles. These include Laramie County Fire Districts 1-10, the Wyoming State Forestry Division, F.E. Warren Air Force Base Fire, Wyoming Air National Guard Fire Department, Cheyenne Fire Rescue, Cheyenne/Laramie County Emergency Management Agency, and the Laramie County Combined Communications Center. This collaborative effort involves the coordination of various resources and expertise to effectively address wildfire incidents. Additionally, cooperating agencies, such as WYDOT, Wyoming Highway Patrol, Wyoming Highway Patrol Dispatch, Cheyenne Police Department, Laramie County Sheriff's Office, Holly Frontier Refinery Fire Brigade, Laramie County Road & Bridge Department, Wyoming Office of Homeland Security, Wyoming Department of Environmental Quality, and the National Weather Service, contribute to the overall response strategy, ensuring a comprehensive and unified approach to wildfire management and mitigation.

Purpose

This annex serves as a comprehensive guide delineating the roles, responsibilities, and coordinating mechanisms for managing wildland fire incidents within Laramie County, Wyoming. Encompassing the incorporated areas of the City of Cheyenne, and the towns of Albin, Burns, and Pine Bluffs, this overview addresses the potential significant impacts wildland fires can have, particularly in the Wildland Urban Interface (WUI). Local, state, and federal agencies prepare for imminent wildland fires, with the Wyoming State Forestry Division overseeing fire management on 3.6 million surface acres of state trust land and collaborating on cooperative fire management on private and federal lands statewide. Laramie County, protected by nine fire districts and three full-time paid departments, requires coordinated county-wide suppression efforts. Rapid and efficient response efforts are essential to extinguish wildland fires, provide temporary shelter, and assess community and infrastructure impacts. Refer to ESF 4 – Firefighting, within this plan for additional details.

Objectives

Provide pertinent information to local, regional, state, and federal decision-makers regarding the state's planned response to wildland fires.

Define coordination strategies, illustrating how local, regional, state, tribal, and federal entities collaborate throughout wildland fire mitigation, preparedness, response, and recovery.

Direct users to applicable functional annexes within the State Emergency Management Plan and other relevant documents.

Situation

Laramie County faces the potential for large wildland urban interface and wildland fires, often triggered by human activities. The expanding wildland-urban interface heightens the risk of substantial losses.

Assumptions

Response to significant fires may be complex due to hazardous materials or extreme weather conditions. Planning and preparedness for wildland-urban interface and wildland fire, across all emergency management phases, are collective responsibilities of all fire entities protecting Laramie County and the Cheyenne/Laramie County Emergency Management Agency. Response capabilities may be compromised by factors such as inadequate equipment, a shortage of trained personnel, insufficient funding, environmental conditions, multiple concurrent incidents, equipment malfunctions, human error, jurisdictional or legal issues, and incident location and access challenges. Notification may be received from private citizens, first responders en-route or on scene, federal, state, or local agencies, or other sources. All local city and county emergency services are dispatched through the Combined Communications Center in Cheyenne ("DISPATCH"), following established protocols and agreements.

EOC Activation

ESF Duties under Level 1 EOC Activation

In the event of Level 1 activation at the CLC-EOC, the CLC-EOC Manager will initiate the activation of all 15 Emergency Support Functions (ESFs). As the situation unfolds, the staffing levels at the CLC-EOC may be adjusted, either increased or decreased, based on the scale, complexity, or duration of the incident or event. Refer to the Emergency Operations Plan (EOP) Base Plan, specifically the section on EOC Activation, for a breakdown of all activation levels and the associated procedural steps.

ESF Duties under Level 3 or 2 EOC Activation

For an activation Level of 3 or 2 of the Cheyenne/Laramie County Emergency Operations Center (CLC-EOC) due to a wildfire incident, the following ESFs are expected to be activated:

- **ESF #01 (Transportation):** Initiates temporary road closures and alternative routes as needed; supports planning for evacuations
- **ESF #05 (Information and Planning):** Gathers information about the incident and identifies resources required to respond
- **ESF #06 (Mass Care):** Coordinates temporary sheltering and assistance
- **ESF #07 (Resource Support):** Locates and provides supplies to emergency response personnel as needed
- **ESF #08 (Public Health and Medical Services):** Addresses emerging medical needs due to wildfire impacts, including smoke/poor air quality
- **ESF #11 (Agriculture, Natural, and Cultural Resources):** Assesses potential and actual impacts to natural and cultural resources
- **ESF #15 (External Affairs):** Provides accurate updates and messaging to the public

Primary ESF:

ESF #04 should consider the following for wildfire incident response:

- Serves as the primary ESF for a wildfire incident
- Coordinates wildland firefighting operations and requests for mutual aid

Relevant ESF's:

ESF #01 should consider the following for wildfire incident response:

- **Provide information on the safest and most reliable routes for emergency personnel**
- Assess the transportation impacts from the wildfire and the need for additional road closures, alternate routes, or other protective actions.
- Monitor conditions that may restrict people from obtaining critical services or supplies, especially vulnerable populations who may be isolated due to road closures.
- Work with ESF #03 (Public Works) to provide equipment and personnel for clearing roadways of debris as needed.
- Provide information on road closures and alternate routes for distribution to the public in coordination with ESF #15 (External Affairs) through the Joint Information System (JIS).

ESF #05 should consider the following for wildfire incident response:

- Ensure adequate alert and warning of the public
- Work with Incident Command to communicate protective actions to the public to protect and mitigate impacts to people and property at risk
- When the CLC-EOC is activated in advance of the incident, host a virtual planning meeting to determine the state of preparedness and potential impacts from the incident, including impacts to special events, government services, and the whole community.

ESF #06 should consider the following for wildfire incident response:

- Determine the need to establish “clean air” centers to serve people significantly impacted by smoke and poor air quality, or other vulnerable groups.
- Organize temporary shelter accommodations for vulnerable populations and/or evacuees.
- Consider the need for a Family Assistance Center (FAC) if an incident and subsequent evacuations/displacement increase.
- Monitor protective actions that may impact vulnerable populations who need additional support to evacuate or implement the recommended actions.

ESF #07 should consider the following for wildfire incident response:

- Identify and acquire resources to support “clean air” shelters and temporary accommodations for evacuees as needed.

ESF #08 should consider the following for wildfire incident response:

- Monitor protective actions that could affect healthcare providers and vulnerable groups that receive treatments (such as dialysis) or rely on power for medical equipment.
- Identify potential impacts to vulnerable populations and communicate additional resource needs to the CLC-EOC to support equitable response. Vulnerable populations for a wildfire (and smoke impacts) may include:
 - Seniors/elderly people
 - People with significant medical needs
 - Pregnant women
 - People with pre-existing pulmonary or cardio vascular conditions
- Support the development of public messaging on health impacts from smoke and poor air quality for distribution to the public in coordination with ESF #15 (External Affairs) through the JIS.

ESF #11 should consider the following for wildfire incident response:

- Assess potential impacts to natural resources during initial incident response and advise on immediate protective measures.
- Provide appropriate response actions to conserve, rehabilitate, recover, and restore natural, cultural, and historic resources impacted by the incident.
- Provide just-in-time wildfire mitigation actions to landowners that they can implement safely to reduce the impacts to their property from wildfire.
- Monitor air quality levels and support the development of public messaging on air quality monitoring for distribution to the public in coordination with ESF #15 (External Affairs) through the JIS.

ESF #15 should consider the following for wildfire incident response:

- Provide emergency information to the public focused on life safety. Topics may include:
- Air quality information and subsequent health impacts
- Preparing for evacuation or other protective actions
- Home hardening and preparation
- Clean air centers, temporary shelters, and FAC locations, if established
- Extent of damage and casualties
- Safety information (driving, road closures, etc.)
- Post-wildfire actions and potential secondary hazards

Annex H - Snow Plan

Purpose

Under the authority of Laramie County, the City of Cheyenne, and the Wyoming State Government, the Cheyenne/Laramie County Emergency Management Agency (CLCEMA) has been given the directive by all governments to recommend:

- Full closure of business due to weather conditions
- Daytime closure due to inclement weather conditions
- Delayed opening or early release due to unsafe road and/or travel conditions

Objective

- This plan will be implemented when travel and weather conditions are degraded to a point that the health, safety and welfare of the employees of the City of Cheyenne, Laramie County and State of Wyoming become adversely affected.
- To establish a notification procedure for the implementation of government closures or delayed opening due to travel conditions.

Scope

This plan affects all of Laramie County Government, Laramie County School District 1, the City of Cheyenne, and Wyoming State government offices in and near Cheyenne.

This plan does not affect the Towns of Albin, Burns, Pine Bluffs, Laramie County School District 2 or F.E. Warren AFB. However, recommendations can be made to any entity within Laramie County for the purposes of this plan.

Plan

This plan supersedes all other plans by date.

CLCEMA will continually monitor weather conditions affecting Southeast Wyoming and all cities and towns within. Emergency Management will contact any agency it feels will enhance the decision to close government operations. Including but not limited to:

- National Weather Service
- Wyoming Highway Patrol
- Wyoming Office of Homeland Security/Office of the Governor of Wyoming
- Laramie County School District 1
- Laramie County School District 2
- Laramie County Fire Districts
- Cheyenne Fire and Rescue
- Laramie County Public Works
- Cheyenne Police Department
- American Medical Response
- Black Hills Energy
- High West Energy
- Cheyenne Regional Medical Center EMA
- Veteran Affairs Emergency Manager

Cheyenne/Laramie County Emergency Operations Plan

- WYDOT
- Cheyenne-Laramie County Health Department
- Board of Public Utilities
- Cheyenne Laramie County Combined Communications Center

During periods of severe weather, regardless of time of day, EMA will contact any of those agencies listed to determine a course of action to be recommended and implemented by all governments. Additional agencies may be included in the Snow Plan conference calls in the event there are significant issues, i.e. Blizzard Warnings, Major power outages, sheltering needs, etc. Information about weather affecting the general area will be gathered and recommendations from all agencies will be compiled to give the best possible directive. The directive will be based upon the concern for the health, safety and welfare of the citizens.

EMA will work in conjunction with and agree with the majority of the following entities:

- Wyoming Office of Homeland Security
- Office of the Governor of Wyoming
- Laramie County School District 1
- City of Cheyenne
- Laramie County

Closure Decision

As information has been compiled, EMA will contact and recommend a course of action to the following:

1. Chairman – Laramie County Board of County Commissioners
 - a. Laramie County Public Works
2. Mayor – City of Cheyenne
 - a. City of Cheyenne Public Works
3. State of Wyoming
 - a. Wyoming Office of Homeland Security
4. Laramie County School District 1

Media Notification

When a closure or advisory is decided, EMA will send out notification and details of the decision using the Emergency Notification System. This will also send the notification messages to the Public Information Officer group that includes representatives from the various City and County agencies.

Emergency Snow Plan Zone (1) – All Day Closure/Delay/Early Release

Emergency Snow Plan Zone (2) – Closure/Delay/Early Release

Emergency Snow Plan Zone (3) – Closure/Delay/Early Release

Each jurisdiction is responsible for implementation of their individual snow plan. Agencies should pre-designate essential vs. non-essential personnel and determine what level of continuity their departments/agencies will operate under.

Level of Closure Description

Laramie County is divided into three (3) areas closing in on the City of Cheyenne (see map). Closure/Delay/Early Release are determined by road and weather conditions affecting the area. Area 3 is furthest away from Cheyenne and is divided into 2 parts, East and West, separated by I-25. Next is Area 2 followed by Area 1 which is within the city limits of Cheyenne. Area 1 is consistent with the boundary closures of LCSD # 1.

As severe weather approaches and conditions worsen, a Level 3 **Advisory** may be placed into effect. People living in Area 3 (East, West or both) will be advised to go home and prepare to shelter the storm. Any persons working in Area 3 are advised to move to their homes or shelter closer to interior areas. As conditions deteriorate an **Advisory** for Level 2 and Closure for Level 1 would follow.

Significant Weather Event Response Guidelines

On rare occasions, the county has a significant amount of snow and blizzard conditions, which cause major concerns for plowing capabilities, and the response efforts of First Responders for 911 calls. In the event this occurs, the following steps will take place to help alleviate double efforts and coordinate response assets throughout the City and County.

1. A virtual or in person Unified Command for Public Safety Response will be established by CLCEMA to assist with response and coordination needs. This decision will be based on a review of each storm situation and with recommendations from agencies listed below. CLCEMA will establish the most effective virtual platform for Unified Command and/or assist with determining location of Command Post. Agencies to be included may be:
 - a. Dispatch – Both LCCCC & HPD
 - b. Police, Sheriff, & Highway Patrol
 - c. All Fire Agencies Effectuated within the County
 - d. EMS – AMR, Pine Bluffs, & Burns
 - e. Public Works – City, County, & State
 - f. EMA Volunteer Teams – If needed
 - g. Local Utilities
2. If needed, ICS position specific personnel will be identified to coordinate with EOC representatives for additional requests and planning needs.
3. The Snow Team will act as the virtual Emergency Operations Center for large-scale decision-making and additional asset requests such as State/Military and NGO support.

Plan Maintenance

It is the responsibility of EMA to annually review and update this plan. Changes in other plans from different agencies should be forwarded to the EMA office for dissemination.

Cheyenne/Laramie County ERP – Support Annexes

Introduction

The Support Annex Assistance Guide outlines specific tasks or functions that may be carried out during and after an emergency or a disaster. The guide describes, in specific detail, the operational system identified in the Cheyenne/Laramie County Emergency Response Plan that will be used to carry out the functions listed. It should be based on the Incident Command structure described in the Base Plan.

These annexes are designed to be the major support system for the EOC. These annexes play an important part in the needs of the affected jurisdiction to provide logistics, finance, documentation, and provide an overview of the incident.

Support Annex 1 - Financial Management

Purpose

This annex provides basic financial management guidance to jurisdictions within Laramie County that respond to a major disaster or emergencies. Its intent is to ensure funds are provided expeditiously and financial operations are conducted in accordance with established law; County, state and federal policies; regulations; and standards.

Scope

The scope of this annex is applicable to all agencies and political subdivisions that may apply and/or receive state disaster assistance or emergency/disaster relief funding with, or through, Laramie County.

Concept of Operations

Financial operations will be carried out under extreme emergency/disaster schedules and political pressures, necessitating timely, non-routine procedures with sound financial management practices and accountability.

The City/County Clerk serves as the senior fiscal official during the emergency response phase and recovery. The Fiscal Director will direct the disposition and accounting of funds. They will be responsible for keeping the CEO and the Emergency Council informed on the status of all funds and current financial issues. That individual will have sufficient delegated authority to respond quickly to financial problems and coordinate financial issues.

All local (county or city) agencies should keep strict accounting of their expenditures during a disaster. They must maintain records, receipts, and documents to support claims, purchases, reimbursements and disbursements and provide such information immediately to the Fiscal Director upon request.

Timely financial support of the extensive response activities will be crucial to success in saving lives and property. Innovative and expeditious means may be employed to achieve the financial operational support objectives, however, it is mandatory that generally accepted financial policies, principles, and regulations be employed in order to ensure against fraud, waste, abuse, and to achieve the proper control and correct use of public funds.

The standard financial management policies and regulations, which apply to each local and county agency and department, should also be used in responding to disasters. The Clerk will coordinate financial aspects of an emergency or disaster; however, each local agency or department is responsible for providing its own financial management and support to its response operations in the field. Funds to cover eligible costs for response activities will be provided through reimbursement.

Each local agency and department is responsible for establishing affective administrative controls of funds and segregation of duties for proper internal controls. A responsible official of each should be designated to ensure that actions taken and costs incurred are consistent with missions.

Special care must be taken throughout the emergency response period to maintain logs, formal records, and file copies of all expenditures in order to provide clear and reasonable accountability

and justification for reimbursement. This will be necessary to facilitate the final closeout and support audits of financial records after the emergency phase.

In the event that an incident is related to a release of hazardous materials, the effected jurisdiction may take necessary action against the responsible party to collect reimbursement of costs on behalf of local and county agencies. Reimbursement of local government costs will be predicated upon reasonable fees for services rendered.

All jurisdictions should, therefore, be aware that EMA will continue to assist them in obtaining the necessary resources to mitigate emergency and disaster events when situations exceed their local capabilities. The role of Emergency Management will continue to be one of coordination and will not replace the authority or responsibility of local officials to exercise control over emergency or disaster events. Funding mechanisms exist at both the local and the County level to deal with financial requirements of mitigating these events. Typically, financial responsibility for operations in a jurisdiction is the obligation of the impacted local government, unless other arrangements are detailed ahead of time. Each emergency and disaster event is different, and thus possible reimbursement of related expenses will have to be evaluated on a case-by case basis.

Responsibilities

1. Fiscal Director:
 - a. Ensure that all financial records are maintained throughout the event or disaster.
 - b. Ensure that all on-duty time is recorded for each person staffing the Operational Area of the EOC.
 - c. Ensure that all on-duty time sheets are collected from Field Level Supervisors or Incident Commanders and their staff, who are assigned in the county unincorporated and contract areas.
 - d. Ensure that there is a continuum of the payroll process for all government employees responding to the event or disaster.
 - e. Determine purchase order limits for the procurement function in Logistics.
 - f. Ensure that workers compensation claims, resulting from the response to the event or disaster by county employees, are processed within a reasonable time, given the nature of the situation.
 - g. Ensure that all travel and expense claims are processed within a reasonable time, given the nature of the situation.
 - h. Provide administrative support to the EOC Sections as required, in coordination with the Personnel Unit.
 - i. Activate units within the Finance/Administration Section as required; monitor section activities continuously and modify the organization as needed.
 - j. Ensure that all recovery documentation is accurately maintained during the response and submitted on the appropriate forms to Federal Emergency Management Agency (FEMA) and/or the Governor's Office and Wyoming Office of Homeland Security.
 - k. Supervise the Finance/Administration Section.
2. During the Activation Phase, the Fiscal Director will:
 - a. Follow the Generic Checklist located at the EOC.
 - b. Ensure that the Finance/Administration Section is set up properly and that appropriate personnel, equipment, and supplies are in place.
 - c. Based on the situation, activate units within the Section as needed.
 - d. Ensure that sufficient staff is available for a 24-hour schedule, or as required.

Cheyenne/Laramie County Emergency Operations Plan

- e. Ensure there is coordination with all activated ESF's within the Operational Area for the purpose of gathering and consolidating response cost estimates and other related information.
 - f. Meet with the Logistics Section Chief and review financial and administrative support requirements and procedures; determine the level of purchasing authority to be delegated to Logistics Section.
 - g. Meet with all Unit Leaders and ensure that Responsibilities are clearly understood.
 - h. In conjunction with Unit Leaders, determine the initial action planning objectives for the first operational period.
 - i. Notify the EOC Director when the Finance/Administration Section is operational.
 - j. Adopt a proactive attitude, thinking ahead and anticipating situations and problems before they occur.
3. During the Operational Phase, the Fiscal Director will:
- a. Ensure that Finance/Administration position logs and other necessary files are maintained.
 - b. Ensure that displays associated with the Finance/Administrative Section are current and that information is posted in a legible and concise manner.
 - c. Participate in all Action Planning meetings.
 - d. Brief all Unit Leaders and ensure they are aware of the EOC objectives as defined in the Action Plan.
 - e. Keep the EOC Director, General Staff, and the Emergency Council aware of the current fiscal situation and other related matters, on an on-going basis.
 - f. Ensure that the Recovery Unit maintains all financial records throughout the event or disaster.
 - g. Ensure that the Time Keeping Unit tracks and records all agency staff time.
 - h. In coordination with the Logistics Section, ensure that the Payables Unit processes purchase orders and develops contracts in a timely manner.
 - i. Ensure that the Compensation & Claims Unit processes all workers' compensation claims resulting from the disaster, in a reasonable time frame, given the nature of the situation.
 - j. Ensure that the Time Keeping Unit processes all time sheets and travel/expense claims promptly through budget and payroll office.
 - k. Ensure that the Finance/Administration Section provides administrative support to other EOC Sections as required.
 - l. Ensure that all recovery documentation is accurately maintained by the Recovery Unit during the response, and submitted on the appropriate forms to the Federal Emergency Management Agency (FEMA) and/or the Governor's Office of Emergency Services.
 - m. Ensure that the briefing for Section staff upon arrival includes information on the demands and what they might confront during their shift.

Support Annex 2 - Logistics

Introduction

The Logistics Management Support Annex describes the framework within which the overall logistics management function operates for Incidents of Significance and describes how Laramie County disaster resources fit into this framework. It also describes how Life Lines and Emergency Support Functions (ESF's) interact to provide support to the affected population as well as support to the incident management effort.

Purpose

The Logistics Management Support Annex:

1. Describes the ERP logistics management and delivery organizations;
2. Provides an overview of operations for executing logistics management in support of an Incident of Significance; and
3. Outlines Laramie County logistics management responsibilities in support of county and local logistics providers during major events.

Scope

The Logistics Management Support Annex identifies the components of the Laramie County logistics delivery structure and provides a concept of operations for logistics management in support of the ERP. It also outlines how the various logistics agencies interact with Emergency Management during an Incident of Significance.

Definition

Logistics management is the process of planning, preparing, implementing, and evaluating all logistics functions that support an operation or activity. Logistics management function is an element of ESF #5 (Information and Planning) and ESF #7 (Logistics). If the Incident requires logistics, any or all of the ESFs may be activated.

Effective logistics management contributes to mission success while ensuring all functions are executed in a unified manner to reduce costs, ensure appropriate support actions, and increase response capability. Individual logistics functions and associated sub-functions include:

- **Material Management**: Material management includes: requirements processing (requisitioning and sourcing), acquisition, asset visibility (resource tracking), receipt, storage, handling, material security, accountability, inventory, deployment, issue, distribution, recovery, reuse and disposition.
- **Property Management (Personal Property)**: Accountability, inventory, disposal, and record processing.
- **Facility Management**: Facility selection and acquisition, building services, information systems, telecommunications and information technology, safety, public health and medical services, and physical security.
- **Transportation Management**: Transportation prioritizing, ordering, sourcing, and acquisition; time-phasing plans; fleet management; and movement coordination and tracking.

Policies

Material Management

Logistics personnel find appropriate, time-sensitive, and cost-effective ways to fill the materiel requirements developed by operations personnel. Equipment and supplies are provided from current Mutual-Aid Agreements, Memorandums of Understanding, or, if necessary, from commercial sources.

The affected City/County provide a central procurement authority for City/County Government. All procurement actions are made in accordance with internal financial rules and regulations.

When activated, ESF #7 serves as the point of contact for requesting materials in support of the ERP. ESF #7 is responsible for coordinating with internal and external sources to obtain the resources required in the most cost-efficient and expeditious fashion.

ESF #7 operates under the direction of County Commissioners or CEO of the effected jurisdiction, City/County Clerk, and City/County Treasurer.

Personal Property Management

All agencies and departments acting within the scope of Disaster Relief and/or Emergency Assistance will account for personal property in accordance with their agency property management policies.

If other non-county property is used for incident management operations and this property is lost, damaged, stolen, or consumed, the agency who owned the equipment will be reimbursed for the cost of such property if a federal disaster is declared and the required documentation is provided to the jurisdiction.

The City/County Clerk directs the disposition of all property owned, including items held by organizations that intend to request reimbursement for said property.

Facility Management

All facilities and related support necessary for operations is sourced through the following ESFs:

1. ESF #7 (when activated and requested to do so) supports the requirements for obtaining local facilities, facility setup, space management, building services, and general facility operations.
2. ESF #3 (when activated and requested to do so) provides operational support at the mobilization centers, staging areas, and distribution sites for all infrastructure and engineering service commodities (supplies and equipment) required to support missions.
3. ESF #2 (when activated and requested to do so) supports emergency telecommunications and information technology services for local elements during an Incident of Significance.
4. ESF #8 (when activated and requested to do so) supports public health and medical services for local elements during an Incident of Significance.

Transportation Management

ESF #1 serves as the point of contact for requesting transportation assistance in support of agencies under the ERP. Other ESF representatives coordinate transportation requirements with ESF #1 representatives. ESF #1 determines the best mode and source of transportation. Refer to ESF #1 for more details.

Concept of Operations

Logistical Response Operations

The structure for logistics depends on the partners that provide resources to support incident-related operations. Logistics support is provided for protection, preparedness, response, recovery, and mitigation actions during all phases of incident management.

1. Initial Actions
 - a. ESF's are activated and response personnel go to the EOC.
 - b. Logistics personnel assigned to EOC perform the following functions:
 - c. Participate, with operations and other contingency staffs, in coordination and decision-making meetings;
 - d. Translate operations-generated requirements into contingency specific logistics plans for leadership approval;
 - e. Establish communications and coordination among logistics partners to locate any necessary centers;
 - f. May provide asset tracking; and
 - g. Analyze requests for resources to determine cost effective and timely means to meet requirements.
2. Ongoing Actions
 - a. Logistics personnel transition into logistics management activities. They execute logistics functions as follows:
 - b. Materials Management provides supplies and equipment to the incident(s). This logistical function works with ESFs #6 and #8 to provide non-specialized mass care and medical supplies, as well as with other ESFs to provide commercially available supplies and equipment. The goal is to provide supplies and equipment at the location and in the quantities required in the timeliest and cost-effective manner.
 - c. Property Management accounts for personal property at all operational levels. Laramie County or the affected jurisdiction retains title to accountable property unless it is transferred to other jurisdictions. Several agencies have the capability to establish receiving and distribution operations at the mobilization centers and support property management teams by maintaining property accountability on items stored at or issued from these locations.
 - d. Emergency communications and information technology support is provided to support the National Communication System via ESF # 2.
3. Demobilization
 - a. As response operations begin to diminish, EOC will demobilize the ESFs from their respective operations.
 - b. The Logistics Sections may remain active for several days following demobilization for the following closeout activities:

- c. Coordinating and conducting activities associated with retrieving (or disposing locally if no longer serviceable), refurbishing and restocking all city/county assets used during the disaster operation;
- d. Ensuring that all equipment and supplies are accounted for in accordance with appropriate regulations; and
- e. Participating in internal and external after-action reviews.

Resources Fulfillment Cycle

This section of the Annex addresses the overall methodology used to anticipate and subsequently fulfill requirements of victims during Incidents of Significance.

1. Overview
 - a. The Logistics Section will follow ICS and NIMS to decide where to locate supplies, equipment or personnel closer or further from the Incident.
2. Process
 - a. The ordering, sourcing, transportation, issuing, and movement of City/County resources will generally follow the procedural steps outlined below:
 - b. Resources needed to provide relief to victims of an Incident of Significance are identified. This can be a type of supply, equipment, or a service.
 - c. The local jurisdiction tries to fill the need from existing resources. If they do not have the resource, they pass the requirement on to the EOC.
 - d. If the EOC cannot fulfill the resource needs, the State receives the requirement, the State attempts to fulfill the need.
 - e. The Operations Section determines if the resource is available in staging areas to fulfill the requirement. If the resource is not available, the requirement will be passed through ESF #5 to the Logistics Section at the EOC.
 - i. The Logistics Section Chief has several options available to fill the requirements:
 1. Fill the requirement from current resources.
 2. Fill the requirement by asking for State resources.
 3. Procure the goods or services through commercial sources.
 4. Once the source is identified, the resource is delivered to the location specified by the Logistics Section Chief. The Logistics Section Chief is responsible for all transfer of goods to jurisdiction control. This may occur at the following locations:
 - a. Incident Command Post
 - b. Logistical Base
 - c. The staging area.
 - d. Distribution point.
 - e. Directly where the resource is needed.
 - i. If the resource was filled from existing County or local jurisdiction resources, replenishment activities begin immediately to replace the resource upon the recommendation of the County Commissioners.

Responsibilities

The primary agency responsible for Logistical Management at the EOC is Cheyenne/Laramie County Emergency Management Agency. The ESFs are responsible for supporting the EOC and the needs of Logistical Management.

Support Annex 3 - Public Affairs

Purpose

The purpose of this annex is to outline the means, organization, and process by which we will provide appropriate information and instructions to the public and media during emergency situations. This annex also provides for public education to be conducted in advance of emergency situations to reduce the likelihood that citizens will place themselves in hazardous situations that may require an emergency response.

General

Pursuant to the National Incident Management System (NIMS) operating principles and protocols, public information efforts should generally focus on specific event-related information. This information will generally be of an instructional nature focusing on such things as warning, evacuation, and shelter. Appendix 2 describes some basic emergency information needs.

A special effort should be made to keep the public informed of the general progress of events. Reporting positive information regarding emergency response will help to reassure the community that the situation is under control. Rumor control must be a major aspect of the informational program. Public feedback should be used as a measure of the program's effectiveness.

Education efforts are to be directed toward increasing public awareness about potential hazards and how people should prepare for them. All information and education efforts will rely heavily on the cooperation of every type of media organization.

Information Dissemination

In the initial stages of an emergency situation, the Laramie County Communications Center may have to take action on time-sensitive hazards. Within the limits of the authority delegated to it, the Incident Commander will determine if a warning needs to be issued and disseminate it through the Public Information Officer (PIO). Pre-scripted emergency messages have been prepared for likely hazards and are included in the "Warning" section of the Base Plan. A list of these messages is provided in Appendix 5. These pre-scripted messages may be used as written or tailored as needed for specific circumstances.

As the Emergency Alert System (EAS) messages are limited to two minutes, EAS warning messages may have to be supplemented with Special News Advisories prepared by the PIO staff that contains amplifying emergency information. Special News Advisories are generally disseminated to media outlets by fax. Copies of the pre-scripted messages, which include warning messages and Special News Advisories, should be maintained on computers at the Office of Homeland Security and in the EOC so that they can be modified quickly.

Broadcasters and cable companies must carry national security warnings and messages initiated by the President; they may broadcast alerts and messages initiated by state and local governments. The Federal Communications Commission encourages licensees to broadcast local warning and instruction messages, but the final decision on broadcasting such messages rests with the broadcasters. Broadcasters and cable operators will expect EAS to be used for life-threatening emergencies.

When the Incident Command System is activated for an emergency situation, the Incident Commander will normally warn the public in and around the incident site. A designated PIO at the Incident Command Post (ICP), assisted by the County/City (depending on location of incident) PIO staff if necessary, will normally provide information on the emergency situation to the media if the EOC has not been activated. All information relayed to the media by the PIO will be approved by the IC and the EOC/CEO (depending on location of incident), regardless of the command structure – single or unified.

Once the EOC has been activated for an emergency situation, the EOC Manager will normally determine the need for additional warning and instructions. The PIO staff will disseminate Special News Advisories and other emergency public information materials to the media directly using its contact list.

In the case of large-scale emergencies or disasters where there are substantial external responders from other jurisdictions and/or state or federal agencies and the response and recovery effort may continue for an extended period, a Joint Information Center (JIC) may be established. The JIC, an element of the Joint Information System (JIS) developed to provide information to the public during an emergency, is a working facility where the emergency public efforts of all participating jurisdictions, agencies, volunteer organizations, and other responders can be coordinated to ensure consistency and accuracy. In federally declared incidents, a JIC will typically be set up as part of the Joint Field Office (JFO).

The following means will be used to provide emergency information and instructions to the public, if available:

- EAS broadcasts by radio, television, and cable companies.
- CodeRed/IPAWS Emergency Notification.
- Special news broadcasts by radio, television, and cable companies.
- Local newspapers.
- Telephone warning/information system.
- Mobile police/sheriff units with public address systems.
- Recorded information on available information hotlines.
- The local government Internet site.
- Other

Providing Emergency Information to Special Populations

Special populations will be provided information on emergency situations and appropriate instructions by the following methods:

- **Visually-impaired**: EAS messages and news advisories on radio, NOAA Weather Radio, or by door-to-door notification
- **Hearing-impaired**: Captioned EAS messages and news advisories on television, print media
- **Non-English Speakers**: Announcements in Spanish on radio, TV, or cable language newscasts, public address systems, door-to-door, etc...

Resources

The PIO shall maintain a Media Roster that contains the names, telephone and facsimile numbers, and E-mail addresses of each of the media resources listed below.

- Broadcast Television
- Cable Television
- Radio
- Newspapers

Phases of Management

1. Mitigation
 - a. Conduct hazard awareness programs.
 - b. Develop systems to enhance information dissemination during emergency situations.
2. Preparedness
 - a. Develop and distribute educational materials; conduct public education programs.
 - b. In coordination with the IC/EOC, prepare pre-scripted warning and public instruction messages for known hazards.
 - c. Brief local media on local warning systems and coordinate procedures for transmitting emergency information to media.
 - d. Conduct public education on warning systems and the actions that should be taken for various types of warnings.
 - e. Train public information staff.
 - f. Brief local officials and emergency responders on working with the media.
 - g. Maintain this annex.
 - h. Identify suitable facilities for a Joint Information Center.
3. Response
 - a. Develop, obtain authorization, and release public information on the emergency situation.
 - b. Conduct media monitoring to determine the need to clarify issues and distribute updated public instructions.
 - c. Manage rumor control.
 - d. Conduct news conferences and arrange interviews as needed.
4. Recovery
 - a. Provide public information relating to recovery process and programs.
 - b. Compile record of events.
 - c. Assess effectiveness of public information and education program.

Organization and Assignment of Responsibilities

General

The overall responsibility for providing emergency information and instructions to the public rests with the CEO and/or IC/UC depending on the situation. The CEO shall provide general guidance for Public Information (PI) programs and appoint a Public Information Officer (PIO) in connection with the IC/UC.

The PIO will manage and coordinate all emergency public information related activities and direct such staff as may be assigned or recruited to assist in those activities. Trained public information specialists will staff PIO positions at the Incident Command Post (if requested) and in the EOC.

Task Assignments

1. The Chief Elected Official will:
 - a. Appoint a Public Information Officer (PIO).
 - b. Ensure that the jurisdiction has implemented and institutionalized processes and procedures to coordinate and integrate public information functions including the development of a public education program for emergency situations.
 - c. Work with IC/UC to authorize release of all approved incident information to the media.
 - d. Ensure that a Joint Information Center (JIC) is activated when warranted by the incident.
2. The Public Information Officer (PIO) will:
 - a. Represent and advise the IC on all public information matters relating to the management of the incident.
 - b. Ensure the IC approves the release of all incident-related information.
 - c. Coordinate and integrate public information functions across jurisdictions and functional agencies as required.
 - d. Develop accurate and complete information on the incident for both internal and external consumption.
 - e. Coordinate the overall emergency public information efforts of local government.
 - f. Serve as the official County/City representative in the JIC.
 - g. Conduct public education programs as an ongoing activity.
 - h. Develop and disseminate public information materials and maintain a stock of materials for emergency use based on hazards likely to confront the jurisdiction. Such materials should include:
 - i. General materials dealing with the nature of hazards and basic protective actions to take in the event of an emergency, including shelter-in-place and evacuation.
 - ii. Hazard specific instructions on “where to go and what to do” in an emergency.
 - iii. Information on how emergency warnings are disseminated and the meaning of warning signals.
 - i. Develop methods (i.e., newspaper supplements, prepared TV/radio scripts for broadcast stations) for distribution of information materials to the public, to include materials for non-English speaking groups, if appropriate.
 - j. In cooperation with the CEO, coordinate with broadcasters (radio and television stations and cable television companies) to develop procedures for local government to disseminate warning messages and emergency information through the broadcast media.
 - k. Authenticate sources of information, verify for accuracy, and obtain authorization before issuing news releases.
 - l. Provide authorized news releases to the media while keeping the CEO, Mayors and Commissioners informed of message content.
 - m. Monitor media coverage of emergency operations for accuracy of reports and issue corrections where necessary.
 - n. Take action to control rumors.

Cheyenne/Laramie County Emergency Operations Plan

- o. Brief potential Incident Commanders, department heads and key staff, and the EOC staff on basic public information needs, working with the media, and media access during emergency operations.
 - p. Maintain a media briefing area [in/in the vicinity] of the EOC.
 - q. Periodically brief the media on local warning systems and warning procedures.
 - r. Maintain a Media Contact Roster. See Appendix 1 for a sample.
 - s. Compile printed and photographic documentation of the emergency/disaster.
 - t. Develop public information emergency checklists for known hazards. See Appendix 6.
 - u. Anticipate and be prepared to handle unscheduled inquiries from the media and the public.
 - v. Train a group of government employees and/or volunteers to staff PIO positions at the Incident Command Post, if requested, and in the EOC.
3. All local government departments and agencies will:
- a. Refer media inquiries during emergency situations to the PIO.
 - b. Assist the PIO in responding to requests for information from the public or the media.
4. Media companies are expected to:
- a. Disseminate warning messages and special news advisories provided by local government to the public as rapidly as possible.
 - b. Participate in periodic tests of the EAS and other warning systems.
 - c. Provide coverage of emergency management activities.
 - d. Work with PIO on public educational programs relating to emergencies.
 - e. Check accuracy of information on emergency operations with the PIO.

Direction and Control

General

The CEO has the overall responsibility for the emergency public information program for their jurisdiction, and shall provide general guidance for emergency-related public education and information activities, shall appoint a PIO, and in conjunction with the IC, approve all information released to the news media.

The PIO shall direct all emergency public information activities, coordinating as necessary with other individuals, departments, and agencies performing other emergency functions.

To the extent possible, the PIO shall release, upon approval, all information to the public and the media during emergency operations. During emergency operations, departments and agencies shall refer media inquiries to the PIO.

Line of Succession

The line of succession for the Public Information Officer is:

1. Affected jurisdiction designated PIO
2. Laramie County Sheriff's Department PIO
3. Chief Elected Official

Readiness Level

1. Readiness Level 4 - Normal Conditions
2. Readiness Level 3 - Increased Readiness
 - a. Monitor the situation.
 - b. Check and update Media Contact Roster.
 - c. Alert media of the increased threat so they are aware of the situation and are prepared to disseminate warnings and public instructions if necessary.
3. Readiness Level 2 - High Readiness
 - a. Monitor the situation.
 - b. Review pre-scripted warning messages and public instruction messages; draft updated versions or additional messages tailored for the impending threat.
 - c. Alert personnel for possible emergency operations; identify personnel for increased staffing during primary vulnerability period.
 - d. Determine requirements for additional pre-emergency public information and instructions and produce and disseminate those materials.
 - e. Consider placing public information personnel on shifts to provide for increased situation monitoring and to conduct additional public information planning.
4. Readiness Level 1 - Maximum Readiness
 - a. Monitor the situation.
 - b. Update warning messages as necessary.
 - c. Update public information materials based on current threat and disseminate.
 - d. Provide information to the media on local readiness activities.
 - e. Place selected off-duty personnel on standby to increase staffing if necessary.
 - f. Staff public information positions in the EOC or at the ICP when activated.

PIO Duties

1. Media Contact Roster
 - a. The PIO shall maintain a contact roster for the media organizations that are involved in local emergency management programs.
2. Records
 - a. The PIO shall maintain a file of all news advisories and press releases issued during emergency operations.
 - b. The PIO shall also compile and maintain copies of newspaper articles, videotapes of emergency operations and news broadcasts relating to an emergency, and other media materials distributed for use in post-incident analysis and future training activities.
3. Training
 - a. Members of the public information staff for whom public information is not their primary daily work should attend public information training, preferably training focusing on emergency public information activities.

Annex Development & Maintenance

Development

The County Public Information Officer is responsible for developing and maintaining this annex.

Maintenance

This annex will be reviewed annually and updated in accordance with the schedule outlined in the Base Plan.

Operating Procedures

The Public Information Officer is responsible for developing and maintaining SOPs covering recurring public information tasks.

Appendices:

- Appendix 1 Media Contact Roster
- Appendix 2 Public Information Needs
- Appendix 3 Working with the Media
- Appendix 4 Media Access & Identification

- vi. E-mail Address

b. Name:

- vii. Address:
- viii. Distribution Area:
- ix. Contact Name:
- x. Telephone Number
- xi. Fax Number:
- xii. E-mail Address

Appendix 2 – Public Information Needs

Background

During emergency situations, it is important to provide the general public with adequate information on the situation as rapidly as possible to alleviate concerns and reduce the likelihood of panic or inappropriate actions. The news media are the primary means of disseminating such information by providing up-to-date information quickly to a wide audience. The information they provide reduces the time and manpower that local government would have to divert from response and recovery tasks to deal with (which could be an overwhelming number of inquiries from the public). Every effort should be made to cooperate with the news media in providing information and in recognition of the rights of the news media to perform their proper function.

Information Needs

The following types of information shall be provided to the public as soon as possible in as much detail as possible.

1. What Happened
 - a. Nature of incident or emergency
 - b. Location
 - c. Time of occurrence
 - d. Situation resolved or response on-going
 - e. Cause (Until an investigation has determined the cause with reasonable certainty, it is not advisable to speculate.)
2. Current Response Actions
 - a. What actions have been or are being taken to protect public health and safety and public and private property?
3. Known Damages
 - a. Homes
 - b. Businesses
 - c. Government buildings
 - d. Infrastructure – roads, bridges, parks, etc.
4. Casualties
 - a. Number dead and apparent cause
 - b. Number of injured and nature/severity of injuries and where they are being treated
 - c. Number missing and circumstances
 - d. General identification of casualties – age, sex, situation (employee, homeowner, responder, etc.)
 - e. Names of casualties – only released after next of kin have been notified
5. Evacuations
 - a. Areas and facilities evacuated
 - b. Approximate number of evacuees
6. Shelter & Mass Care
 - a. Shelters open – name and location
 - b. Approximate number of persons being housed in shelters
 - c. Mass feeding site or other mass care facilities in operation – name, location, and number of persons being served.

7. Status of Utilities
 - a. Electric service
 - b. Telephone system
 - c. Water system
 - d. Sewer system
 - e. Natural gas distribution
8. Road and Facility Closures
9. Organizations Responding
 - a. Local government
 - b. State agencies
 - c. Federal agencies
 - d. Volunteer groups
10. Means of contacting evacuees
11. Areas to which access is restricted and the reason(s) for such restriction
12. For ongoing emergency situations, planned response activities
13. In the recovery phase:
 - a. Disaster assistance programs available
 - b. How to apply for disaster assistance

Collection and Dissemination of Information

Information shall be collected and disseminated as soon as possible by the appropriate personnel. All incident related information must be approved by the IC prior to dissemination. The PIO is responsible for collection of information from the Incident Commander, the EOC staff, and other sources and agencies. The PIO staff is responsible for preparation of news releases, for the dissemination of information directly to the news media, and, where appropriate, for making arrangements for announcements directly to the public via radio and/or television hookups.

Where an Incident Command Post has been established and a qualified public information staff member is at the scene, that individual may provide information directly to the media if the EOC is not activated. If no qualified public information staff member is present at the scene, the Incident Commander or a member of his staff should pass situation information to the Public Information Officer for release to the media. Where an Incident Command Post has been established and the EOC has been activated, information from the incident scene will normally be passed to the Public Information Officer at the EOC. The Public Information Officer will utilize reports from the scene and other available pertinent information to brief the media and prepare news advisories for release to the media.

The Shelter and Mass Care Officer is responsible for collecting information on shelter and mass care activities and providing that information to the PIO. The Energy and Utilities representative in the EOC is responsible for obtaining information on the status of utilities and providing it to the PIO. Law Enforcement and Public Works/Engineering are responsible for obtaining information on road closures and facility closures and providing it to the PIO.

Hospitals are responsible for dissemination of information concerning casualties and deaths. They generally have policies restricting the release of detailed information without permission of patients or their families. The information that they choose to release will normally be disseminated directly to the news media. The PIO should request that the EOC be provided copies of any information released to the media.

Appendix 3 – Working with the Media

What to do when working with the media:

1. Identify your spokesperson beforehand.
2. Have a number the media know to call when they need information.
3. Make certain the person answering the phones knows to whom to direct media calls.
4. Get all the information you can from those in charge before you talk with the media.
5. Write out the answers to these questions for **your** use:
 - a. What happened?
 - b. When did it happen?
 - c. Where did it happen?
 - d. Why did this happen?
 - e. Who's responsible, involved, injured?
 - f. How many were hurt or killed? What are their names/ages/addresses?
 - g. Can I shoot video/take photos? How close can I get?
 - h. Who can I talk to?
 - i. What is your agency doing about it?

When you talk with the media:

- Tell the truth and if related to the incident, ensure the IC has approved the information.
- Be courteous and don't play favorites.
- Avoid "off the record" remarks.
- Never say anything you would not want to see printed or broadcast.
- Stay on top of the interview by listening to the reporter's questions.
- Don't accept the reporter's definitions of what happened.
- Pause, think; ask for more time if you need it.
- Respond only to the question you've been asked. Don't speculate.
- Stick to the core message

Appendix 4 – Media Access & Identification

Media Access

In recognition of the public's right to know as much information as possible about a disaster, local response agencies will cooperate with legitimate news media representatives and provide equal access to information and, within the limits of safety and other response needs, access to incident scene to various news organizations. News media representatives are required to cooperate with response personnel as directed for safety and efficient operation.

The Incident Commander or his designated representative will allow media such access to the incident scene as is consistent with safety and does not disrupt critical operations.

The CLCEMA, in coordination with the PIO, shall establish rules for media access to the EOC. When the EOC is activated, representatives of news media may be provided access to those areas of the EOC designated by CLCEMA. As a general rule, press briefings will not be conducted in the EOC because they can disrupt on-going EOC operations; briefings will normally be conducted in the press area. Photo shoots and interviews may be conducted in the EOC, but these should be scheduled so as to minimize disruption.

Hospitals establish their own rules of access for news media representatives and these may vary for individual circumstances. For emergency situations where there have been substantial casualties, it may be desirable for hospitals to provide a pressroom or other designated area with access to telephones for the use of news media representatives.

When incident scenes are on private property, the property owner may establish and enforce policies with regard to access by the media and other persons who are not emergency responders.

Media Identification

Representatives of news media will be considered to have satisfactory identification if they have:

- A media company identification card with photo that identifies them as a media representative, unless there is reason to believe that the identification is not genuine.
- Show a press identification card.

Appendix 5 – List of Pre-Scripted Emergency Messages

The following pre-scripted emergency messages have been prepared and are included under **TAB D**:

- Warning – General Incident
- Warning – Road/Facility Closure
- Warning – Shelter-in-Place
- Special News Advisory – Pre-Evacuation
- Weather Warning – Blizzard or Extreme Cold
- Weather Warning – Tornado
- Weather Warning - Severe Thunderstorm
- Warning – Urgent Evacuation
- Warning – Deliberate Evacuation
- School Advisory – Evacuation Information
- Water Warning – Break in Water Line

Appendix 6 – Public Information Checklists

This appendix includes the following Emergency Public Information (PI) Checklists:

- Tab A: Public Information Checklist for Flooding
- Tab B: Public Information Checklist for Hazmat Incidents
- Tab C: Public Information Checklist for Tornadoes
- Tab D: Pre-Scripted Emergency Messages

Tab A: Public Information Checklist for Flooding

Note: This public information checklist is designed for slowly developing floods. For a fast-breaking flood situation, it may not be feasible to conduct some of the readiness activities listed.

✓	Pre-Emergency Phase
	1. Conduct public education and distribute preparedness materials highlighting local flood risk areas, precautionary actions, and protective actions.
	2. In coordination with the EMA/EOC, maintain a set of pre-scripted warning and public instructions messages ready for use. See Annex A to the Base Plan.
	3. Coordinate with school authorities/PIOs on policies/procedures for announcing school closures.
	4. Review local Hazard Analysis and Base Plan to identify potential flood risk areas and evacuation routes.
	5. Coordinate with Animal Control, Animal Shelter, and other organizations to determine availability of facilities for evacuated pets and large animals.
	6. Coordinate with PIOs from local response agencies and volunteer groups and develop an effective PIO-to-PIO communication system.
✓	Readiness Phase
	1. Ensure PIO receives current information on flood watches & warnings.
	2. Coordinate with the Shelter and Mass Care Officer to determine likely shelter sites.
	3. Coordinate with Law Enforcement to determine planned/likely evacuation routes.
	4. In coordination with EMA, update precautionary action and evacuation message(s).
	5. Develop maps of likely evacuation areas and evacuation routes that can be provided to the media.
	6. Disseminate property protection and evacuation preparedness information to public through media.

Cheyenne/Laramie County Emergency Operations Plan

✓	Emergency Response Phase
	1. Provide evacuation area and evacuation route maps to media.
	2. Release evacuation recommendation through warning system.
	3. Release information on how transportation will be provided for those who lack it.
	4. Release public instructions on securing property, evacuation routes, and what to take with you.
	5. Release information to media on shelter and mass care facilities available.
	6. Release information to media on where persons needing assistance should call.
	7. Release special instructions for those evacuating pets.
	8. Release information on curfews and travel restrictions in effect within evacuation areas.
	9. Release information on disaster welfare inquiry procedures.
	10. Advise the public not to return to the evacuation area until told to do so.
	11. Inform media of emergency response actions and organizations participating.
✓	Post-Emergency Phase
	1. Coordinate with Law Enforcement to obtain information on routes for return of evacuees and areas where reentry is restricted due to damage.
	2. Coordinate with CEO to obtain and release damage assessments to media, updating as additional information becomes available.
	3. Release information to media on return of evacuees and preferred reentry routes, if any.
	4. Release information to media on access controls for damaged areas, if any.
	5. Provide public information on safety precautions for entering damaged buildings and the need to document damage and contact insurance companies.
	6. Release information on disaster relief/recovery programs and facilities.
	7. Release information to media on termination of shelter operations
	8. Release information on debris removal activities.
	9. Release information on volunteer assistance for home cleanup and repair.

Cheyenne/Laramie County Emergency Operations Plan

Tab B: Public Information Checklist for Hazmat Incidents

Note: As most Hazmat incidents occur without significant warning, it may not be feasible to conduct some of the activities listed in the Readiness Phase.

✓	Pre-Emergency Phase
	1. Review local Hazard Analysis and Annex E, to obtain information on potential Hazmat risk areas and evacuation routes.
	2. Conduct public education and distribute preparedness materials highlighting local Hazmat risk areas, precautionary actions, and protective actions.
	3. In coordination with the EMA, maintain a set of pre-scripted warning and public instructions messages ready for use.
	4. Coordinate with school authorities, other PIOs, and local media on policies/procedures for announcing school closures or evacuations.
	5. Coordinate with special facilities or special needs populations and local media on policies/procedures for announcing closures or evacuations.
	6. Coordinate with PIOs from local response agencies and volunteer groups and develop an effective PIO-to-PIO communication system.
	7. Coordinate with local media to insure thorough understanding of Hazmat response operations and protective actions such as shelter-in-place and evacuation.
	8. Disseminate evacuation preparedness information to the public.
✓	Readiness Phase
	1. Insure PIO receives current information on potential Hazmat incidents.
	2. Coordinate with the Shelter and Mass Care Officer to determine likely shelter sites.
	3. Coordinate with Law Enforcement to determine planned/likely evacuation routes.
	4. In coordination with the EMA, update precautionary action and evacuation message(s).
	5. Develop maps of likely evacuation areas and evacuation routes that can be provided to the media.

Cheyenne/Laramie County Emergency Operations Plan

✓	Emergency Response Phase
	1. Provide information to the media and public about the incident to include information on the nature of the incident, the expected duration of the incident, instructions to the community on evacuation or shelter in place procedures, symptoms of contamination, and potential health-risks.
	2. Disseminate property protection and evacuation preparedness information to public through the media.
	3. <i>Shelter in Place Actions</i>
	a. Release shelter in place recommendation through the media.
	b. Provide shelter in place instructions to the media.
	c. Provide maps of geographic area that will shelter in place.
	4. <i>Evacuation Actions</i>
	a. Release evacuation recommendation through media.
	b. Provide evacuation area and evacuation route maps to media.
	c. Release information on how transportation will be provided for those who lack it.
	d. Release public instructions on securing property, property protection, and what to take with you.
	e. Release information to media on shelter and mass care facilities available.
	f. Release special instructions for those evacuating pets, and insure that you have the information on which shelters will accept pets or available sheltering facilities for animals.
	5. <i>General Actions</i>
	a. Release information to media on where persons needing assistance should call.
	b. Release information on curfews and travel restrictions in effect within evacuation areas.
	c. Release information on disaster welfare inquiry procedures
	d. Advise the public not to return to the evacuation/shelter in place area until told to do so by the proper authorities.
	e. Inform media of emergency response actions and organizations participating.

Cheyenne/Laramie County Emergency Operations Plan

✓	Post-Emergency Phase
	1. Coordinate with law enforcement to obtain information on routes for return of evacuees and areas where reentry is restricted due to damage.
	2. Coordinate with CEO to obtain and release damage/contamination assessments to media, and update them as additional information becomes available.
	3. Release information to media on return of evacuees and preferred reentry routes, if any
	4. Release information to media on access controls for damaged areas, if any.
	5. Provide public information on safety precautions for entering damaged areas and the need to document damage and contact insurance companies.
	6. Release information on disaster relief/recovery programs and facilities.
	7. Release information on termination of shelter operations.
	8. Release information on decontamination activities.
	9. Release information on volunteer assistance.
	10. Release information on clean-up/decontamination activities, if needed.
	11. Keep public and media informed of long-term clean-up activities, potential long-term health effects, liability information, and future mitigation efforts.

Tab C: Public Information Checklist for Tornadoes

✓	Pre-Emergency Phase
	1. Conduct public education and distribute preparedness materials highlighting local risk areas, precautionary actions, and protective actions.
	2. In coordination with the EMA, maintain a set of pre-scripted warning and public instructions messages ready for use.
	3. Coordinate with school authorities/PIOs on policies/procedures for announcing school closures.
	4. Review local Hazard Analysis in Base Plan, to identify potential tornado risk areas and evacuation routes.
	5. Disseminate information on the availability of facilities for evacuated pets and large animals.
	6. Coordinate with PIOs from local response agencies and volunteer groups and develop an effective PIO-to-PIO communication system.
	7. Disseminate information emphasizing the need for ride sharing during an evacuation.

Cheyenne/Laramie County Emergency Operations Plan

✓ Readiness Phase	
	1. Ensure PIO receives current information on hurricane watches & warning.
	2. Coordinate with the Shelter and Mass Care Officer to determine likely shelter sites that could be used during the recovery phase.
	3. Coordinate with Law Enforcement to determine planned/likely evacuation routes.
	4. In coordination with the EMA, update precautionary action and evacuation message(s).
	5. Develop maps of likely evacuation areas and evacuation routes that can be provided to the media.
	6. Disseminate property protection and evacuation preparedness information to public through media.
	7. Disseminate information to special need facilities and those in mobile home/trailer parks recommending an early precautionary evacuation.

✓ Emergency Response Phase	
	1. Provide evacuation area and evacuation route maps to media.
	2. Release evacuation recommendation through warning system.
	3. Release information on how transportation will be provided for those who lack it.
	4. Release public instructions on securing property, evacuation routes, and what to take with you.
	5. Release information to media on shelter and mass care facilities available.
	6. Release information to media on where persons needing assistance should call.
	7. Release special instructions for those evacuating pets.
	8. Release information on curfews and travel restrictions in effect within evacuation areas.
	9. Release information on disaster welfare inquiry procedures.
	10. Advise the public not to return to the evacuation area until told to do so.
	11. Inform media of emergency response actions and organizations participating.
	12. Release information on the availability of food service, gas stations, and medical facilities.

Cheyenne/Laramie County Emergency Operations Plan

✓	Post-Emergency Phase
	1. Coordinate with Law Enforcement to obtain information on routes for return of evacuees and areas where reentry is restricted due to damage.
	2. Coordinate with EMA to obtain and release damage assessments to media, updating as additional information becomes available.
	3. Release information to media on return of evacuees and preferred reentry routes, if any.
	4. Release information to media on access controls for damaged areas, if any.
	5. Provide public information on safety precautions for entering damaged buildings and the need to document damage and contact insurance companies.
	6. Release information on disaster relief/recovery programs and facilities.
	7. Release information to media on termination of shelter operations
	8. Release information on debris removal activities.
	9. Release information on where to obtain disaster mental health/crisis counseling services.
	10. Release information on volunteer assistance for home cleanup and repair.

Tab D: Pre-Scripted Emergency Messages

Warning – General Incident

Cheyenne/Laramie County Emergency Management Agency has issued the following warning for those who live, work, or are visiting (location)_____.

An emergency situation involving (location)_____ is currently in progress at: *[Describe location by reference to facility name (if known), street and cross street, other geographic features (rivers, rail lines, etc.), and neighborhood name where appropriate]*

Emergency personnel are currently responding to this incident and local officials are monitoring the situation. To keep yourself safe and avoid impeding the emergency response, please avoid this area until further notice.

To repeat, an emergency situation involving (location) _____ is currently in progress at: *(Repeat location in 2 above)*. Please avoid this area.

Do not call 911 for information about the emergency situation. Instead, stay tuned to this (radio/TV) station for additional official information.

Cheyenne/Laramie County Emergency Operations Plan

Warning – Road/Facility Closure

Cheyenne/Laramie County Emergency Management Agency has issued the following warning for those who live, work, or are visiting (location)_____.

It has been necessary to close certain local streets and highways due to:

- Flooding
- Heavy accumulations of snow and ice
- Fire/explosion incident involving hazardous materials
- Other: _____

As of _____ today, the following roads have been closed by law enforcement officials:

- Street or Route at or Between _____
- Please avoid these routes _____

If you must travel, use alternate routes, such as: _____

We recommend that you refrain from driving and remain at home due to the extremely bad travel conditions.

In addition, the following facilities have been closed due to the emergency situation:

Again, the roads and streets that have been closed are:

- Street or Route at or Between _____
- Please avoid these routes _____

Please stay tuned to this station for additional information on the current emergency situation.

Cheyenne/Laramie County Emergency Operations Plan

Warning - Shelter-in-Place

Cheyenne/Laramie County Emergency Management Agency has issued the following warning for those who live, work, or are visiting (location)_____.

There has been an accidental release of hazardous material that is affecting a portion of the local area. People in the following area must take protective measures: *[Describe area boundaries]*

If you are located in this area, do the following immediately in order to protect yourself:

- Go inside your home, workplace, or the nearest building that appears to be reasonably air tight and stay there. Take your pets with you.
- Close all doors, windows, and any fireplace dampers.
- Turn off any heating or cooling system that draws in air from the outside.
- Keep your radio/TV on and tuned to a local station to receive emergency announcements and instructions
- Gather items that you may need to take with you if you are advised to evacuate.

People traveling in vehicles should seek shelter in the nearest air tight structure. If a suitable structure is not immediately available, travelers should roll up car windows, close air vents, and turn off the heater or air conditioner until they reach a suitable building.

If shelter is not immediately available, keep a handkerchief, towel, or damp cloth snugly over your nose and mouth until you get indoors.

(If school is in session)

Students at the following school(s) are taking shelter at their schools:

-
- Parents should not attempt to pick up students at school until the hazardous situation is resolved and they are advised it is safe to do so.

Students at the following school(s) [have been/are being] evacuated to other facilities:

-
- Parents should not attempt to pick up students from schools that have been evacuated.
 - Local officials will provide information on where to pick up school children as soon as it is available.

If you know of any neighbors or co-workers with hearing or language problems or special needs, please advise them of this message.

Please do not call 911 or local emergency officials for information. Stay tuned to this station for additional information.

Cheyenne/Laramie County Emergency Operations Plan

Special News Advisory – Pre-Evacuation

Cheyenne/Laramie County Emergency Management Agency has issued the following advisory for those who live, work, or are visiting (location)_____.

Due to the threat of [_____], it may be necessary for people who live, work or are visiting in the certain local areas to evacuate in the near future. This area(s) that may be at risk include: *[Describe area boundaries]*

Evacuation is **NOT** being recommended at this time. Local officials will advise you if evacuation is necessary. However, you should be prepared to evacuate if needed. To prepare, you should assemble the following emergency supplies:

- Clothing for your family for several days
- Bedding, pillows, and towels
- Prescription medicines & spare eyeglasses
- Soap and toiletries
- Baby food and diapers
- Your address book or list of important telephone numbers
- Your checkbook, credit cards, and cash
- Your Driver's License and identification cards
- A portable radio and flashlight.

You should also do the following:

- Gather suitcases, boxes, or bags to hold your emergency supplies.
- Be prepared to secure your home or office and your property before you depart.
- Ensure your car is in good shape and you have adequate fuel.
- Decide where you will go if you have to evacuate. Make arrangements with relatives or friends or consider making hotel or motel reservations.

Potential evacuation routes from the area(s) at risk include:

If you know of any neighbors or co-workers with hearing or language problems or special needs, please advise them of this message. Also, if you have neighbors or co-worker's who do not have transportation, offer to assist them if you can.

We want to emphasize that this is a PRECAUTIONARY message about possible evacuation. Evacuation is NOT being recommended at this time.

Keep your radio or TV on and listen for further information about this situation. Please do not call 911 or local emergency officials for information as this ties up telephone lines needed for emergency operations.

Cheyenne/Laramie County Emergency Operations Plan

Warning Message – Urgent Evacuation

Cheyenne/Laramie County Emergency Management Agency has issued the following warning for those who live, work, or are visiting (location)_____.

Due to [insert situation / threat _____] that [threatens/is affecting a portion of the local area, the (who) _____ recommend _____ that people in the following area evacuate immediately to protect their health and safety:

Area 1: _____

Evacuation Route: _____

Area 2: _____

Evacuation Route: _____

Area 3: _____

Evacuation Route: _____

Be sure to take essential items such as:

- Clothing for your family for several days
- Bedding, pillows, and towels for each family member
- Prescription medicines & spare eyeglasses
- Soap and toiletries
- Baby food and diapers
- Address book or list of important telephone numbers
- Checkbook, credit cards, and cash
- Driver's License and identification cards
- Portable radio and flashlight, with extra batteries

Do not delay your departure to collect other belongings.

Plan where you will stay until the emergency situation is resolved. Staying with relatives or friends or in a hotel or motel is a good choice.

If you cannot find another place to stay, temporary public shelters will be/have been opened at:

Location 1: _____

Location 2: _____

Location 3: _____

Take your pets with you, but make sure you bring a leash, crate, or cage for them as well as pet food. Some shelters may not accept pets.

Secure your property before you depart. Shut off all appliances, except refrigerators and freezers. Lock all doors and windows.

Expect travel delays on evacuation routes. If you have a substantial distance to drive, you may want to take drinks and ready-to-eat food in your car in case you are delayed.

If you have no means of transportation or if you are physically unable to evacuate on your own, ask a neighbor to assist you.

Cheyenne/Laramie County Emergency Operations Plan

If you know of any neighbors or co-workers with hearing or language problems or special needs, please advise them of this message. And if you have neighbors or co-workers who need help or do not have transportation, offer to assist them if you can.

Repeating, local officials recommend the people in the following area(s) evacuate now:

(Repeat the area to be evacuated)

If you know of any neighbors or co-workers with hearing or language problems or special needs, please advise them of this message.

If you have no means of transportation or if you are physically unable to evacuate on your own, ask a neighbor to help you.

If you have neighbors or co-workers, who need help or do not have transportation, offer to assist them if you can.

Please do not use your telephone except to report a true emergency. Stay tuned to this station for more information and instructions from local officials. If you missed some of the information in this advisory, it will be broadcast again soon.

Please do not use your telephone except to report a true emergency. Stay tuned to this station for more information and instructions from local officials. If at all possible, please use your cell phone only in case of an emergency.

If you missed some of the information in this advisory, it will be broadcast again soon.

Cheyenne/Laramie County Emergency Operations Plan

Special News Advisory – School & Public Facilities

Cheyenne/Laramie County Emergency Management Agency has issued the following advisory for those who live, work, or are visiting (location)_____.

The current emergency situation involving [_____] has affected the operation of a number of local facilities. This advisory is intended to provide you an update on the status of schools, hospitals, nursing homes, and other key facilities.

Schools

All local public schools have been closed (Public, Private or Head Start):

Name of School _____

Name of School _____

Name of School _____

Name of School _____

Name of School _____

The following schools have been evacuated and their students relocated to other facilities:

(Information should be given by school to the public.)

The following hospitals and nursing homes have been evacuated and their patients relocated to other facilities:

Facility Patients relocated to:_____

The following government offices, parks, recreation areas, and other public facilities have been closed:

Please stay tuned to this station for more information and instructions from local officials.

And please refrain from using the telephone unless you have a true emergency.

Support Annex 4 - Rapid Assessment

Purpose

The ability of Laramie County to perform a rapid situation assessment accurately and within the first few hours after an incident is critical to providing an adequate response to life-threatening situations and imminent hazards that may impact our County, and our cities. Rapid Assessment (RA) will allow government officials the ability to prioritize response activities, determine available resources, allocate resources, and request mutual aid and State and Federal assistance.

Scope

The scope of this annex is applicable to all County agencies and political subdivisions that may be involved in an incident. The purpose of RA is not to estimate the dollar value of the damage or the fine details. It is, rather, to assess the nature, magnitude and scope of the event so that the decision makers can assign the appropriate priorities to their response, utilizing the available resources most effectively, and requesting outside resources of the most appropriate types that are most needed.

To accomplish this important purpose, it is necessary to get information that is geared to disclose the type of damage that has occurred, where it has occurred, what resources are realistically available, and the transportation limitations and capabilities that will affect the response. Specifically, what roads are blocked, where, and by what? What utilities are functional and what utilities need to be shut down to protect life or property. Where is the largest number of victims trapped, in need of medical care, or in need of shelter? What significant buildings are damaged, and which may be available for sheltering.

Concept of Operations

The County's RA plan is designed to be used in a major event with massive damage. Under these circumstances, it must be anticipated that normal operations of the County and its usual priorities will be suspended in order to do the best for the most citizens in as little time as possible.

Any major event can be expected to seriously disrupt, if not totally curtail, telephone communications. Cellular service is dependent upon the landline telephone system in some measure. Additionally, cellular towers, and particularly interconnection microwave equipment, are subject to physical damage. Moreover, cellular service is at least as prone to overloading as is the basic landline service.

Although FEMA and other federal agencies will deploy people to begin damage assessment, it remains important for the local government and responders to have an accurate view of the extent of the incident.

Rapid assessment teams must be formed and deployed quickly to provide a picture of the event. Government workers, first responders and subject matter experts can provide the most accurate description of the event.

In a large scale event all government services can be impacted. By performing a rapid assessment, loss of life, damage to infrastructure and services can be assessed and informed decisions can be made as to the need of mutual aid, state assistance and federal assistance.

Responsibilities

The basic concept of Rapid Damage Assessment (RA) is to help determine a fairly accurate overview of the full extent and nature of the situation in order that the most beneficial and effective decisions can be made with regard to event priorities, deployment of available resources, and requesting of additional outside resources.

Every employee and every citizen has a role in RA. Each must first assess his or her personal situation and take whatever steps may be immediately necessary for their personal safety and that of those around them. In terms of the formal RA, the fire and police departments, together with the public services and public utilities departments, play the lead roles, with critical input from Community Resources (which include businesses, organizations, and volunteers).

There are several important uses of the information gathered in RA. Initially, the on-scene Incident Commander (IC) uses the information to make initial planning and strategy decisions. Once the EOC has been effectively activated and coordination and policy staff have gathered, they use the information gathered from the RA process to assess the situation, make policy determinations, and formulate effective and realistic goals. At all levels, relevant accurate information is essential for effective decision making.

Coordinator Responsibilities

The RA Coordinator is assigned by the Emergency Manager or CEO to complete the following assessments (Checklists are available in the Rapid Assessment Appendix):

- Life Safety Operations
- Status of Lifelines
- Status of Facilities
- Status of Imminent Hazards
- Descriptions of Major Problems by Sectors
- Resource Utilization and Requests for Assistance

Appendix A – Rapid Assessment Intelligence Categories

Rapid Assessment Intelligence Categories

The following is a list of categories for which rapid assessment information should be gathered:

1. Life Safety Operations (Search & Rescue, Deaths, Injuries, Evacuation)
 - a. _____ Number of people potentially affected by location
 - b. _____ Number of people dead
 - c. _____ Number of people injured
 - d. _____ Rough estimates of displaced persons
 - e. _____ Collapsed buildings requiring search and rescue
 - f. _____ Evacuation concerns (i.e. food, water, shelter)
2. Status of Lifelines (Transportation System, Communication System, Infrastructure System, Energy System)
 - a. _____ Transportation System
 - i. _____ Access points to the disaster area
 - ii. _____ Mass transit systems (bus, rail, underground)
 - iii. _____ Port facilities
 - iv. _____ Railroads
 - v. _____ Airports
 - vi. _____ Bridges and tunnels
 - vii. _____ Roadways (state, county, local)
 - viii. _____ Designated evacuation routes
 - b. _____ Communication System
 - i. _____ Local phone systems
 - ii. _____ Long distance phone service
 - iii. _____ Cellular phone system
 - iv. _____ Cable television
 - v. _____ Radio
 - c. _____ Other Systems
 - i. _____ Natural gas
 - ii. _____ Electric
 - iii. _____ Water
 - iv. _____ Sewer
3. Status of Facilities
 - a. _____ Operating Facilities (Survivable Crisis Management)
 - i. _____ Fire Stations
 - ii. _____ Police Stations
 - iii. _____ Government Complex(es)
 - iv. _____ EOC
 - v. _____ Public Works/Utilities Yards
 - vi. _____ Communications Centers (other dispatch centers)
 - b. _____ Television and Radio Stations
 - c. _____ Hospitals and Other Major Medical Facilities
 - d. _____ Mass Care Facilities
 - e. _____ Schools

Cheyenne/Laramie County Emergency Operations Plan

4. Status of Imminent Hazards
 - a. _____ Local weather conditions affecting operations
 - b. _____ Current or potential long-term health hazards
 - c. _____ Areas within the impacted area that can support response efforts
 - d. _____ Refinery/bulk storage/pipeline facilities
 - e. _____ Dams and levees
 - f. _____ Hazardous materials facilities
5. Descriptions of Major Problems By Sector
 - a. _____ Hazard-specific information
 - b. _____ Uncontrolled fires
6. Resource Utilization and Requests for Assistance
 - a. _____ Resource shortfalls (government)
 - b. _____ Status of local personnel and equipment
 - c. _____ Mutual Aid resource availability

Appendix B – Data Management Job Aids

KEY PERSONNEL CALL-UP LIST

INSTRUCTIONS: The Key Personnel Call-Up List is a list of key personnel at each agency in your community. Because these personnel are responsible for alerting their agencies' rapid assessment teams as soon as the rapid assessment plan is activated, it is critical that you have all information needed to contact them. Use the form below, or design one that meets your community's needs.

KEY PERSONNEL CALL-UP LIST							
Sector	Primary Contact	Telephone Number		Secondary Contact	Telephone Number		Time Contacted
		Pager Number	Pager Number				

Cheyenne/Laramie County Emergency Operations Plan

Sector Life Safety and Lifeline Status Checklist

Instructions: The Sector Life and Safety and Lifeline Status Checklist allows EOC personnel to provide updates at specific intervals on the health and well-being of residents in each sector of a community and to make determinations on resource allocation. To complete the form, enter numbers in the first five fields. Mark O (operational) or N (non-operational) next to categories under “Status of Lifelines” on the front of the form and next to those under “Transportation Systems” on the back. Provide a complete description for “Evacuations in progress” and route names or numbers under “Evacuation Routes Used.” Planners may alter the form to meet their community’s needs but should ensure that all sectors use the same form.

Facilities and Imminent Hazards Sector Status Worksheet

Instructions: This Worksheet is a form for recording information on the status of essential facilities and potential hazards in each sector at regular intervals. Complete the form when the EOC is activated and at the predetermined intervals by marking O (operational) or N (non-operational) next to each facility and writing a brief description if needed on a separate page.

RESOURCE ALLOCATIONS STATUS REPORT

INSTRUCTIONS: Use the Resource Allocation Status Report to make decisions on resource allocation and track allocated resources. To complete the Report, you will need to obtain information from several sources. You will find the control number, sector, and resources needed on Command Post Damage Assessment Reports. To determine the priority of each incident, review information under "Life Safety," "Lifelines," and "Essential Facilities" on each Command Post Damage Assessment Report. The EOC should provide other information required on the Report.

RESOURCE ALLICATION ROLL-UP

Instructions: Use the Situation Report Form to gather critical rapid assessment information needed to provide a comprehensive picture of your community. Under “Sector/Location,” enter a sector number and address, street names, or other location identifier. Mark the appropriate box under “Life Safety.” Write a facility name and make the box under “Damage Facilities” that indicates the damage level (H = Heavy, M = Medium, and L = Light). Write a description under “Imminent Hazards,” and provide the number and type of resources under “Initial Resources Deployed,” and “Additional Resources-Requested/Deployed.”

[illegible]

***Damaged Facilities:** H = Heavy; M = Moderate; L = Low

Support Annex 5 - Volunteer and Donations Management

Purpose

The Volunteer and Donations Management Support Annex describes the framework through which the EOC coordinates with other agencies and other jurisdictions, the private sector, volunteer organizations, and non-governmental organizations to ensure unsolicited donated goods and unaffiliated volunteers are effectively utilized during an Incident of Significance or emergency.

Scope

This support annex provides guidance on the jurisdictions' role in volunteer and donations management in an Incident of Significance. Any reference to donated goods and services in this annex refers to *unsolicited* goods and *unaffiliated* volunteer services. This guidance applies to all agencies with direct and indirect volunteer and/or donations responsibilities under the ERP.

Policies

The role of a government is always in support of the disaster area within its jurisdiction. Laramie County and all jurisdictions within, in coordination with ESF #6 coordinator(s) are in charge of volunteer and donations management. Laramie County has primary responsibility for the management of unsolicited goods and unaffiliated volunteers and will look principally to those voluntary organizations with established volunteer and donations management structures already in place to receive appropriate volunteers and donated goods.

Necessary response activities for the management of unsolicited goods and unaffiliated volunteers are closely coordinated with County officials, the EOC, appropriate ESFs, and voluntary agencies. Laramie County will encourage cash donations to recognized nonprofit voluntary organizations with disaster experience, and can set up an account for Laramie County Disaster Assistance.

Laramie County encourages individuals interested in volunteering their personal services to affiliate with a recognized nonprofit voluntary organization to facilitate their involvement in disaster relief activities.

All activities, functions, and services are provided without regard to economic status or racial, religious, political, ethnic, or other affiliation. All activities, functions, and services are also provided in accordance with existing State and County and municipal statutes, rules, and regulations. Full use of existing voluntary organization volunteer and donations management resources is encouraged before the assistance of the Federal or State governments is sought.

Concept of Operations

Volunteer and donations management response activities are often necessary during a disaster and hence require rapid coordination to mitigate potential volunteer and donations coordination problems.

Donated Goods Management Function

1. Management of unsolicited donated goods and unaffiliated volunteers involves a cooperative effort by County and local jurisdictions, EOC, ESFs, voluntary and community-based organizations, the business sector and the media.
2. Laramie County, the affected jurisdiction, in conjunction with their voluntary organization partners, and ESFs, are in charge of developing donations management plans and managing the flow of donated goods during disaster response and recovery operations.
3. Federal and State support may include:
 - a. Enhanced voluntary agency coordination.
 - b. Assistance in establishing a Donations Coordination Team and a Donation Coordination Center;
 - c. Technical and managerial support.
 - d. A national network of information and contacts to assist donations specialists in the field.
 - e. Communications support as necessary.

Volunteer Management Function

1. Management of unaffiliated volunteers requires a cooperative effort by Federal, State, and local governments, voluntary and community based organizations, faith groups, the private sector, and the media. The EOC, ESF #6, in close partnership with voluntary organizations, are in charge of developing plans that address the management of unaffiliated volunteers during disaster response and recovery.
2. Federal support provided may include:
 - a. Enhanced voluntary agency coordination;
 - b. Technical and managerial support;
 - c. A national network of information and contacts to assist volunteer management specialists working in the field and
 - d. Communications support as necessary.

Responsibilities

1. Volunteer and Donations Management Coordinator
 - a. Makes early contact with the key Volunteer & Donations Organizations within the County to assess Donations and Volunteer Management.
 - b. Provides donations program guidance, a Donations Coordinator, and other assistance as appropriate, based on the County's citizens need for assistance.
 - c. Provides support and assistance to the field, especially regarding large corporate offers, or politically sensitive collection drives.
 - d. Coordinates international offers of assistance with the appropriate Federal agencies.
 - e. Provides training in the preparedness period in Volunteer and Donations Management in providing technical assistance in the disaster response and recovery periods.
 - f. Provides legal forms for Volunteers and Donations Management activities.

Cheyenne/Laramie County Emergency Operations Plan

- g. Establishing a Volunteer & Donations Coordination Team to:
 - i. Set up a Volunteer & Donation Coordination Center, including a volunteer and donations hotline.
 - ii. Ensures the appropriate donations receiving and distribution facilities are established and operating effectively.
 - iii. Coordinates with the Joint Information Center (JIC) staff on public service announcements, press releases, and other media-related support
 - iv. Coordinates with the EOC, community relations, County and State Agencies and/or other agencies as necessary.
 - v. Prepares input for situation reports, briefings to the EOC and CEO.
 - h. Keeps Volunteer Waiver Records, Volunteer Training Records, and Time Records for all volunteers.
2. Voluntary Organizations Active in Disaster:
- a. Assist in providing information about donations and volunteer management operations of member agencies.

Cheyenne/Laramie County ERP – Planning Annexes

Introduction

The Planning Annex identifies specific plans within the ERP that may be utilized and followed during and after an emergency or a disaster. These plans describe, in specific detail, the operational systems, coordination, logistics, and response protocols specific to those specialties and incident specific events in accordance with the Cheyenne/Laramie County Emergency Response Plan. All plans should be based on the Incident Command structure described in the Base Plan.

These annexes are designed to be the major support system for the EOC. These planning annexes play an important part in the needs of the affected jurisdiction to provide logistics, coordination, documentation, and help provide additional support to the incident. Each plan is kept within its responsible agency's location and shared with agencies responsible with assisting in the implementation of the plan and available within the EOC for emergency use. The following pages summarize the supporting plans to this Emergency Response Plan but are not kept within this document due to size. Copies of the plans can be found at each responsible agency's office and at the EOC.

- Cheyenne/Laramie County Snow Plan
- Cheyenne/Laramie County Sheltering Plan
- Laramie County Tactical Interoperable Communications Plan (TICP)
- Laramie County Cyber Security Plan
- Cheyenne/Laramie County Wild Fire Protection Plan
- Wyoming Region 7 Hazard Mitigation Plan
- Cheyenne/Laramie County Debris Management Plan
- Cheyenne/Laramie County Distribution Management Plan
- Cheyenne – Laramie County Health Department All Hazards Emergency Operations Plan
- Laramie County Coroner – Fatalities Management Operations Plan
- Wildland Fire Management Annual Operating Plan
- BOPU Dams and Reservoirs Emergency Action Plan

Planning Annex 1 - Cheyenne/Laramie County Snow Plan

Responsible Agency of Plan: Cheyenne/Laramie County Emergency Management Agency

Primary Location of Plan: Cheyenne/Laramie County Emergency Management Agency, EOC, Elected Officials, Supporting Agencies

This annex outlines the response by local government to severe winter weather conditions affecting the operations of government offices. The plan outlines late openings/delayed start, early closure and full closures of government offices. The plan also provides safety information about winter weather hazards and information you may need to survive severe winter weather. This plan affects the City of Cheyenne and Laramie County.

This plan prioritizes safety. It can be implemented by both public and private organizations. The plan is a coordinated process between agencies to assess threatening weather and allow employees and citizens to determine the safest response to inclement weather.

Planning Annex 2 - Cheyenne/Laramie County Sheltering Plan

Responsible Agency of Plan: Cheyenne/Laramie County Emergency Management Agency

Primary Location of Plan: Cheyenne/Laramie County Emergency Management Agency, EOC, American Red Cross

The Cheyenne/Laramie County Sheltering Plan is a co-written plan based on the response to sheltering needs within Laramie County under ESF #6, Mass Care Emergency Assistance, Temporary House, and Human Services. The purpose of this plan is to utilize pre-determined sheltering locations based on the needs of the community at the time of the event. The American Red Cross and CLCEMA work together to determine which location is best for the event and resources, to include volunteers, needed for sheltering.

Planning Annex 3 - Laramie County Tactical Interoperable Communications Plan (TICP)

Responsible Agency of Plan: Cheyenne/Laramie County Combined Communications Center, Cheyenne/Laramie County Emergency Management Agency

Primary Location of Plan: Cheyenne/Laramie County Combined Communications Center, Cheyenne/Laramie County Emergency Management Agency

This document established a Tactical Interoperable Communications (TIC) Plan for Laramie County, WY. The TIC Plan is intended to document the interoperable communications resources that are available within the jurisdiction, who controls each resource, and what rules of use or operational procedures exist for the activation and deactivation of each resource.

This TIC Plan is intended to apply to the jurisdiction, as defined above. Specifically, the plan is intended for the first responder disciplines that would respond to the scene of an emergency, as well as other disciplines that would need to be coordinated with during the response. These include but are not limited to:

- Law Enforcement
- Fire Service
- Emergency Medical Services
- HazMat
- Public Safety Communications
- Emergency Management
- Public Works
- Public Health
- Government Administration
- Transportation
- Health Care

Planning Annex 4 - Laramie County Cyber Security Plan

Responsible Agency of Plan: Laramie County Information Technology

Primary Location of Plan: Laramie County Information Technology, Cheyenne/Laramie County Emergency Management Agency

Laramie County has a large internal network comprised of many different departments. All departments have different network requirements. It is the job of I.T. to maintain the security of all the systems that the many departments use. Network security includes Authorization, Internal Networks, Cloud Based Services, WIFI, Data Encryption, Application Updates, Web Browsing, Remote Access, Vendor access.

Laramie County's IT Systems are available to users and connected processors that have been granted access to those resources. Authorization mechanisms are used to allow, deny or limit access to IT Systems. Authorization is: based on a unique user authentication as; granted for data access with read, write, update rights, etc., depending on the authority given to the user or the connected processor; or granted on the basis of classification regarding the confidentiality, availability and integrity of the data to be accessed. Authorization is required to use IT Systems such as systems (computers), applications (e.g. word processing), functions (e.g. create account), data (e.g. contents of a memo).

Planning Annex 5 - Cheyenne/Laramie Wild Fire Protection Plan

Responsible Agency of Plan: Cheyenne/Laramie County Emergency Management Agency, Laramie County Fire Warden

Primary Location of Plan: Cheyenne/Laramie County Emergency Management Agency, Laramie County Fire Warden, Laramie County Fire Districts

This document has been prepared to assist Laramie County residents, local government, emergency responders and land management agencies in responding to national and state wildfire management direction and in achieving the following goals:

1. Protect the lives of residents and emergency personnel.
2. Protect property and critical infrastructure in the Wildland Urban Interface.
3. Protect key environmental values and quality of life.

To those ends, the objectives of the CWPP are to:

1. Provide a comprehensive review of the existing community risks of wildfire using best available data and current methodology to validate identified risk areas.
2. Recognize the mitigative actions that have been taken or are underway in the communities in the Plan area.
3. Achieve collaboration by bringing together diverse local, state and federal interests to identify essential community values; discuss mutual concerns for public safety, community sustainability; and natural resource protection.
4. Share information from the community assessments with private landowners, public land managers, the Fire Warden and Fire Protection Districts, and Public Safety Officers to reduce damage to the values identified as at risk.
5. Foster coordination between all the stakeholders in the Plan area.
6. Assist in obtaining eligibility for funding and other assistance from State and Federal agencies for wildfire mitigation, appropriate equipment and training.

Planning Annex 6 - Wyoming Region 7 Hazard Mitigation Plan

Responsible Agency of Plan: Cheyenne/Laramie County Emergency Management Agency, Goshen County Emergency Management, Platte County Emergency Management, Wyoming Office of Homeland Security

Primary Location of Plan: Cheyenne/Laramie County Emergency Management Agency, Goshen County Emergency Management, Platte County Emergency Management, Wyoming Office of Homeland Security, City of Cheyenne and Laramie County Planning & Development offices

The State of Wyoming's Office of Homeland Security (WOHS) coordinated with Wyoming Region 7 Counties to create a cross-regional Hazard Mitigation Plan (HMP). The purpose of the HMP is to help plan for and implement hazard mitigation projects and activities, with the goal of reducing or eliminating losses from future hazard events. The counties of Laramie, Goshen, and Platte, and with their respective jurisdictions and communities, led these efforts to conduct local hazard assessment and analysis. Their efforts have demonstrated a commitment and perseverance to mitigating future risk. This plan will be used as a tool for Region 7 communities to guide resiliency and help decision makers' direct mitigation activities. This HMP was also developed in order to meet requirements set forth by the Federal Emergency Management Agency (FEMA), so that communities are eligible for various disaster assistance funding opportunities. This plan will be updated and maintained in order to address the natural hazards addressed in the Plan.

Planning Annex 7 - Cheyenne/Laramie County Debris Management

Responsible Agency of Plan: Cheyenne/Laramie County Emergency Management Agency

Primary Location of Plan: Cheyenne/Laramie County Emergency Management Agency, Laramie County Public Works, City of Cheyenne Public Works

THIS PLAN IS CURRENTLY UNDER DEVELOPMENT

The Debris Management Plan recognize natural and human-caused disasters which have the potential to create debris that can disrupt the quality of life for citizens, and complicate disaster response and recovery following such disasters. Planning for such disasters can lessen the impact on the community, economy, and the environment. Therefore, Laramie County is currently developing this plan to facilitate a rapid response and recovery to debris causing incidents.

Planning Annex 8 - Cheyenne/Laramie County Distribution

Responsible Agency of Plan: Cheyenne/Laramie County Emergency Management Agency

Primary Location of Plan: Cheyenne/Laramie County Emergency Management

THIS PLAN IS CURRENTLY UNDER DEVELOPMENT

A Distribution Management Plan establishes strategies, functional plans, and tactical guidance for logistical response operations. This plan covers staging sites and operations, logistical support including services and personnel, information management, transportation of resources to point of need, commodity points of distribution (C-PODs), inventory management, resource sourcing, and demobilization. A Distribution Management Plan includes sections with information on the following seven components: Requirement Defining, Resource Ordering, Distribution Methods, Inventory Management, Transportation, Staging, and Demobilization.

Planning Annex 9 - Cheyenne-Laramie County Health Department All Hazards Emergency Operations Plan

Responsible Agency of Plan: Cheyenne - Laramie County Health Department

Primary Location of Plan: Cheyenne - Laramie County Health Department, Laramie County EOC, Cheyenne/Laramie County Emergency Management Agency

The purpose of the All Hazards Emergency Operations Plan (EOP) is to describe the response of the Cheyenne-Laramie County Health Department to a public health emergency. This includes the preparation and planning before an event and the efforts during an event to minimize, as much as possible, the impact on the public health and safety of Laramie County. A public health emergency, in the context of the EOP, is defined as, but is not limited to: a natural disaster or a disease that threatens a Cheyenne-Laramie County Health Department activity and/or facility, that threatens the health of Laramie County citizens, or that exhausts the capabilities of a community's medical infrastructure; the appearance of an unusual or of a previously controlled or eradicated infectious agent or biological toxin; OR a man-made disaster (may be intentional or accidental).

Planning Annex 10 - Laramie County Coroner Fatalities Operational Response Plan

Responsible Agency of Plan: Laramie County Coroner

Primary Location of Plan: Laramie County Coroner's Office, Laramie County EOC, Cheyenne/Laramie County Emergency Management Agency

The purpose of this plan is to coordinate the operational response of the jurisdictional members of Laramie County, Wyoming in the event of a mass fatalities incident. This Fatalities Management Operational Response Plan will address the mortuary surge capacity issues and provide methods to respond to and mitigate such issues.

The focus of this plan will be to identify methods through which the Coroner within Laramie County may obtain support assets to accomplish the goals of identifying the deceased and arranging proper final disposition. This plan should not be considered all inclusive, but rather presents major categories of service response that must be adapted to the nature of disasters ranging from natural, man-made or technological.

Planning Annex 11 - Wildland Fire Management Annual Operating

Responsible Agency of Plan: Wyoming State Forestry Division

Primary Location of Plan: Laramie County Fire Warden, Laramie County Fire Districts, Cheyenne/Laramie County Emergency Management Agency

This operating plan is a Sub-Geographic Area Annual Operating Plan (AOP) meant to address issues affecting cooperation, interagency working relationships and protocols, financial arrangements, and joint activities across the State of Wyoming. The AOP details operating procedures applicable across the State and those applicable to specific districts. Procedures applicable to specific districts are included within the attachments tied to the plan and District Specific Procedures, which are incorporated herein by this reference. Signatories to the AOP agree to procedures applicable across the State and to those applicable to their specific district.

Planning Annex 12 - Board of Public Utilities Dams and Reservoirs Emergency Actions Plans

Responsible Agency of Plan: Cheyenne Board of Public Utilities

Primary Location of Plan: Cheyenne Board of Public Utilities, Cheyenne/Laramie County Emergency Management Agency

The possibility of dam failure affecting Laramie County is extremely small however, if one were to fail, it would be a catastrophic event. Documented dam failures have demonstrated the short period of time it takes for a dam to breach. The large and uncontrolled release of water resulting from dam failure would be very destructive. Other dam safety issues could arise and lead to catastrophic events, too. The purpose of this Emergency Action Plan (EAP) is to establish a procedure to notify authorities of potential danger so that people may be smoothly and quickly moved to safety. This EAP pertains to the resulting water release that could occur from the possible dam failures and other dam safety issues that might occur. It describes the actions necessary to accomplish the warning and evacuation of the areas that would be inundated. It establishes a course of action for certain key personnel so that they can guide the actions of others.
